FOR AVISTA CORPORATION

(ELECTRIC AND NATURAL GAS)

1 I. INTRODUCTION

2 **Q. Please state your name, business address, and**
3 **present position with Avista Corp.**

4 A. My name is Mark Thies. My business address is
5 1411 East Mission Avenue, Spokane, Washington. I am
6 employed by Avista Corporation as Senior Vice President and
7 Chief Financial Officer.

8 **Q. Would you please describe your education and**
9 **business experience?**

10 A. I received Bachelor of Arts degrees in Accounting
11 and Business Administration from Saint Ambrose College in
12 Davenport, Iowa, and became a Certified Public Accountant
13 in 1987. I have extensive experience in finance, risk
14 management, accounting and administration within the
15 utility sector, primarily in the Midwest.

16 I joined Avista in September of 2008 as Senior Vice
17 President and Chief Financial Officer (CFO). Prior to
18 joining Avista, I was Executive Vice President and CFO for
19 Black Hills Corporation, a diversified energy company,
20 providing regulated electric and natural gas service to
21 areas of South Dakota, Wyoming and Montana. I joined Black
22 Hills Corporation in 1997 upon leaving InterCoast Energy
23 Company in Des Moines, Iowa, where I was the manager of
24 accounting. Previous to that I was a senior auditor for
25 Arthur Anderson & Co. in Chicago, Illinois.

Thies, Direct 1
Avista Corporation

1 **Q. What is the scope of your testimony in this**
2 **proceeding?**

3 A. I will provide a financial overview of the
4 Company and will explain the overall rate of return
5 proposed by the Company in this filing for its electric and
6 natural gas operations. The proposed rate of return is
7 derived from Avista's long-term cost of debt and common
8 equity, weighted in proportion to the proposed capital
9 structure.

10 I will address the proposed capital structure, as well
11 as the proposed cost of debt and equity in this filing.
12 Company witness Dr. Avera will provide additional testimony
13 related to the appropriate return on equity for Avista,
14 based on the specific circumstances of the Company,
15 together with the current state of the financial markets.

16 In brief, I will provide information that shows:

- 17 • Avista's plans call for significant capital
18 expenditure requirements for the utility over the
19 next two years to assure reliability in serving
20 growth in the number of customers and customer
21 demand. Capital expenditures of approximately
22 \$420 million are planned for 2009-2010 for
23 customer growth, investment in generation,
24 transmission and distribution facilities for the
25 electric utility business as well as necessary
26 maintenance and replacements of our natural gas
27 utility systems. Avista needs adequate cash flow
28 from operations to fund these requirements,
29 together with access to capital from external
30 sources under reasonable terms.
31
- 32 • Avista's corporate credit rating from Standard &
33 Poor's is currently BBB- and Baa3 from Moody's.
34 Avista Utilities needs to operate at a level that

Thies, Direct 2
Avista Corporation

1 will support a strong investment grade corporate
2 credit rating, meaning "BBB" or "BBB+", in order
3 to access capital markets at reasonable rates,
4 which will decrease long-term costs to customers.
5 Maintaining solid credit metrics and credit
6 ratings will also help support a stock price
7 necessary to issue equity to fund capital
8 requirements.
9

- 10 • The Company has proposed an overall rate of
11 return of 8.80%, including a 50.00% equity ratio
12 and an 11.0% return on equity. We believe the
13 11.0% provides a reasonable balance of the
14 competing objectives of continuing to improve our
15 financial health, and the impacts that increased
16 rates have on our customers.
17

18 The Company's initiatives to carefully manage its
19 operating costs and capital expenditures are an important
20 part of improving performance, but are not sufficient
21 without revenues from the general rate request for our
22 electric and natural gas businesses in these cases.
23 Certainty of cash flows from operations can only be
24 achieved with the continued support of regulators in
25 allowing the timely recovery of costs and the ability to
26 earn a fair return on investment.

27 Finally, I will provide testimony concerning the
28 Company's pension expense and its proposal for a balancing
29 account with respect to annual dollar differences between
30 cash payments and pension expense.

1 A table of contents for my testimony is as follows:

2	<u>Description</u>	<u>Page</u>
3	I. Introduction	1
4	II. Financial Overview	4
5	III. Credit Ratings	13
6	IV. Cash Flow	27
7	V. Capital Structure	36
8	VI. Cost of Debt	37
9	VII. Cost of Common Equity	37
10	VIII. Increase in Pension Expense	40
11		

12 **Q. Are you sponsoring any exhibits with your direct**
13 **testimony?**

14 A. Yes. I am sponsoring Exhibit No. 2, Schedules 1
15 and 2, which were prepared under my direction. Avista's
16 credit ratings by the three principal rating agencies are
17 summarized on Schedule 1, and Avista's actual capital
18 structure at December 31, 2008 and pro forma capital
19 structure at June 30, 2009 are included on Schedule 2, page
20 1, with supporting information on pages 2 through 3.

21

22 **II. FINANCIAL OVERVIEW**

23 **Q. Please provide an overview of Avista's financial**
24 **situation.**

25 A. The Company has made solid progress in improving
26 its financial health in recent years, as demonstrated by
27 improved financial ratios. Avista has reduced investments
28 in unregulated subsidiaries and redeployed the majority of
29 the proceeds from the sales of the unregulated subsidiaries
30 to the Utility. The Company has been able to improve its

1 debt ratio and balance the overall debt / equity ratio by
2 paying down debt, issuing additional common stock, and
3 through additional retained earnings. Although we have
4 made progress in improving the Company's financial
5 condition, we are still not as strong as we need to be
6 given the current unrest in capital markets, which may
7 continue for some time.

8 Avista's goal is to operate at a level that will
9 support a strong corporate credit rating of BBB / BBB+, and
10 move away from the "cliff" of the investment grade rating
11 scale. Operating at a higher rating will help reduce long-
12 term costs to customers. It will also reduce collateral
13 requirements and allow us to maintain access to more
14 counterparties for acquisition of natural gas and
15 electricity. We expect that a continued focus on the
16 regulated utility, conservative financing strategies
17 (including the issuance of common equity) and a continued
18 supportive regulatory environment will contribute to an
19 overall improved financial situation, that will allow us to
20 move up from the current BBB- rating.

21 **Q. What additional steps is the Company taking to**
22 **improve its financial health?**

23 A. We are working to assure we have adequate funds
24 for operations, capital expenditures and debt maturities.
25 We recently acquired a new \$200 million 364-day line of
26 credit from our banks at reasonable rates that has allowed

1 us to avoid the debt capital markets at a volatile time
2 when rates are very high. In December 2008, we also
3 obtained a \$30 million private placement of five-year debt
4 at favorable rates as compared to the public markets.

5 We are maintaining our original \$320 million line of
6 credit, which will expire in April 2011, as well as our
7 Accounts Receivable Sales program. The Company plans to
8 obtain a portion of our capital requirements through equity
9 issuance. We also maintain an ongoing dialogue with the
10 rating agencies regarding the measures taken by the Company
11 to improve our credit rating.

12 Additionally, the Company is working through
13 regulatory processes to recover our costs in a timely
14 manner so that earned returns are closer to those allowed
15 by regulators in each of the states we serve. This is one
16 of the key determinants from the rating agencies'
17 standpoint when they are reviewing our overall credit
18 standing.

19 **Q. In addition to having credit ratings that will**
20 **allow Avista to attract debt capital under reasonable**
21 **terms, is it also necessary to attract capital from equity**
22 **investors?**

23 A. It is absolutely essential. Avista has two
24 primary sources of external capital - debt lenders and
25 equity investors. Avista currently has approximately \$2.0
26 billion of net investment in place to serve its customers.

Thies, Direct 6
Avista Corporation

1 Approximately half of that investment is funded by debt
2 holders, and half is funded by equity investors.
3 Therefore, even though there tends to be a lot of emphasis
4 on maintaining credit metrics and credit ratings that will
5 provide access to debt capital under reasonable terms,
6 access to equity capital is equally important.

7 Additional equity capital generally comes in two forms
8 - retained earnings and new equity issuances. Retained
9 earnings represent the annual earnings (return on equity)
10 of the Company that is not paid out to investors in
11 dividends. The retained earnings are reinvested by the
12 Company in utility plant, and other capital requirements,
13 to serve customers, which avoids the need to issue new
14 debt. Occasionally it is necessary to issue new common
15 stock to maintain the proper balance of debt and equity in
16 the capital structure, which allows Avista access to both
17 debt and equity markets under reasonable terms, on a
18 sustainable basis. Because of the large capital
19 requirements at Avista in the near-term, it is imperative
20 that Avista have ready-access to both the debt and equity
21 markets at reasonable costs.

22 **Q. Are the debt and equity capital markets a**
23 **competitive market?**

24 A. Yes. Our ability to attract new capital,
25 especially equity capital, under reasonable terms is
26 dependent on our ability to offer a risk/reward opportunity

Thies, Direct 7
Avista Corporation

1 that is better than the equity investors' other
2 alternatives. We are competing with not only other
3 utilities, but businesses in other sectors of the economy.
4 As an example, if an equity investor believes, or
5 perceives, that the risk/reward opportunity is better with
6 WalMart than with Avista, or the utility industry in
7 general, the investor will put the equity dollars in
8 WalMart stock. Demand for the stock supports the stock
9 price, which provides the opportunity to issue additional
10 stock under reasonable terms to fund capital investment
11 requirements.

12 To the extent that the equity investor holds a
13 diversified portfolio of companies that includes utilities
14 and other energy companies, we would be competing with
15 those companies to attract those equity dollars.

16 In the debt markets, utilities are the third largest
17 issuers, right behind governments and financial services.
18 Therefore, it is a very competitive market and the Company
19 must be able to attract debt investors as well as equity
20 investors.

21 **Q. What is Avista doing to attract equity**
22 **investment?**

23 A. Avista is carrying a capital structure that
24 provides the opportunity to have financial metrics that
25 offer a risk/reward proposition that is competitive and/or
26 attractive for equity holders.

1 We have increased our dividend for common
2 shareholders, and have publicly stated that we intend to
3 work toward a dividend payout ratio that is comparable to
4 other utilities in the industry. This is an essential
5 element in providing a competitive risk/reward opportunity
6 for equity investors.

7 We are operating the business efficiently to keep
8 costs as low as practicable for our customers, while at the
9 same time ensuring that our energy service is reliable, and
10 results in a high level of customer satisfaction. An
11 efficient, well-run business is not only important to our
12 customers, but also to investors.

13 We are employing tracking mechanisms such as the PCA
14 and PGA, approved by the regulatory commissions, to balance
15 the risk of owning and operating the business in a manner
16 that places us in a position to offer a risk/reward
17 opportunity that is competitive with not only other
18 utilities, but with businesses in other sectors of the
19 economy.

20 We are seeking rate relief to provide timely recovery
21 of costs and earned returns closer to those allowed by
22 regulators. If we are not able to achieve a reasonable,
23 actual, earned return on our equity investment, we will not
24 be able to attract equity dollars that are absolutely
25 necessary to support this business going forward.

1 Dr. Avera provides additional testimony related to the
2 appropriate return on equity for Avista, that would allow
3 the Company access to equity capital under reasonable
4 terms, and on a sustainable basis.

5 **Q. Do you believe there are misconceptions about the**
6 **earnings of the Company related to the equity investment in**
7 **the Company?**

8 A. Yes I do. I believe some of our customers
9 believe that the earnings of the Company that we report
10 publicly each quarter are "profits" that are over and above
11 the dollars necessary to own and operate the utility, which
12 we know is simply not true. Just as we must pay interest
13 to debt holders in exchange for the use of their dollars,
14 we must also provide a return on investment for the equity
15 holder, or the equity holder will take his or her dollars
16 somewhere else.

17 I believe some do not understand that the quarterly
18 earnings or profits are the return or "interest" to the
19 shareholder, and without it we would not have the funds
20 necessary to run the business - i.e., it is, in fact, one
21 of the essential costs of owning and operating the
22 business.

23 **Q. After Avista reported its earnings for the Second**
24 **Quarter (Q2) of 2008, it was reported in the Spokesman**
25 **Review newspaper that "Avista Quarterly Profits Soar." Did**

1 **Avista's earnings for Q2 of 2008 exceed those authorized by**
2 **this Commission?**

3 A. No. While earnings from utility operations did
4 improve some for Q2 2008 versus the prior year, the primary
5 reason for the improvement was that Avista Corp completed
6 the sale of Avista Energy during Q2 2007, and recorded a
7 large loss in Q2 2007 related to the operations of that
8 business. The absence of the loss in 2008, resulted in a
9 substantial improvement in reported earnings in Q2 of 2008.

10 **Q. What do the quarterly and annual earnings**
11 **reported by Avista tell us about the earned return for**
12 **equity holders for 2008?**

13 A. Although actual earnings for the calendar year
14 2008 have not yet been released, Avista has previously
15 provided "guidance" for the expected earnings for the year.
16 The current earnings guidance for Avista Utilities for 2008
17 is the range of \$1.20 to \$1.35 per common share. At
18 September 30, 2008 Avista had approximately 54.0 million
19 common shares outstanding, and an equity investment in the
20 utility of \$904 million, per our third-quarter 10-Q filed
21 with the Securities and Exchange Commission. If we were to
22 assume that Avista will see earnings in the middle of the
23 earnings guidance, at \$1.28/share, it would result in a
24 return on investment for equity holders of 7.6%. By
25 comparison, the currently authorized return on equity in
26 Idaho for Avista is 10.20%. Therefore, during 2008 we

Thies, Direct 11
Avista Corporation

1 expect to earn substantially less than what we were
2 authorized to earn by the IPUC, i.e., we will not recover
3 our costs of providing service to customers, including a
4 competitive return to equity holders.

5 If we continue to fall short, it will threaten our
6 ability to obtain financing from debt and equity holders
7 under reasonable terms.

8 **Q. What is the Company expecting to earn in 2009?**

9 A. We received additional rate relief in all three
10 states where we do business during 2008 (January 1, 2009
11 for Washington). While this provides additional cost
12 recovery, we are also continuing to experience increases in
13 costs, and increased capital investment requirements. As
14 an example, our most recent rate case in Idaho included
15 recovery of new capital investment through December 31,
16 2008, but none for 2009. What that means is, we are not
17 recovering the costs associated with the new capital
18 investment we have already made in 2009, and will continue
19 to make, until the conclusion of this rate case in mid-
20 2009.

21 Furthermore, if we do not reflect in retail rates the
22 cost of future capital that will be serving customers
23 during the period that retail rates are in place from this
24 case, we will continue to earn a lower return than what we
25 are authorized to earn.

1 We have previously announced that we expect Avista's
2 utility earnings for 2009 to be in the range of \$1.30 to
3 \$1.45 per share. If we again use the middle of the range
4 (\$1.38/share) for illustrative purposes, 54.0 million
5 shares outstanding, and \$1.0 billion of equity investment,
6 it would result in an earned return for 2009 of 7.5%, again
7 well below the authorized return of 10.2%.

8 As we process this rate filing, it is imperative that
9 we work toward recovery of the costs to provide service to
10 customers, and a meaningful opportunity to earn a return
11 closer to the allowed return, so that we can have access to
12 debt and equity capital under reasonable terms.

13

14

III. CREDIT RATINGS

15 **Q. How important are credit ratings for Avista?**

16 A. Utilities need ready access to capital markets in
17 all types of economic environments. I believe few, if any,
18 would have predicted the kind of financial markets we have
19 experienced the past few months. The nature of our
20 business with long-term capital projects, our obligation to
21 serve, and the potential for high volatility in fuel and
22 purchased power markets, necessitates the ability to tap
23 the financial markets under reasonable terms on a regular
24 basis.

25 In these past few months we have seen ample evidence
26 of the benefit of having a higher credit rating. As an

Thies, Direct 13
Avista Corporation

1 example, in December, 2008, El Paso Electric, a BB credit,
2 issued bonds at an effective cost of 15%.

3 In the fall of 2008 we had planned to issue an
4 additional \$100 million of long-term debt. In April 2008
5 we issued \$250 million of 10-year debt at 5.95%. In the
6 fall of 2008, however, because of the unrest in the
7 financial markets, there were times when we could not issue
8 debt at any interest rate, and when it was available, the
9 all-in interest rates were 9.5% or higher. Fortunately, we
10 were able to negotiate the acquisition of an additional
11 credit line of \$200 million for a period of 364 days, under
12 favorable terms, and avoid issuing new long-term debt at
13 these high rates - at least for now. We believe that
14 financial markets will be more stable as we move toward the
15 later part of 2009, and our financial circumstances will be
16 such that we will have access to new long-term debt at
17 reasonable rates.

18 **Q. Yields on US Treasuries have decreased**
19 **significantly over the past several months. Why have**
20 **interest rates for utility bonds gone up?**

21 A. Although it is true that the yield on US
22 Treasuries has declined, the interest rate spreads between
23 utility bonds and Treasuries that debt holders are
24 demanding have increased dramatically due to the unrest in
25 the financial system and the economy. The following graph
26 illustrates the dramatic rise in the gap during 2008

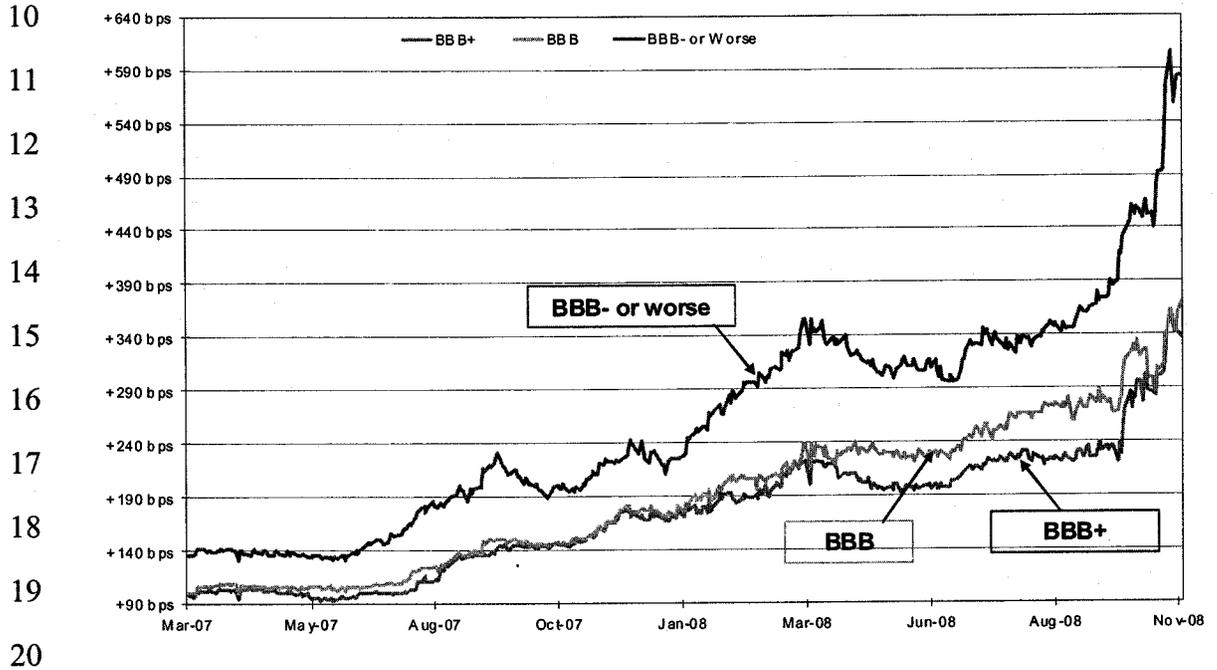

1 between the yields on Treasuries and utility bonds rated
2 BBB+, BBB, and BBB- or below. The graph also illustrates
3 the significantly higher cost of debt for companies at or
4 below the lowest rung of the investment grade ladder (BBB-
5 or below), versus a credit rating of BBB, only one step
6 higher than Avista's current rating of BBB-.

7

8 **Illustration No. 1:**

9

Average Utility Bond Spread to U.S. Treasury

21 **Q. Please explain the credit ratings for Avista's**
22 **debt securities.**

23 A. Rating agencies are independent agencies that
24 assess risks for investors. The three most widely
25 recognized rating agencies are Standard & Poor's (S&P),
26 Moody's Investors Service (Moody's) and FitchRatings

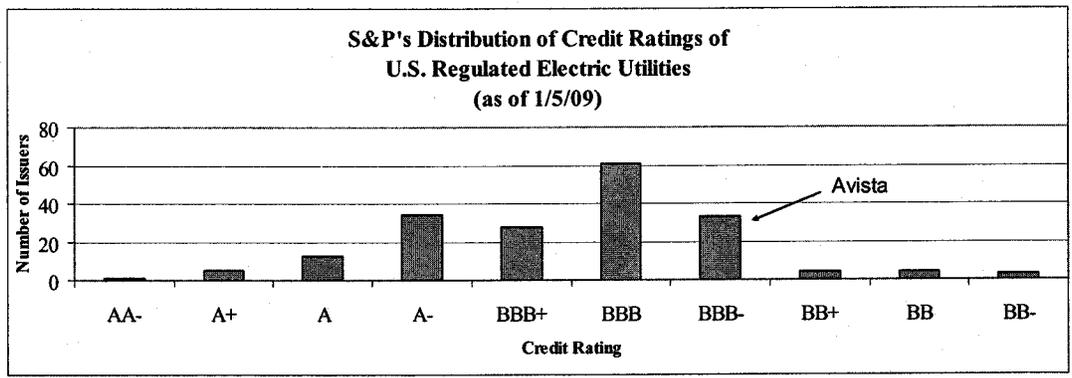

1 (Fitch). These rating agencies assign a credit rating to
2 companies and their securities so investors can more easily
3 understand the risks associated with investing in their
4 debt and preferred stock. Avista's credit ratings by the
5 three principal rating agencies are summarized on page 1 of
6 Exhibit No. 2. Additionally, the following rating actions
7 occurred during 2007 and 2008:

- 8 a. S&P upgraded Avista's corporate credit rating to
9 BBB- from BB+ (February 2008) and Avista's secured
10 debt rating to BBB+ from BBB- (September 2007 and
11 affirmed in September 2008).
- 12 b. Moody's upgraded Avista's corporate credit rating
13 to Baa3 from Ba1 and Avista's secured rating to
14 Baa2 from Baa3 (December 2007).
- 15 c. Fitch upgraded Avista's long-term issuer default
16 rating to BB+ from BB and its secured debt rating
17 to BBB from BBB- (August 2007 and affirmed in
18 February 2008).

19 As shown in Illustration No. 2 below, Avista is on the
20 lowest rung of the investment grade credit rating scale.
21 As I noted earlier, I believe it is important that we move
22 up the scale to at least a BBB or BBB+, so that we are not
23 on the edge of the investment grade cliff.

Illustration No. 2:

Q. Please explain the implications of the credit ratings in terms of the Company's ability to access financial markets.

A. Credit ratings impact investor demand and expected return. More specifically, when the company issues debt, the credit rating helps determine the interest rate at which the debt will be issued. The credit rating also determines the type of investor who will be interested in purchasing the debt. For each type of investment a potential investor could make, the investor looks at the quality of that investment in terms of the risk they are taking and the priority they would have in the event that the organization experiences severe financial stress. Investment risks include the likelihood that a company will not meet all of its debt obligations in terms of timeliness and amounts owed for principal and interest. Secured debt receives the highest ratings and priority for repayment and, hence, has the lowest relative risk. In challenging credit markets, where investors are less likely to buy

1 corporate bonds, a higher credit rating will attract more
2 investors, and a lower credit rating could shrink or
3 eliminate the number of potential investors. Thus, lower
4 credit ratings may result in a company having more
5 difficulty accessing financial markets and/or incur
6 significantly higher financing costs.

7 **Q. What credit rating does Avista Corporation**
8 **believe is appropriate?**

9 A. The move to investment grade for Avista Corp last
10 year was a significant step in improving the ability to
11 access capital at a reasonable cost. However, a credit
12 rating at the bottom of investment grade is not appropriate
13 for Avista. In adverse conditions - whether unique to
14 Avista or by all market participants - a downgrade from
15 BBB- (investment grade) to BB+ (high-yield) is
16 significantly harder to overcome than a downgrade from BBB
17 to BBB-. As Avista experienced, it took approximately six
18 years for the Company to regain its investment grade rating
19 from S&P after it was downgraded during the energy crisis.
20 The difference between investment grade and non-investment
21 grade is not only a matter of debt pricing, it can be a
22 matter of any access at all. During the period from mid-
23 September to mid-December, the credit markets were
24 essentially closed to non-investment grade issuers. In
25 order to be able to weather a potential downgrade, Avista
26 Utilities should operate at a level that will support a

Thies, Direct 18
Avista Corporation

1 strong corporate investment grade credit rating, meaning a
2 "BBB" or an "BBB+," using S&P's rating scale.

3 A solid investment grade credit rating would also
4 allow the Company to post less collateral with
5 counterparties than would otherwise be required with a
6 lower credit rating. This results in lower costs. It also
7 increases financial flexibility since the credit line
8 capacity would not be reduced for outstanding letters of
9 credit.

10 Financially healthy utilities have lower financing
11 costs which, in turn, benefit customers. In addition,
12 financially healthy utilities are better able to invest in
13 the needed infrastructure over time to serve their
14 customers, and to withstand the challenges and risks facing
15 the industry.

16 **Q. What financial metrics are used by the rating**
17 **agencies to establish credit ratings?**

18 A. S&P modified its electric and natural gas utility
19 rankings in November 2007 to conform to the "business
20 risk/financial risk" matrix used by their corporate ratings
21 group. The change by S&P was designed to present their
22 rating conclusions in a clear and standardized manner
23 across all corporate sectors.

24 S&P's financial ratio benchmarks used to rate
25 companies such as Avista are set forth in Illustration No.
26 3 below.

1

Illustration No. 3:

Standard & Poor's Financial Risk Indicative Ratios - US Utilities			
	<u>FFO/Debt (%)</u>	<u>FFO/Interest (x)</u>	<u>Debt Ratio (%)</u>
Modest	40 - 60	4.0 - 6.0	25 - 40
Intermediate	25 - 45	3.0 - 4.5	35 - 50
Aggressive	10 - 30	2.0 - 3.5	45 - 60
Highly leveraged	Below 15	2.5 or less	Over 50
12 Month End 9/30/08 Ratios:			
Avista Adjusted*	17.6	3.4	53.7
* Calculated as of 9/30/08 based on last known S&P methodology			

2

3 The ratios above are utilized to determine the
 4 financial risk profile. Currently, Avista is in the
 5 "Aggressive" category. The financial risk category along
 6 with the business risk profile (Avista is in the Strong
 7 category) is then utilized in Illustration No. 4 below to
 8 determine a company's rating. S&P currently has Avista's
 9 corporate credit rating as a BBB-, as indicated in the
 10 following illustration.

11

Illustration No. 4:

12

Business Risk Profile	Financial Risk Profile				
	<u>Minimal</u>	<u>Modest</u>	<u>Intermediate</u>	<u>Aggressive</u>	<u>Highly leveraged</u>

Strong	AA	A	A-	BBB-	BB-
Satisfactory	A	BBB+	BBB	BB+	B+
Weak	BBB	BBB-	BB+	BB-	B
Vulnerable	BB	B+	B+	B	B-

18

1 The other rating agencies (Moody's and Fitch) use a
2 similar methodology to analyze and determine utility credit
3 ratings.

4 **Q. Please describe how these ratios are calculated**
5 **and what they mean?**

6 A. The first ratio, "Funds from operations/total
7 debt (%)", calculates the amount of cash from operations as
8 a percent of total debt. The ratio indicates the company's
9 ability to fund debt obligations. The second ratio, "Funds
10 from operations/interest coverage (x)", calculates the
11 amount of cash from operations that is available to cover
12 interest requirements. This ratio indicates how well a
13 company's earnings can cover interest payments on its debt.
14 The third ratio, "Total debt/total capital (%)", is the
15 amount of debt in our total capital structure. The ratio
16 is an indication of the extent to which the company is
17 using debt to finance its operations. S&P looks at many
18 other financial ratios; however, these are the three most
19 important ratios they use when analyzing our financial
20 profile.

21 **Q. Do rating agencies make adjustments to the**
22 **financial ratios that are calculated directly from the**
23 **financial statements of the Company?**

24 A. Yes. Rating agencies make adjustments to debt to
25 factor in off-balance sheet commitments (for example, the
26 accounts receivable program, purchased power agreements and

1 the unfunded status of pension and other post-retirement
2 benefits) that negatively impact the ratios. S&P has
3 historically made adjustments to Avista's debt totaling
4 approximately \$226 million related to the accounts
5 receivable program, purchased power and post-retirement
6 benefits. The adjusted financial ratios for Avista are
7 included in Illustration No. 3 above.

8 **Q. Where does Avista fall within those coverage**
9 **ratios?**

10 A. Avista's cash flow ratios have improved as a
11 result of the refinancing of the high cost debt that
12 matured in June 2008. S&P and Moody's took this into
13 account when they upgraded Avista in December 2007 and
14 February 2008. Progress in increasing the cash flow ratios
15 in recent years has been slower than anticipated due to
16 below normal stream flows affecting hydro generation,
17 higher thermal fuel costs than the amount included in rates
18 and the resulting inability to eliminate electric deferral
19 balances, and higher capital expenditures that require cash
20 up front before we can recover the costs from customers.
21 Each has an impact on the Company by reducing the amount of
22 available cash flow from operations, requiring external
23 financing and ultimately resulting in higher debt and lower
24 cash flow ratios. In fact, S&P stated the following in a
25 January 2008 research report on Pacific Northwest
26 Hydrology:

Thies, Direct 22
Avista Corporation

1 We find that Avista and Idaho Power, which are
2 comparably sized companies, face the most
3 substantial risk (related to hydro power) despite
4 their PCAs and cost update mechanisms.¹
5

6 Additionally, S&P stated the following in its February 2008
7 research update of Avista Corporation:

8 The Company's financial performance will continue
9 to be significantly affected by hydro conditions
10 and gas prices. And the Company's key utility
11 risk going forward is its exposure to high-cost
12 replacement power, particularly in low water
13 years.²
14

15 In order to improve the cash flow ratios, Avista must
16 reduce its total debt balances and increase its available
17 funds from operations. Although the Company has continued
18 to work towards paying down its total debt, the negative
19 impacts to cash flow caused by below-normal hydroelectric
20 generation and volatility of wholesale electric market
21 prices and natural gas prices in recent years, has
22 adversely affected Avista's progress in improving the cash
23 flow ratios.

24 **Q. Do the rating agencies look at any other factors**
25 **when evaluating a company's credit quality?**

26 A. Yes. In addition to financial ratios and metrics,
27 rating agencies also look at a number of qualitative
28 factors which directly or indirectly may affect a company's
29 cash flow. These factors include:

¹ Standard and Poor's, *Pacific Northwest Hydrology and Its Impact on Investor-Owned Utilities' Credit Quality*, January 2008

² Standard and Poor's, *Avista Corp's Corporate Credit Rating Raised One Notch to BBB-*, February 2008

- 1 ▪ Regulation
- 2 ▪ Markets
- 3 ▪ Operations
- 4 ▪ Competitiveness, and
- 5 ▪ Management

6 In evaluating these factors, the rating agencies look
7 for regulatory actions that are supportive of cost recovery
8 and that eliminate or minimize volatility of cash flows.
9 They also consider the strength and growth of the economy
10 in our service territory, operations' ability to control
11 costs, whether our service is competitive, and the
12 effectiveness of management.

13 Therefore, while the ratios are utilized in their
14 quantitative evaluation of a company, they are not the only
15 factors that are taken into account.

16 **Q. What risks are Avista and the utility sector**
17 **facing that may impact credit ratings?**

18 A. Avista's credit ratings are impacted by risks
19 that could negatively affect the company's cash flows.
20 These risks include, but are not limited to, the level and
21 volatility of wholesale electric market prices and natural
22 gas prices for fuel costs, liquidity in the wholesale
23 market (fewer counterparties and tighter credit
24 restrictions), recoverability of natural gas and power
25 costs, stream flow and weather conditions, changes in

1 legislative and governmental regulations, relicensing hydro
2 projects, rising construction and raw material costs,
3 customers' ability to timely pay their bills, and access to
4 capital markets at a reasonable cost.

5 Credit ratings for the utility sector are also
6 adversely impacted by large capital expenditures for
7 environmental compliance, and the need for new generation
8 and transmission and distribution facilities. The utility
9 sector is in a cycle of significant capital spending, which
10 will likely be funded by large issuances of debt and
11 equity. This increases the competition for financial
12 capital at a time when the average utility credit rating is
13 just above investment grade.

14 Given the downturn in the economy and the tightened
15 credit markets, the rating agencies are keeping closer tabs
16 on all companies in order to make sure there is sufficient
17 liquidity in case the credit markets are inaccessible. Not
18 having sufficient sources of cash for potential cash
19 requirements could prompt a credit rating downgrade.

20 The increased capital spending needs and resulting
21 increased debt issuances make regulation supporting the
22 full and timely recovery of prudently incurred costs even
23 more critical to the utility sector than in previous years.

24 **Q. How important is the regulatory environment in**
25 **which a Company operates?**

1 A. The regulatory environment in which a company
2 operates is a major qualitative factor in determining a
3 company's creditworthiness. Moody's stated the following
4 regarding Avista's regulatory environment in a December
5 2008 credit ratings report:

6 "Avista benefits from credit supportive
7 ratemaking practices in all three of its
8 jurisdictions, which include periodic mechanisms
9 to account for variations in the power and
10 natural gas costs incurred as compared to the
11 levels included in rates." However, Moody's also
12 pointed out that "Failure to obtain adequate and
13 timely support for recovery of and return on core
14 utility investments through pending and expected
15 future regulatory proceedings, or any unexpected
16 material deviation from the back-to-basics
17 strategy, are among the more important factors
18 that could have negative rating implications."³
19

20 Additionally, in a January 2008 article published by
21 S&P entitled "Top Ten US Electric Utility Credit Issues for
22 2008 and Beyond", S&P stated that "Recovering in a timely
23 manner federally and/or state mandated compliance costs is
24 paramount to preserving credit quality for regulated
25 electric utilities."⁴

26 Due to the major capital expenditures planned by
27 Avista, the continued supportive regulatory environment
28 will be critical to Avista's financial health.
29 Additionally, although Avista has electric and natural gas
30 tracking mechanisms (PCA and PGA) to provide recovery of

³ Moody's Investor Service, *Moody's Upgrades Avista Corp* (December 3, 2008)

⁴ Standard and Poor's, *Top Ten US Electric Utility Credit Issues for 2008 and Beyond*, January 2008

1 the majority of the variability in commodity costs, these
2 changes in costs must be financed until the costs are
3 recovered from customers. Investors and rating agencies
4 are concerned about regulatory lag and cost-recovery
5 related to these items.

6 **Q. How do you expect the rating agencies will view**
7 **the Company's proposed change in the PCA mechanism from a**
8 **"90%/10%" to a "95%/5%" sharing?**

9 A. I believe the rating agencies will view the
10 Company's proposal favorably. In a report issued by S&P on
11 January 14, 2009 relating to the approval by the IPUC on a
12 similar change in Idaho Power's PCA, they stated "S&P said
13 today that improvements to Idaho Power Company's annual PCA
14 mechanism supports credit quality but will have no
15 immediate impact on credit ratings." The changes are
16 expected to reduce the under-collection of power costs and
17 reduce cashflow volatility.

18

19

IV. CASH FLOW

20 **Q. What are the Company's sources to fund capital**
21 **requirements?**

22 A. The Company utilizes cash flow from operations,
23 long-term debt and common stock issuances to fund its
24 capital expenditures. Additionally, on an interim basis,
25 the Company utilizes its credit facilities to fund working

1 capital needs and capital expenditures until longer-term
2 financing can be obtained.

3 **Q. What are the Company's near-term capital**
4 **requirements?**

5 A. As a combination electric and natural gas
6 utility, over the next few years, capital will be required
7 for customer growth, investment in generation, transmission
8 and distribution facilities for the electric utility
9 business, as well as necessary maintenance and replacements
10 of our natural gas systems.

11 The amount of capital expenditures planned for 2009-
12 2010 is approximately \$420 million. For 2009 alone, these
13 costs equate to a total of \$210 million. Total ratebase at
14 November 30, 2008 was \$1.9 billion for the total Company;
15 therefore, these planned capital additions represent
16 substantial new investments given the relative size of the
17 Company. A few of the major capital expenditure items on a
18 system basis for 2009 include \$60 million for electric
19 transmission and distribution upgrades, \$20 million for
20 natural gas system upgrades, \$10 million for environmental
21 (associated with the Spokane River relicensing and the 2001
22 Clark Fork River license implementation issues), and \$30
23 million for generation upgrades.

24 **Q. What are the Company's long-term capital**
25 **requirements?**

1 A. Avista's Integrated Resource Plan has identified
2 the potential need for the Company to finance significant
3 expenditures for electric facilities. The preferred
4 strategy outlined in our 2007 Integrated Resource Plan
5 included total expenditures of \$1.25 billion by 2018,
6 including investment in wind resources and upgrades at
7 hydroelectric stations.

8 Major capital expenditures are a normal part of
9 utility operations. Customers are added to the service
10 area, roads are relocated and require existing facilities
11 to be moved, and facilities continue to wear out and need
12 replacement. These and other requirements create the need
13 for significant capital expenditures each year. We saw
14 significant increases in the costs of raw materials over
15 the past year, which our suppliers are continuing to pass
16 through to us in the pricing of their finished products.
17 Access to capital at reasonable rates is dependent upon the
18 Company maintaining a strong capital structure, sufficient
19 interest coverage, and investment grade credit ratings.

20 **Q. What are the Company's near-term plans related to**
21 **its debt?**

22 A. During 2008 the Company issued \$250 million of
23 secured debt in April but, as explained earlier, chose not
24 to go forward with a planned issuance of \$100 million in
25 long-term debt in September due to unfavorable conditions
26 in the debt capital markets. The Company instead sought

1 out and was able to establish a second bank line of credit
2 in the amount of \$200 million for 364 days to ensure
3 continued adequate liquidity. The Company was also offered
4 and accepted a private placement of \$30 million of First
5 Mortgage Bond secured 5-year debt.

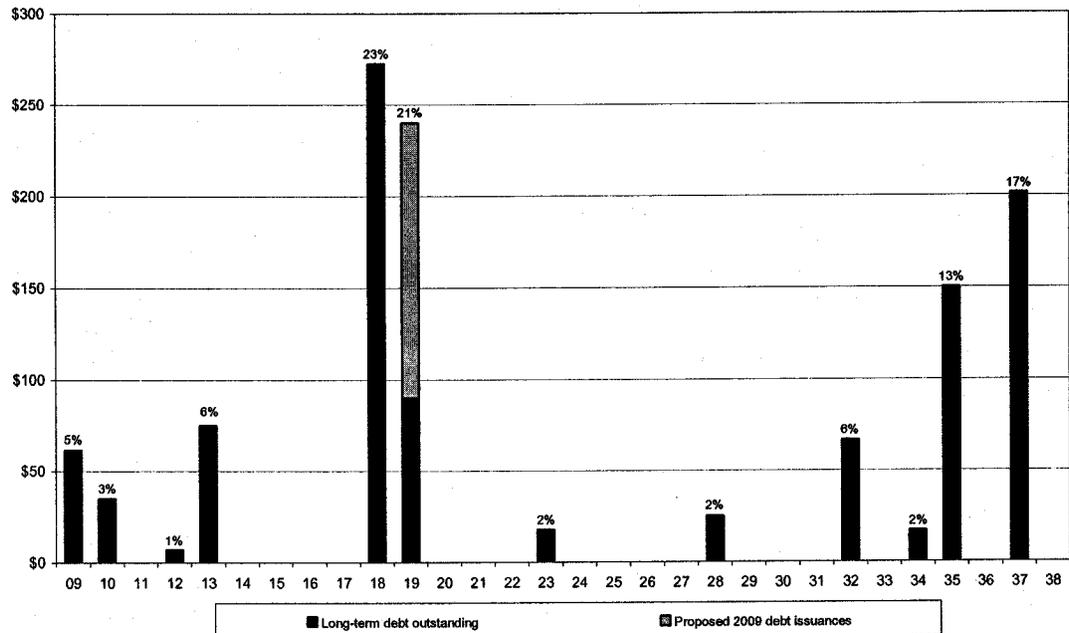

6 The Company currently plans to issue up to \$150
7 million of secured, fixed rate bonds during 2009. The
8 proceeds from the issuance of the securities will be
9 utilized to fund capital expenditures and repay funds
10 borrowed under our credit facilities. The Company has no
11 long-term debt scheduled to mature in 2009; however, it has
12 an option to redeem \$61.9 million of Trust Preferred
13 Securities in March 2009.

14 Illustration No. 5 below shows the amount of debt
15 maturities for Avista each year:

1 Illustration No. 5:

2 **Debt Maturities by Year**

3 *proforma December 31, 2009*

14 Q. Has the Company taken any steps to address the

15 uncertainty related to interest rate exposure for the

16 planned debt issuance in 2009?

17 A. Yes. The Company recently entered into four

18 forward-starting interest rate swaps for a total of \$100

19 million as a hedge on a portion of the interest payments on

20 the long-term debt we are planning to issue in 2009. The

21 Company is continuing to analyze the possibility of

22 entering into additional transactions in order to lock in

23 the interest rate on a greater portion of the debt at a

24 time when Treasury rates are at all-time historical lows.

1 **Q. What is the status of the Company's lines of**
2 **credit secured by first mortgage bonds and its accounts**
3 **receivable program?**

4 A. The Company has a \$320 million line of credit
5 that expires in April 2011, and a \$200 million line of
6 credit that expires November 24, 2009. The Company has the
7 option of increasing the \$320 million line by \$100 million
8 (up to \$420 million) at any time during the term of the
9 agreement, subject to additional fees and obtaining bank
10 commitments. The agreement includes the option to release
11 the first mortgage bond security when the Company has an
12 investment grade credit rating. The Company also has the
13 option of renewing or upsizing the \$200 million deal to
14 \$250 million under certain circumstances. Additionally,
15 the Company has an \$85 million accounts receivable funding
16 program that expires in March 2009. This agreement has
17 been renewed on a year-to-year basis, and we expect to
18 extend the agreement for another year.

19 The facilities have been sized to allow the Company to
20 maintain a liquidity cushion of at least \$125 million at
21 all times to cover required working capital, counterparty
22 collateral requirements, and avoid issuing debt in
23 unfavorable market conditions if they persist through 2009.
24 Our liquidity is strong and we are confident that our
25 current agreements give us flexibility while facing both

1 the volatile financial markets and volatile energy
2 commodity prices.

3 Many purchases of natural gas, or contracts for
4 pipeline capacity to provide natural gas transportation,
5 require collateral, and/or prepayments, based upon the
6 Company's credit rating. Upgrades to Avista's credit
7 ratings during 2007 and 2008 have reduced the amount of
8 collateral required to be posted with counterparties. If
9 Avista is upgraded above its current credit ratings, the
10 Company should see an increase in the number of
11 counterparties willing to do business with us and the
12 collateral requirements are expected to decrease even
13 further, resulting in reduced borrowing costs. The lines
14 of credit and accounts receivable program are our primary
15 sources of immediate cash for borrowing to meet these needs
16 and for supporting the use of letters of credit. A line of
17 credit is required to manage daily cash flow since the
18 timing of cash receipts versus cash disbursements is never
19 totally balanced.

20 **Q. What are Avista's plans regarding common equity**
21 **and why is this important?**

22 A. Avista will continue to monitor the common equity
23 ratio of its capital structure, and assess the need to
24 issue additional common equity. Avista entered into a
25 sales agency agreement in December 2006 to issue up to two
26 million shares of our common stock from time to time.

Thies, Direct 33
Avista Corporation

1 During the third quarter of 2008, we issued 750,000 shares
2 of common stock under this agreement. Our plan for 2009 is
3 to continue with the periodic offering of common stock as
4 needed to support the Company's common stock ratio. To the
5 extent that we are not able to access the equity market,
6 there will be increased pressure on our lines of credit,
7 and an increased need to issue long term debt, which is
8 likely to unfavorably impact our cost of debt and debt to
9 equity ratio. It is important to the rating agencies for
10 Avista to maintain a balanced debt/equity ratio in order to
11 minimize the risk of default on required debt interest
12 payments.

13 As Dr. Avera explains in his testimony, the 50.0
14 percent common equity ratio requested by Avista in this
15 case is consistent with the range of equity ratios
16 maintained by the firms in the Utility Proxy Group.

17 Dr. Avera notes that electric utilities are facing,
18 among other things, rising cost structures, the need to
19 finance significant capital investment plans, and
20 uncertainties over accommodating future environmental
21 mandates. A more conservative financial profile, in the
22 form of a higher common equity ratio, is consistent with
23 increasing uncertainties and the need to maintain the
24 continuous access to capital that is required to fund
25 operations and necessary system investment, even during
26 times of adverse capital market conditions.

1 He also discusses Moody's warning to investors of the
2 risks associated with debt leverage and fixed obligations
3 and their advice to utilities to not squander the
4 opportunity to strengthen the balance sheet as a buffer
5 against future uncertainties. Moody's noted that, absent a
6 thicker equity layer, utilities would be faced with lower
7 credit ratings in the face of rising business and operating
8 risks:

9 There are significant negative trends developing
10 over the longer-term horizon. This developing
11 negative concern primarily relates to our view
12 that the sector's overall business and operating
13 risks are rising - at an increasingly fast pace -
14 but that the overall financial profile remains
15 relatively steady. A rising risk profile
16 accompanied by a relatively stable balance sheet
17 profile would ultimately result in credit quality
18 deterioration.⁵

19 This is especially the case for Avista, which faces
20 the dual challenge of financing significant capital
21 expansion plans in a turbulent market while at the same
22 time endeavoring to improve its credit standing. Avista is
23 committed to maintaining an appropriate level of equity to
24 support a strong credit rating.

25 **Q. What are Avista's plans regarding preferred**
26 **equity and other financing structures (for example, hybrid**
27 **instruments)?**

28 A. Avista does not have any preferred equity or
29 other financing structures outstanding at December 31,

⁵ Moody's Investors Service, "U.S. Electric Utility Sector," *Industry Outlook* (Jan. 2008).

1 2008. Currently, Avista does not plan to issue preferred
2 equity or other financing structures, but will continue to
3 evaluate the appropriateness of these financing vehicles.

4

5

V. CAPITAL STRUCTURE

6 **Q. Please explain the capital structure proposed by**
7 **Avista in this case.**

8 A. Avista's current capital structure consists of a
9 blend of long-term debt and common equity necessary to
10 support the assets and operating capital of the Company.
11 The proportionate shares of Avista Corp.'s actual capital
12 structure on September 30, 2008, are shown on page 1 of
13 Exhibit No. 2, Schedule 2. A pro forma capital structure
14 is also shown on page 1 in the Schedule, which reflects
15 expected changes for the period ending June 30, 2009.
16 Supporting workpapers provide additional details related to
17 these adjustments on pages 3 through 4.

18 The rate of return to be applied to rate base in this
19 proceeding is equal to the weighted average cost of
20 capital, taking into account the pro forma adjusting items.
21 As shown on page 1 of Exhibit No. 2, Schedule 2, Avista
22 Utilities is proposing an overall rate of return of 8.80%.

23

24

25

26

1 VI. COST OF DEBT

2 Q. How have you determined the cost of debt?

3 A. Cost of debt in the Company's proposed capital
4 structure includes long-term debt. As shown on page 1 of
5 Schedule 2 of Exhibit No. 2, the actual weighted average
6 cost of long-term debt outstanding on September 30, 2008
7 was 6.91%. The size and mix of debt changes over time
8 based upon the actual financing completed. We have made
9 certain pro forma adjustments to update the debt cost
10 through June 30, 2009 to 6.60%. Pro forma adjustments to
11 long-term debt reflect expected maturities of outstanding
12 debt and the issuance of new debt to fund those maturities.
13 The pro forma weighted cost of long-term debt was reduced
14 from 3.45% to 3.30%.

15
16 VII. COST OF COMMON EQUITY

17 Q. What rate of return on common equity is the
18 Company proposing in this proceeding?

19 A. As further explained by Dr. Avera, the cost of
20 equity has increased since the conclusion of Avista's last
21 general rate case. Difficult economic conditions and
22 increased volatility in the financial markets have caused a
23 flight to quality among investors, meaning that they have a
24 preference for investments with very low risk, such as U.S.
25 Treasury bonds, and they are demanding a higher premium
26 (return) for taking additional risk. As explained earlier

1 in my testimony, the interest rate spreads between US
2 Treasuries and utility bonds increased dramatically in the
3 later part of 2008. Equity investments inherently contain
4 more risk, and our cost of equity has also increased since
5 our last rate case.

6 The Company is proposing an 11.0% return on common
7 equity (ROE), which falls below the lower end of Dr.
8 Avera's recommended range of required return on equity.
9 Dr. Avera testifies to analyses related to the cost of
10 common equity with an ROE range of 11.3% to 13.3%. In his
11 testimony Dr. Avera states that:

12 Considering investors' expectations for
13 capital markets and the need to support
14 financial integrity and fund crucial
15 capital investment even under adverse
16 circumstances, I concluded that Avista's
17 requested ROE of 11.0% percent is
18 reasonable. (P. 5, L. 40 - P. 6, L. 1)
19

20 **Q. Dr. Avera suggests an ROE range of 11.3% to**
21 **13.3%. Why is Avista requesting an ROE below the lower end**
22 **of the range?**

23 A. As I have testified, Avista has made solid
24 progress towards improving its financial health. If Avista
25 can earn an 11.0% ROE, I believe our financial condition
26 would continue to improve and would further strengthen the
27 credit ratings ratios.

28 Furthermore, as the Company has worked toward
29 improving its financial condition over the last several
30 years, it has done so with the customer in mind. Avista is

1 attempting to balance the ability to continue to improve
2 our financial health and access capital markets under
3 reasonable terms with the impacts that increased retail
4 rates have on its customers. In this case, although we
5 believe an ROE greater than 11.0% is supported and is
6 warranted, we also believe the 11.0% provides a reasonable
7 balance of the competing objectives.

8 **Q. Please summarize the proposed capital structure**
9 **and the cost components for debt and common equity.**

10 A. As also shown on page 1 of Exhibit No.2, Schedule
11 2, the following illustration shows the capital structure
12 and cost components proposed by the Company.

1 **Illustration No. 6:**

2 **AVISTA CORPORATION**
3 **Capital Structure and Overall Rate of Return**

4 **PRO FORMA**
5 **Cost of Capital as of**

6	7	8	9	10
	<u>Amount</u>	<u>Percent of</u>	<u>Cost</u>	<u>Component</u>
		<u>Total Capital</u>		
11	Total Debt	\$945,800,000 *	50.00%	6.60%
12	Common Equity	<u>1,061,732,371</u> *	<u>50.00%</u>	11.00%
13	TOTAL	<u>\$2,007,532,371</u>	<u>100.00%</u>	8.80%

14 * Pro forma Common Equity of 50% is less than calculated Common Equity based on Pro Forma
15 Capital Structure at June 30, 2009 calculated above

16 **VIII. INCREASE IN PENSION EXPENSE**

17 **Q. Has the Company included an adjustment in this**
18 **filing for increased pension expense?**

19 A. Yes. The Company's pension expense has
20 increased, on a system basis, from \$12.1 million for the
21 test year ended September 30, 2008 to \$18.4 million⁶ for
22 2009. Company witness Ms. Andrews discusses the accounting
23 adjustment to results of operations to reflect this.

24 **Q. What is the reason for the increase in pension**
expense in 2009?

A. The increase in pension expense is due primarily
to the negative overall market performance in 2008.

⁶ Most recent analysis, just prior to this filing, indicates that the pension cost for 2009 may be higher at \$22.2 million.

1 Although the pension plan assets are diversified among
2 investment classes, negative returns were associated with
3 virtually all assets except cash. The stock market had a
4 negative 38% return on the S&P 500 Index, and bond markets
5 and commodities also performed negatively in 2008.

6 The Company's 2008 pension plan return on assets is
7 estimated to be negative 21%. The negative returns and
8 resulting declining value of our pension plan assets
9 increased the pension expense for 2009.

10 The overall market decline impacted the pension plan
11 assets of other companies as well. Most companies with
12 defined benefit pension plans have experienced similar
13 asset value declines and increased funding levels as a
14 result of general market conditions and the Pension
15 Protection Act of 2006 (PPA).

16 Results from an EEI survey conducted in early December
17 2008, indicated that all 24 electric utilities who
18 participated in the survey were estimating negative returns
19 for their pension plan assets in 2008. The 2008 average
20 expected pension returns of the 24 companies surveyed was a
21 negative 26.7%. The Company's pension returns, as described
22 above, were somewhat better than these reported returns.

23 **Q. Will you describe the process utilized by the**
24 **Company for administering investments in its defined**
25 **benefit plan (pension plan)?**

1 A. Yes. The Company has a very disciplined approach
2 to the oversight and monitoring of the pension plan. The
3 Board of Directors of the Company, acting through the
4 Finance Committee of the Board, is responsible for setting,
5 monitoring and adjusting the Investment Policy Statement
6 (IPS) with respect to the investment of funds for the
7 pension plan. The IPS summarizes the Finance Committee's
8 investment policies for the management and oversight of the
9 pension plan. It sets forth the objectives of the plan,
10 the strategies designed to achieve these objectives,
11 procedures for monitoring and control of plan assets and
12 the delegation of responsibilities for the oversight and
13 management of plan assets. Given the long-term time horizon
14 of the pension plan, the IPS is designed to endure multiple
15 market environments and to not be reactive to what might be
16 considered normal short-term events. The IPS includes a
17 policy portfolio that envisions a reasonably stable
18 allocation of assets among major asset classes.

19 **Q. What are the investment policies for management**
20 **and oversight of the pension plan?**

21 A. As stated in the IPS, the objectives of the
22 pension plan are designed to provide a total return that,
23 over the long term, provides sufficient assets to fund its
24 liabilities subject to an acceptable level of risk,
25 contributions and pension expense deemed appropriate by the
26 Board Finance Committee and to diversify investments within

1 asset classes to reduce the impact of losses in single
2 investments.

3 **Q. What resources does the Company utilize to perform**
4 **its duties under the Investment Policy Statement related to**
5 **investment of Pension Assets?**

6 A. The Company retains an external investment
7 management consultant to develop and recommend asset
8 allocation of the pension plan assets, evaluate and
9 recommend investment managers and monitor the performance
10 and business of the investment managers of the plan assets.
11 This consultant provides a quarterly performance and
12 compliance report of the plan assets. The performance
13 report is reviewed by the Company's internal Benefits Plan
14 Administration Committee quarterly. The performance report
15 is also reviewed by the Board Finance Committee on a
16 quarterly basis. In addition, a report detailing
17 compliance with the specific requirements of the IPS is
18 provided quarterly to the Board Finance Committee.

19 **Q. What are the impacts of the Pension Protection**
20 **Act (PPA) on the Company's Pension plan?**

21 A. The PPA was passed in 2006 and requires annual
22 increases to the pension funding level in order to
23 eventually achieve a fully funded plan. The PPA
24 established that in 2008 the funding level would be 92% of
25 the pension plan obligations. For 2009 this level
26 increases to 94%. In 2008, Avista's funding level was 92%

1 and is projected to be 94% in 2009, based on increased
2 Company contributions to the plan. If the plan funding
3 level does not meet these established percentages, the
4 entire funding deficit must be added to the contribution
5 over the next seven years in order to be fully funded after
6 seven years. If the percentage falls below 80%, plan
7 restrictions would be imposed and the plan would be
8 considered "at-risk." Should this occur, benefit accruals
9 would be frozen and plan participants would not be able to
10 accrue additional pension benefits. Additionally, lump sum
11 distributions to participants would not be allowed.

12 To avoid these restrictions the Company is committed
13 to fully meeting these funding levels and complying with
14 the requirements of the PPA.

15 **Q. Do the annual cash contributions to the pension**
16 **fund equal the annual pension expense recognized by the**
17 **Company?**

18 A. No. In fact the cash contribution that Avista
19 will make to the pension fund in 2009 will be substantially
20 higher than the proforma expense of \$18.4 million
21 identified earlier. The annual cash contribution is driven
22 by the need to comply with the funding requirements of the
23 PPA (e.g., 94% funded by the end of 2009). It will be
24 necessary to make a cash contribution to the pension fund
25 in 2009 of at least \$42 million, and more recent analysis

1 indicates that we may need to contribute \$67 million of
2 cash in 2009.

3 The pension expense recognized by the Company is
4 determined using a formula as prescribed by Financial
5 Accounting Standard No. 87 (FAS 87). The objective of FAS
6 87 is to recognize the compensation cost of an employee's
7 pension benefits (including prior service cost) over that
8 employee's approximate service period. While the pension
9 cash contribution amount does affect the pension expense,
10 the FAS 87 assumptions and calculations are different from
11 those used to determine the funded status.

12 As can be seen by the differences in the 2009 cash
13 contribution of \$67 million and the pension expense of
14 \$18.4 million, the differing requirements of the PPA and
15 FAS 87 can result in a substantial difference between cash
16 contributions and recognition of expense. The current
17 level of pension expense reflected for ratemaking purposes
18 is \$11.85 million. Therefore, until the conclusion of this
19 case, the current annualized difference between the cash
20 contribution and pension expense is over \$55 million (\$67
21 million - \$11.85 million).

22 **Q. What impact does that timing difference have on**
23 **the Company?**

1 A. The result for Avista in 2009 is that the Company
2 would make a cash payment of \$67 million, while recovering
3 \$11.85 million of expense through its retail rates. Absent
4 some form of accounting treatment or other relief from the
5 Commission, Avista would not recover the time value of
6 money on the difference between the cash payment and the
7 level of expense. Because of the magnitude of this
8 difference, the absence of a carrying cost would have a
9 significant impact on the earnings of the Company. The
10 difference of \$55 million times the requested rate of
11 return of 8.80% is \$4.8 million for 2009 alone.

12 **Q. Have you seen these kinds of cash versus expense**
13 **differences in the past?**

14 A. Nothing even close to this magnitude. A
15 comparison of cash payments versus pension expense for each
16 year from 1992 through 2008 is shown in Illustration No. 7
17 below. Not only are the annual differences much smaller,
18 but on a cumulative basis through 2007, the difference is
19 only \$1.4 million. However, in 2008 the cash payment is
20 \$16.0 million higher than the expense, and the difference
21 for 2009 will be even greater.

1

Illustration No. 7:

Year	Cash Contribution	Annual Expense	Difference	Cumulative Difference
1992	\$0.0	-\$1.1	\$1.1	\$1.1
1993	\$0.0	-\$0.5	\$0.5	\$1.6
1994	\$0.0	\$1.0	-\$1.0	\$0.6
1995	\$0.0	\$2.0	-\$2.0	-\$1.4
1996	\$0.0	\$2.4	-\$2.4	-\$3.8
1997	\$3.3	\$2.2	\$1.1	-\$2.7
1998	\$0.0	\$1.5	-\$1.5	-\$4.2
1999	\$0.0	\$2.4	-\$2.4	-\$6.6
2000	\$3.3	\$0.8	\$2.5	-\$4.1
2001	\$0.0	\$3.8	-\$3.8	-\$7.9
2002	\$12.0	\$9.3	\$2.7	-\$5.2
2003	\$12.0	\$14.9	-\$2.9	-\$8.1
2004	\$15.0	\$13.6	\$1.4	-\$6.7

2006	\$15.0	\$12.8	\$2.2	-\$1.3
2007	\$15.0	\$12.3	\$2.7	\$1.4
2008	\$28.0	\$12.0	\$16.0	\$17.3

2

3 **Q. Do you expect these major cash versus expense**
4 **differences to continue for the indefinite future?**

5 A. No. Although they may continue for some period
6 of time, as the financial markets recover, which we
7 anticipate they will at some point, the cash contribution
8 requirement for the pension plan will come down and
9 potentially go to zero at some point. At that point, there
10 would be opportunity for the cumulative difference between
11 cash and expense to again move toward zero.

12 In the meantime, however, we have a significant
13 difference between the cash contribution and pension
14 expense that needs to be addressed in some way.

1 **Q. What is the Company proposing with regard to this**
2 **difference between the cash contribution to fund the**
3 **pension plan and the annual level of pension expense?**

4 A. Due to the substantial difference between the
5 2009 pension payment and the amount of authorized utility
6 pension cost, the Company is requesting approval to
7 establish a regulatory asset for the carrying costs on the
8 cumulative difference between payments and authorized
9 pension cost. It is important to emphasize that we are not
10 requesting accounting treatment to defer the actual dollar
11 differences between the cash payment and expense, but only
12 the carrying cost on those dollar differences.

13 In future periods if the pension cash payments are
14 less than the authorized cost, the cumulative difference
15 will decrease and the resulting carrying cost accrual will
16 decrease.

17 **Q. When does the Company propose to start the**
18 **accrual of the carrying cost, and at what rate?**

19 A. The Company is proposing to begin accruing the
20 carrying charge effective February 1, 2009, at its
21 authorized rate of return during the month the accrual
22 occurs, compounded annually. The current authorized rate of
23 return is 8.45%.

24 **Q. How would the accrual calculations be made?**

25 A. A reduction to the cash payments would first be
26 made to remove the portion related to non-utility. The

1 remaining utility portion would be allocated to utility
2 jurisdictions and services based on the labor dollars
3 included in this filing.

4 Assuming the Company will be making contributions to
5 the pension plan in 2009 of \$67 million, after removing the
6 portion of pension costs related to non-utility companies
7 of 0.42%, or \$0.28 million, the remaining portion of the
8 \$67 million related to utility operations amounts to \$66.72
9 million. In contrast, the amount of pension expense
10 related to utility operations on a system basis is \$11.85
11 million from the last general rate case.

12 A carrying charge would be accrued each month,
13 beginning February 1, 2009, based on the cumulative
14 difference between the actual cash payments and the
15 authorized pension expense.

16 **Q. What accounts would be used to account for the**
17 **accrual of the carrying cost?**

18 A. The accrual of the carrying cost would be
19 recorded by debiting Account 182.3 - Other Regulatory
20 Assets and crediting Account 419 - Interest Income. The
21 carrying cost calculation and a breakdown of the regulatory
22 asset would be maintained by utility jurisdiction
23 (Washington and Idaho) and utility service (electric and
24 gas). Should the accrual become negative, Account 431 -
25 Other Interest Expense would be debited and Account 182.3
26 would be credited until the balance in Account 182.3

Thies, Direct 49
Avista Corporation

1 reaches zero, and then, Account 254 - Other Regulatory
2 Liabilities would be credited. Deferred federal income
3 taxes would be recorded by debiting Account 410.2 -
4 Provision for Deferred Income Taxes, Other Income and
5 Deductions and crediting Account 283 - Accumulated Deferred
6 Income Taxes-Other.

7 **Q. How would the deferred carrying costs be**
8 **recovered in rates?**

9 A. The Company would continue to review the balance
10 of deferred carrying costs to determine if a rate
11 adjustment to recover the costs was necessary. The
12 regulatory asset/regulatory liability accounts will
13 function like a balancing account. While a regulatory
14 asset will be created in 2009, a rebound in the investment
15 market could cause the regulatory asset to be offset by
16 regulatory liability entries over a period of time, and no
17 rate adjustment would be necessary. If a rate adjustment
18 were to become necessary, the Company would file a request
19 as part of a general rate case or other filing to recover
20 the deferral balance.

21 **Q. Does that conclude your pre-filed direct**
22 **testimony?**

23 A. Yes.
