Commission,

I would like to have intervener status in this case. I offer the following comments

I own and operate 6 small hydro plants that sell power in Idaho to PacifiCorp and Idaho power as QF's .

I believe the current surrogate avoided Resource model should continue as is for hydro's

Tax Credits and qualification for REC sale is not by any means a sure thing for hydro. Qualification if any is site specific not generic. Whatever benefit is derived should stay with producer not the buyer.

Many of the original contracts I signed in the mid eighties will be completed in 10 to 12 years. I would like the current SAR model to continue as is for hydro .

Thanks for the opportunity to comment .
