Attorney for the Commission Staff

## BEFORE THE IDAHO PUBLIC UTILITIES COMMISSION

IN THE MATTER OF AVISTA CORPORATION'S )  
APPLICATION FOR APPROVAL OF ITS ) CASE NO. AVU-E-13-10  
CAPACITY DEFICIENCY PERIOD TO BE )  
UTILIZED IN THE COMPANY'S SAR )  
METHODOLOGY. ) COMMENTS OF THE  
COMMISSION STAFF

---

**COMES NOW** the Staff of the Idaho Public Utilities Commission, by and through its Attorney of record, Kristine A. Sasser, Deputy Attorney General, and in response to the Notice of Modified Procedure issued in Order No. 32971 on January 28, 2014, in Case No. AVU-E-13-10, submits the following comments.

### BACKGROUND

In Order No. 32697, the Commission directed that a case be initiated outside of each utility's Integrated Resource Plan (IRP) filing to establish a capacity deficiency period to be utilized in the utility's Surrogate Avoided Resource (SAR) methodology for computing avoided cost rates to be included in PURPA power purchase agreements. On October 16, 2013, Avista Corporation filed an Application requesting that the Commission approve its updated capacity deficiency periods to be utilized in its SAR avoided cost methodology.

## **STAFF ANALYSIS**

### **Avista's 2013 IRP**

On August 29, 2013, Avista filed its 2013 IRP with the Commission. In its 2013 IRP, Avista identified winter capacity deficits in 2015 and 2016. Those deficits disappear beginning in 2017 due to the addition of long-term contracts. Winter deficits reappear in 2020 and persist throughout the remainder of the 20-year planning period. A very small, temporary, summer capacity deficit is identified in 2016. Many near-term deficits are from decreased hydroelectricity capacity during periods of planned maintenance and upgrades. An annual energy deficit is not expected to begin until 2026. *See* Attachment A showing pages 8-38 through 8-40 of Avista's 2013 IRP.

Because the capacity deficits identified in 2015 and 2016 are only temporary, Avista plans to meet them with short-term market purchases. Market purchases of 75 and 100 MW are planned in 2015 and 2016, respectively. Avista relied on work by the Northwest Power and Conservation Council in its Resource Adequacy Forum to determine a reasonable level of reliance on the market for surplus summer energy and capacity. Reliance is limited to Avista's prorated share of the regional load. Avista believes that the present market can meet these minor summer and winter capacity shortfalls; therefore, the Company plans optimize its portfolio to postpone new resource investments for winter capacity until 2020. *See* 2013 IRP p. 2-37.

### **Updates to the 2013 IRP**

In its Application, Avista has updated its capacity and energy load forecasts from its 2013 IRP. The updated load and resource balances also take into account new long-term contracts. Attachment B is a copy of Avista's current capacity and energy positions.

Compared to the 2013 IRP, the updated capacity load forecasts are generally higher in winter and lower in summer. This results in larger winter capacity deficits than were identified in the 2013 IRP. The current forecasts show capacity deficits of 123 and 139 MW in the winters of 2015 and 2016, and continue to show a summer deficit of 36 MW in the summer of 2016.

Looking at annual energy, Avista's updated forecast is lower than its 2013 IRP. This results in larger average energy surpluses through 2026 and smaller deficits throughout the remainder of the planning period.

## **Capacity and Energy Deficits for Avoided Cost Computations**

Based on its updated capacity and energy balance, Avista appears to continue to plan to meet summer and winter capacity deficits in 2015 and 2016 with short-term market purchases. No short-term contracts have yet been signed to satisfy these deficits. However, Staff does not believe Avista's strategy to rely on short-term purchases is imprudent, especially considering that these deficits only persist for two years, after which the Company is again in a surplus position. Avista presents a unique set of circumstances. Avista must procure something to satisfy its short-term deficits. However, if Avista acquired a long-term resource to satisfy deficits in 2015 and 2016, that resource would not be needed again until 2020. It would not be prudent to acquire a long-term resource to satisfy a short-term deficit.

The Commission determined in Order No. 32802, and clarified in Order No. 32871, that for existing PURPA projects with expiring contracts, once a PURPA project begins receiving capacity payments, it should continue to receive them in any replacement contract it may seek. That situation differs somewhat from the situation presented here, however. Existing PURPA projects seeking replacement contracts already occupy a place in the utility's portfolio, so removal of them would theoretically create an immediate deficiency, thus ongoing capacity payments make sense. New PURPA contracts, on the other hand, arguably should only be paid for capacity that has value to the utility. Capacity provided during a utility's surplus period, regardless of when the surplus period occurs, has no value. Consequently, Staff computed Avista's avoided cost rates so that capacity value is paid only in those years in which it has value to the utility.

## **Results of Avoided Cost Computations**

Using the capacity and energy deficits presented in Avista's Application, Staff computed the SAR methodology avoided cost rates.<sup>1</sup> The rates are shown on Attachment C for wind, solar, non-seasonal hydro, seasonal hydro, and other project types. Note that rates in 2017-2019 decrease due to capacity value not being paid, consistent with the rationale presented above.

---

<sup>1</sup> In computing avoided cost rates, Staff used Avista's 2014 capacity and energy positions from its 2013 IRP. For the period 2015 through 2034, Staff used the capacity and energy positions from Avista's Application in this case. This was necessary because Avista's Application did not include capacity and energy positions for 2014.

## STAFF RECOMMENDATIONS

Staff recommends approval of the capacity and energy positions as proposed by Avista in its Application. Staff further recommends approval of the SAR methodology avoided cost rates as contained in Attachment C to Staff's comments. Finally, Staff recommends that the rates be effective as of the date of Commission approval.

Respectfully submitted this 28<sup>TH</sup> day of February 2014.
