Please describe your comment briefly:

Got a bill from Avista for this month and it contain 2 flyers, one for increasing the rates for customers on Schedules 91 and 191, the second was to raise a rate credit to Residential and small farm customers. Then I read in the paper this morning that the PUC has given them part of their last asked for increase. My question is do they have a standing order that hit the PUC table for an increase as they know they usally get at least 1/2 of the asked hike??????? It looks to be a system attack on the PUC. Would like the PUC just once to say NO.. G Anderson

Schedule 91 & 191. Energy efficient rider adjustment. I am not fully understanding this increase or the reason for it. I do know that gas prices at the well head are at historical lows. There is a large surplus of stored gas in reserve. We have in our portfolio some gas & oil stocks. We get from several managers a detailed report on prices now & in future what is in reserve. It all points to a lower price. Just wondering, because of the low prices & abundance, as of right now, why any increase is necessary. It seems to me we should be getting a decrease. The wholesale price of gas to Avista should determine the price -up or down- to the consumer.
