Commission,

I would like to have intervener status in this case. I offer the following comments

1. Does the present SAR methodology for published avoided cost rates need to be modified or augmented? **NO.**

I own and operate a small hydro plant that sell power in Idaho to PacifiCorp and Idaho power as a QF

I believe the current surrogate avoided Resource model should continue as is for hydro's

Tax Credits and qualification for REC sale is not by any means a sure thing for hydro. Qualification, if any, is site specific and not generic. Whatever benefit is derived should stay with producer not the buyer.

The original contract I signed in the mid eighties will be completed in approximately 11 years. I would like the current SAR model to continue as is for hydro .

Thank you for the opportunity to comment.
