

1 Q. Please state your name and address for the  
2 record.

3 A. My name is Terri Carlock. My business  
4 address is 472 West Washington Street, Boise, Idaho.

5 Q. By whom are you employed and in what  
6 capacity?

7 A. I am employed by the Idaho Public  
8 Utilities Commission as the Accounting Section  
9 Supervisor.

10 Q. Please outline your educational background  
11 and experience.

12 A. I graduated from Boise State University in  
13 May 1980, with a B.B.A. Degree in Accounting and in  
14 Finance. I have attended various regulatory,  
15 accounting, rate of return, economics, finance and  
16 ratings programs. I chaired the National Association  
17 of Regulatory Utilities Commissioners (NARUC) Staff  
18 Subcommittee on Economics and Finance for over 3  
19 years. Under this subcommittee, I also chaired the Ad  
20 Hoc Committee on Diversification. Since joining the  
21 Commission Staff in May 1980, I have participated in  
22 audits, performed financial analysis on various  
23 companies and have presented testimony before this  
24 Commission on numerous occasions.

25 Q. What is the purpose of your testimony in

1 this proceeding?

2 A. The purpose of my testimony is to address  
3 the issues identified in Order No. 28722, IPC-E-01-7  
4 and IPC-E-01-11 for Idaho Power Company (Idaho Power,  
5 Company). These issues are trading practices (to  
6 include hedging, transmission and wheeling charges,  
7 Mid-C pricing and the use of weighted average pricing)  
8 and what has been termed the November trading event.  
9 All of these issues pertain to Case No. IPC-E-01-7 and  
10 IPC-E-01-11. The trading practices going forward  
11 pertain to Case No. IPC-E-01-16.

12 In initiating the present investigation  
13 regarding the \$51.235 million of disputed power  
14 purchases, the Commission intended to investigate the  
15 Company's "trading practices (to include hedging,  
16 transmission and wheeling charges, Mid-C pricing, and  
17 the use of weighted average pricing)". Order No.  
18 28722 at 17. In the prefiled direct testimony of  
19 several of its witnesses, the Company asserts that  
20 Staff's challenge to the Company's trading practices  
21 in the 2000-2001 PCA year is contrary to prior  
22 Commission Orders. The Staff does not agree with some  
23 of the characterization or inferences drawn from these  
24 interpretations of prior Commission Orders.

25 In particular, the Company maintains that

1 the hedging and use of the Mid-C Price Index for day-  
2 ahead and real-time purchases were "previously  
3 reviewed and agreed to between Idaho Power and Staff  
4 and formally approved by the Commission in Order No.  
5 28596 in Case No. IPC-E-00-13." Idaho Power Response  
6 to Comments at p. 8. As discussed later in more  
7 detail, Staff disagrees with Idaho Power's  
8 characterization that the Price Index Mechanism is not  
9 subject to review.

10 Staff recommends the assignment to the  
11 non-operating entity and therefore no recovery from  
12 Idaho customers of both the November transaction  
13 amount of \$7,976,701 and the excess transfer pricing  
14 for power of \$51,234,902 (Idaho jurisdictional  
15 numbers). These adjustments follow normal regulatory  
16 practices intended to protect customers from potential  
17 affiliate abuse. Staff further recommends Idaho Power  
18 establish and implement additional objectives and  
19 safeguards prior to acceptance of the Index pricing  
20 mechanism in future Power Cost Adjustment cases.

21  
22 **POWER COST ADJUSTMENT OVERVIEW AND HISTORY OF TRADING**  
23 **PRACTICES**

24 Q. Please provide an overview of the Power  
25 Cost Adjustment (PCA) mechanism.

1           A.     The PCA is a regulatory mechanism that  
2 allows for annual recovery or rebate of 90 percent of  
3 power costs differing from those already included in  
4 rates. The PCA rate adjustment has two components.  
5 First, power cost differences are projected each  
6 spring based on known snowpack. Second, differences  
7 between the projection and actual costs are tracked  
8 and trued-up in the following year. Inaccuracies in  
9 the projection can cause large after-the-fact true-up  
10 adjustments. Actual power costs come from the  
11 Company's books and are verified by Staff audit each  
12 spring. By its nature, the mechanism allows for  
13 deferral of the costs and recovery after the fact.  
14 The majority of the audit verification takes place  
15 with the true up portion after the fact. Once the  
16 audit is complete, the Commission determines the  
17 amount of the deferral to authorize for recovery.

18           Q.     Has the PCA mechanism changed since it was  
19 first implemented in 1993?

20           A.     Although the basic PCA framework remains  
21 essentially the same, the PCA has evolved and changed  
22 over the years. Several of these changes are  
23 discussed in Company witness Greg Said's prefiled  
24 direct testimony at pages 9 - 16.

25                     When Idaho Power entered the speculative

1 commodity trading business for non-system purposes in  
2 1996, the accounting and reporting was not sufficient  
3 to adequately separate trades between system and non-  
4 system purposes. In Staff comments dated May 7, 1999,  
5 Case No. IPC-E-99-3 (Staff Exhibit No. 108, p. 3),  
6 Staff specifically addressed its concern with the  
7 Company's inability to accurately make this  
8 separation. Staff continued to express its concerns  
9 in the IPC-E-01-7 and IPC-E-01-11 Staff comments dated  
10 April 16, 2001.

11 Each year since 1996 when non-system  
12 trading activities began, Idaho Power made some  
13 changes to the way the separations were made. These  
14 changes were often made during the PCA year. Staff  
15 reviewed the changes after the fact and accepted them  
16 or made recommendations for further changes. Most of  
17 this process occurred between the Staff and Company  
18 during the audit. Other interested parties also  
19 participated at times. Changes were also made by  
20 Idaho Power to the pricing mechanism used to make the  
21 separations. These changes were not prospective but  
22 reviewed as part of the PCA. The prudence of all  
23 transactions was always reviewed after the fact during  
24 the true up phase of the PCA. Staff reviewed the  
25 transactions based on the information available at the

IPC-E-01-7  
IPC-E-01-11  
IPC-E-01-16  
07/20/01

CARLOCK, T(Di)  
Staff

1 time that the decision was made.

2 Q. Staff made an adjustment for approximately  
3 \$51 million associated with the transfer price from  
4 the non-system operation to the regulated system.  
5 Please explain why.

6 A. The market price is not reflective of a  
7 reasonable price surrogate between the system and non-  
8 system for the intra-month purchases. The transfer  
9 price between affiliates must be shown to be  
10 reasonable.

11 To compensate for this change, Staff  
12 proposes to modify the pricing mechanism for the 2000  
13 - 2001 PCA year for intra-month to more accurately  
14 reflect the total cost. The non-system purchases were  
15 less costly overall than the system purchases at  
16 market index. Since these transactions are with a  
17 speculative arm of IDACORP (regardless of whether IES  
18 was a part of Idaho Power or a separate subsidiary  
19 dealing with Idaho Power), Idaho Power must show the  
20 continued reasonableness of the transfer prices. The  
21 lower-of-cost or market for purchases and the higher-  
22 of-cost or market for sales is the standard default  
23 pricing mechanism used for regulated entities when a  
24 proper pricing mechanism between affiliates entities  
25 has not been justified.

1                   Enhanced audit steps are performed to  
2 review affiliate transactions and to protect customers  
3 from possible affiliate manipulation. In connection  
4 with the stipulation made in Case No. IPC-E-00-13 and  
5 reflected in Order No. 28596, it was clear that  
6 continued review of the pricing mechanism would occur.

7       This assurance was provided to address the concerns  
8 of parties in the case related to the affiliate  
9 contract and contract pricing.

10           Q.       Please compare system and non-system term  
11 transactions.

12           A.       Term transactions were implemented for  
13 non-system purposes but effectively stopped for system  
14 purposes after September 2000. Staff is concerned  
15 that Idaho Power has substantially limited long-term  
16 power contracts (i.e., in excess of one month) for the  
17 system-operating book. Confidential Staff Exhibit No.  
18 109 shows the actual system purchases. This exhibit  
19 shows no term purchases for January and February 2001  
20 as shown in Columns 3 and 4. Long-term purchases  
21 entered prior to the IES contract, account for minor  
22 term purchases for the system in Columns 5 and 6.  
23 Confidential Staff Exhibit No. 110 shows the actual  
24 non-system purchases of approximately 80% for January  
25 and February 2001. Confidential Staff Exhibit Nos.

1 111 and 112 reflect the sales transactions. All  
2 Exhibit Nos. 109 through 112 show graphs to reflect  
3 the day ahead, real time, term and total transactions  
4 for the 2000 - 2001 PCA year.

5 The ability to purchase power at a fixed  
6 price is a valuable tool for rate stability. In the  
7 past, the Company has purchased large amounts of power  
8 at relatively inexpensive prices to serve its load.  
9 This is a change in activity and operations that was  
10 not expected. On the contrary, the parties were  
11 assured during the Company's workshops that the  
12 operations would not change.

13 Q. Isn't it reasonable to expect non-system  
14 transactions to differ from system transactions due to  
15 the increased level of risk the non-system may be  
16 willing to bear?

17 A. Yes, the magnitude of the transactions  
18 would differ. The non-system may execute additional  
19 and potentially more risky deals. However, the  
20 direction and the existence of transactions should be  
21 consistent. Therefore, since the non-system executed  
22 term transactions, the system should have had some  
23 corresponding transactions within its risk bands.

24 Term transactions reduce the price  
25 variability and usually the cost for that time period.

1        Since the term transactions were effectively stopped  
2        for the system, the cost to customers was higher. The  
3        power purchases were shifted to intra-month and priced  
4        at the market index.

5            Q.        Please describe the background events  
6        leading to the Company's current trading practices?

7            A.        Company witness Sharon Hoyd outlines the  
8        development of wholesale power markets following  
9        FERC's issuance of Order Nos. 888 and 889 in 1996. As  
10       she explains in her prefiled direct testimony at pages  
11       3 - 11, while the development of markets and the use  
12       of various market devices such as futures and options  
13       increased, the accounting industry was also developing  
14       more stringent accounting rules. The purpose of these  
15       new accounting rules was to appropriately separate the  
16       buying and selling of energy for utility operation  
17       from the buying and selling of energy for trading or  
18       speculative purposes. Eventually, the Financial  
19       Accounting Standards Board (FASB) and its Emerging  
20       Issues Task Force (EITF) promulgated Generally  
21       Accepted Accounting Principles (GAAP) for these  
22       transactions. The adoption of accounting standards  
23       resulted in the issuance of Statement of Financial  
24       Accounting Standards (SFAS) 133, SFAS 138, and EITF  
25       98-10.

1 Q. What do these standards require?

2 A. I agree with Ms. Hoyd's explanation that:

3 EITF 98-10 was written to give  
4 clarification between energy  
5 contracts and energy trading  
6 contracts for accounting purposes.  
7 SFAS 133 and SFAS 138 were written to  
8 ensure that all obligations with  
9 market price exposure are reflected  
10 in the financial statements.

11 Hoyd Prefiled Direct Testimony at 7, ll. 7-11

12 (emphasis added).

13 Q. Did the Company and Staff discuss the  
14 adoption and application of these new accounting  
15 standards to Idaho Power?

16 A. Yes. In a letter dated March 18, 1999 to  
17 the then administrator of the Staff's Utility  
18 Division, Company witness Ric Gale stated that the  
19 Company was changing its classification and reporting  
20 of purchase and sales transactions relating to its  
21 power trading operations. Staff Exhibit No. 113 at p.  
22 1. In particular, transactions (including purchases  
23 and sales) pertaining to "the balancing of the  
24 [Company's] system load and . . . system reliability  
25 are classified as 'system' [transactions]." *Id.*  
Conversely, transactions not related to the balancing  
of the system load and resources are classified as  
"non-system" transactions. *Id.* Idaho Power requested

1 that the administrator provide a "letter indicating  
2 the Commission's acknowledgement of these changes."

3 *Id.*

4 Q. Did the administrator forward a letter to  
5 the Company?

6 A. Yes. In a April 7, 1999 letter to Mr.  
7 Gale, Stephanie Miller (the Utilities Division  
8 Administrator) noted that the Commission understands  
9 the Company's implementation of the system and non-  
10 system accounting. Idaho Power Exhibit No. 9. Her  
11 letter stated that the Commission "does not take  
12 exception to the described accounting changes but  
13 reserves judgment on ratemaking issues related to the  
14 exclusions of these [non-system, marked-to-market]  
15 transactions from the PCA." *Id.*

16 Q. What was the next historical event?

17 A. As a result of implementing the accounting  
18 changes, the Company in the 1999-2000 PCA case (Case  
19 No. IPC-E-99-3) separated power transactions for the  
20 months of January, February, and March 1999 into  
21 operating and non-operating transactions. Idaho Power  
22 Exhibit No. 7, Order No. 28049 at 2. The Order  
23 further recites that the Staff asserted in its  
24 comments that "it is unable to reach any firm  
25 conclusions about future effects of removing the non-

1 operating power marketing transactions from the PCA."  
2 *Id.* at 3.

3 In that PCA case, the Industrial Customers  
4 of Idaho Power (ICIP) also expressed concern that  
5 removal of the non-operating sales from the PCA would  
6 remove the revenue accruing to ratepayers from such  
7 sales. *Id.* "The ICIP is concerned that Idaho Power's  
8 management has every incentive to maximize the amount  
9 of sales removed from the PCA while minimizing the  
10 amount of expenses removed." *Id.*

11 Likewise, FMC (now Astaris) expressed  
12 similar concerns. In particular, the Order recites  
13 that FMC insisted that "ratepayers are entitled to  
14 assurances that costs are properly allocated to the  
15 Company's competitive activities and the ratepayers  
16 are compensated for any use of utility resources to  
17 support the speculative trading." Idaho Power Exhibit  
18 No. 7, Order No. 28049 at 4.

19 The Commission agreed with FMC and ICIP  
20 that:

21 Adequate safeguards must be in place  
22 to ensure that the Company's  
23 ratepayers are protected from the  
24 risks associated with such  
25 [speculative trading] activities. We  
believe that it is premature to  
conduct a formal hearing relating to  
this issue but agree that further  
consideration of this issue is

1 warranted. We direct the Commission  
2 Staff to coordinate with Idaho Power,  
3 FMC, the ICIP and all other  
4 interested persons to determine,  
5 informally, how best to address the  
6 issue. Those parties might consider  
7 conducting a workshop. If necessary,  
8 any or all of them are free to  
9 petition this Commission to initiate  
10 a formal case. Regardless, we expect  
11 that some written work product will  
12 ultimately emanate from the efforts  
13 of the parties containing an analysis  
14 of the issue and a recommendation  
15 regarding what action, if any, is  
16 needed by this Commission.

17 Idaho Power Exhibit No. 7, Order No. 28049 at 5.

18 Q. Following the issuance of this Order on  
19 May 14, 1999, did the parties participate in a  
20 workshop?

21 A. Yes. As verified by Company witness Said  
22 on page 14 of his prefiled direct testimony, a  
23 workshop was held on September 23, 1999.

24 Q. Did the workshop result in a "written work  
25 product"?

A. Yes. Staff Exhibit No. 114 reflects the  
memorandum dated February 14, 2000 the Staff submitted  
a two-page memorandum with four attachments  
representing written materials filed by Idaho Power,  
the Commission Staff, ICIP, and Astaris. Staff's  
written report labeled as Attachment D (Staff Exhibit  
No. 114, pgs. 51 - 56), noted that Staff examined the

1 off-system transactions for only the month of August  
2 1999 "and finds the adjusted Mid-C average daily price  
3 to be an acceptable price to use for these inter-book  
4 transfers. . . . The Staff concluded that the Mid-C  
5 price with the transmission adjustment is a fair and  
6 just pricing mechanism to use for the inter-book  
7 transfer [between operating and non-operating books of  
8 Idaho Power]." Staff Exhibit No. 114, p. 51.

9 The Staff Report also noted that Idaho  
10 Power customers "are not necessarily benefiting from  
11 the relationship shared with the energy trading  
12 activities." *Id.* Prior to the end of revenue sharing  
13 on December 31, 1999, customers shared the risks and  
14 any benefits from the energy trading contracts. Staff  
15 concluded that new discussions between the parties  
16 needed to be held to discuss risk, rewards, and  
17 allocations in basic rates.

18 Q. Was the Staff memorandum dated February  
19 14, 2001 submitted into the 1999-2000 PCA case record?

20 A. No, however, in Order No. 28358 issued May  
21 9, 2000, the Commission acknowledged that the Staff  
22 Report was previously filed with the Commission.  
23 However, the mention of the Staff Report addressed  
24 only ICIP's recommendation that the Commission  
25 initiate a new proceeding "to consider changes to rate

1 structure for Idaho Power." Staff Exhibit No. 115,  
2 Order No. 28358 at 5.

3 Q. Did the 1999-2000 PCA Order No. 28358  
4 (Case No. IPC-E-00-6) address hedging or the use of  
5 the Mid-C Price Index?

6 A. No. For this reason, the Commission  
7 should not infer from Greg Said's prefiled direct  
8 testimony at page 15, lines 6 - 16, that the  
9 Commission did so. The Commission "acknowledged the  
10 Staff memorandum addressing the accounting change  
11 concerns raised by opposing parties." But as he  
12 indicates in the next sentence, the accounting change  
13 alluded to by the Commission Order No. 28358 concerns  
14 the separation of "energy contracts" (i.e., operating  
15 transactions) from "energy trading contracts" (i.e.,  
16 non-operating transactions).

17 Q. What happened next?

18 A. IDACORP created the IDACORP Energy  
19 Solutions affiliate (IES) to be responsible for  
20 natural gas commodity trading. IDACORP expanded the  
21 IES duties to include the wholesale power market  
22 purchases and sales for Idaho Power. To formalize the  
23 relationship between the non-regulated affiliate (IES)  
24 and the regulated utility (Idaho Power), the Company  
25 filed an application on September 1, 2000 requesting

1 approval of a proposed Electric Supply Management  
2 Service Agreement ("the Agreement") between Idaho  
3 Power and IES. This was assigned Case No. IPC-E-00-  
4 13.

5 Q. In their prefiled direct testimonies  
6 Company witnesses Said and Gale imply that Commission  
7 Order No. 28596 in Case No. IPC-E-00-13 authorized the  
8 Company to utilize Mid-C Price Index for real-time and  
9 day-ahead transactions. Staff Exhibit No. 116, Order  
10 No. 28596. Do you concur with these assessments?

11 A. No, I believe the Company's reliance upon  
12 this Order is premature for several reasons. First,  
13 in the IPC-E-00-13 case, Idaho Power filed an  
14 application requesting approval of the proposed  
15 Agreement between Idaho Power and its unregulated  
16 affiliate, IES. Staff Exhibit No. 117. What the  
17 Staff and Company do agree upon is that Order No.  
18 28596 approved the adoption of the proposed Agreement.

19 Where the Company and Staff disagree is the effect of  
20 the adoption.

21 It is Staff's contention that by its  
22 explicit terms the Agreement and its Statement of  
23 Services (including use of the Mid-C Price Index in ¶  
24 5.1 of the Statement of Services) were not effective.

1 Staff Exhibit No. 117 at p. 7. However, paragraph 9  
2 of the Agreement provides

3 9. Commission Approval. This  
4 Agreement and any future amendments  
5 shall not become effective until the  
6 Commissions have issued their  
7 respective final orders approving the  
8 agreement or any future amendments.  
9 If the final orders of any of the  
10 Commissions initially approving this  
11 agreement contain material terms or  
12 conditions that either party finds  
13 unacceptable, within fourteen (14)  
14 days of the issuance of the order,  
15 the adversely affected party will  
16 have the right to cancel this  
17 agreement by giving thirty (30) days  
18 written notice of cancellation to the  
19 other party.

20 Staff Exhibit No. 117 p. 7 (Agreement ¶ 9 at p. 4)  
21 (emphasis added). The term "Commissions" specifically  
22 include the Idaho Public Utilities Commission, the  
23 Oregon Public Utilities Commission, and the Federal  
24 Energy Regulatory Commission. Staff Exhibit No. 117  
25 at ¶ 6 p. 7. Given the explicit terms of the  
Agreement, it is Staff's position that its operating  
terms, including the use of the Mid-C pricing  
mechanism, were not effective at the time this  
Commission issued its Order No. 28596 approving the  
Agreement on December 19, 2000.

Q. When did the Agreement become effective?

1           A.       By its own terms, the Agreement did not  
2 become effective until the Oregon PUC and FERC  
3 approved the Agreement. FERC conditionally approved  
4 the Agreement effective April 28, 2001. See Exhibit  
5 No. 118 (95 FERC ¶ 61,147 (2001)). FERC did not  
6 approve the Agreement as initially submitted.  
7 Instead, FERC required the Agreement to be modified to  
8 reflect that the Mid-C Price Index not be used for  
9 real-time transactions. Staff Exhibit No. 118 at pp.  
10 1-2. On May 14, 2001, Idaho Power and IES filed the  
11 requisite change to its pricing of real-time  
12 transactions. Staff Exhibit No. 119.

13           Q.       When did the Oregon Commission approve the  
14 Agreement?

15           A.       The Oregon PUC did not issue its approval  
16 until July 3, 2001. Staff Exhibit No. 120. Thus,  
17 under the terms of the Agreement, it was not effective  
18 until July 3, 2001 -- well after the end of the 2000-  
19 2001 PCA year.

20           Q.       Has the Company submitted the FERC  
21 required change to the Agreement for this Commission's  
22 approval?

23           A.       As of July 20, 2001, the Company had not  
24 filed an application requesting that the Idaho  
25

1 Commission approve the FERC required amendments to the  
2 Agreement.

3

4 **The Pricing Mechanism and Disputed \$51 Million**

5 Q. Did the Company provide any rationale for  
6 why it utilized the pricing mechanism contained in the  
7 Agreement even though the Agreement was not effective?

8 A. In Company witness Gale's direct prefiled  
9 testimony in the combined IPC-E-01-7 and IPC-E-01-11  
10 cases, he was asked a question about when the Company  
11 implemented any of the pricing mechanisms included in  
12 the Agreement. He replied:

13 Yes, the Company adopted the transfer  
14 price for real-time hourly  
15 transactions once the IPUC approved  
16 the Electric Supply Management  
17 Agreement. This change was  
18 implemented not because the Agreement  
19 had become effective, but because  
20 once the Agreement and the transfer  
21 pricing were approved by the IPUC,  
22 the Company viewed the new real-time  
23 transfer price as the appropriate  
24 price.

25 Prefiled Direct Testimony Gale at p. 6, ll. 10-  
16.

26 Q. Was the Company's use of the Mid-C Index  
27 effective on a going forward basis as of the date of  
28 the IPC-E-00-13 Order, December 19, 2000?

29

1           A.     No. Mr. Gale indicates that the Company  
2 made the change to real-time hourly pricing in  
3 December 2000. However, Company witness Hoyd testified  
4 the Mid-C pricing methodology was used to calculate  
5 its power purchase cost from April 2000 for the PCA  
6 calculation. Hoyd Prefiled Direct Testimony at 21,  
7 11. 5-9.

8           Q.     Idaho Power states that the market pricing  
9 mechanism it used was approved in Order No. 28596,  
10 Case No. IPC-E-00-13. Why should that be changed for  
11 the 2000-2001 PCA year?

12          A.     As previously stated, the allocations,  
13 separations and pricing mechanisms used in the PCA  
14 over the years has evolved. These changes may have  
15 been for part of a PCA year or for the full PCA year.

16          Each year the prior year mechanism was reviewed for  
17 reasonableness in the true-up audit.

18                 The Staff audit function and the Company's  
19 requirement to demonstrate the continued  
20 reasonableness of market pricing was the safeguard  
21 proposed and adopted by parties as part of the  
22 workshops and stipulation in IPC-E-00-13. Even with  
23 this safeguard, the Industrial Customers of Idaho  
24 Power remained uncomfortable with the mechanism and  
25 did not sign the stipulation. It would not have been

1 acceptable to Staff and other parties to endorse a 5-  
2 year contract between the parties without the burden  
3 remaining on the Company to show the continued  
4 reasonableness of the Mid-C Index as a surrogate for  
5 price.

6 The simple fact is that even if the  
7 Agreement had been in effect, the Company did not  
8 comply with the agreed upon documentation, oversight  
9 manager, and audit tracking mechanisms safeguards  
10 necessary to justify the reasonableness of its market-  
11 priced transactions.

12 Q. Was the retention of documentation of  
13 marketing transactions and decision-making a concern?

14 A. Yes. The lack of documentation retained  
15 by Idaho Power to support the decisions was a concern  
16 expressed during the audits since 1997, in Staff  
17 comments and during subsequent workshops. This lack  
18 of retained documentation continues to be a concern in  
19 this case.

20 The documentation concern now pertains to  
21 the pricing mechanism in addition to the  
22 assignment/allocation of transactions between system  
23 and non-system. Approval of the pricing mechanism in  
24 Case No. IPC-E-00-13 was prefaced on the continued  
25 review and ongoing improvements to the process. This

1 is no different than the process that had always been  
2 followed between the Staff and Idaho Power for the PCA  
3 review. In the instant cases, IPC-E-01-7 and IPC-E-  
4 01-11, the dollar magnitude is greater. The increase  
5 in this magnitude is partially due simply to the  
6 increase in transactions entered into by Idaho Power  
7 and now its affiliate IDACORP Energy. Any time  
8 transactions occur between affiliates, the necessary  
9 review and documentation required for separations,  
10 allocations or the pricing products are enhanced.  
11 Failure to require enhanced scrutiny of affiliate  
12 transactions could allow increased costs to be charged  
13 customers by manipulation of the affiliate  
14 relationship.

15 When Staff conducted its true-up audit of  
16 Company transactions made during the 2000-2001 PCA  
17 year, it discovered pricing concerns related to the  
18 ongoing reasonableness of using the Index pricing as a  
19 surrogate. These concerns must be corrected by  
20 allocating the higher transfer prices to the non-  
21 regulated operations. To this end, Staff recommends  
22 non-recovery of the \$51,234,902 (Idaho jurisdictional  
23 amount).

24 Proper safeguards must be implemented to  
25 address and eliminate these issues in the future.

1       Once objectives and safeguards are approved and in  
2       place, future true-up audits for prudence will focus  
3       on compliance with these objectives and safeguards.

4             Q.       Are there other reasons why the Commission  
5       should adopt the Staff's adjustment to power costs  
6       rather than using of the Mid-C Price Index?

7             A.       Yes.   Restricted to its context in the  
8       Case No. IPC-E-00-13, the Staff and the Company  
9       suggested that use of published market indices is an  
10      appropriate method for pricing transactions between  
11      regulated and non-regulated affiliates.   However, IES  
12      was not licensed by FERC to conduct trading activities  
13      until it received FERC approval on April 27, 2001.  
14      See Staff Exhibit No. 118. The trading was performed  
15      under Idaho Power's authority. The point here is that  
16      until the Commissions and FERC approved the Agreement  
17      between IES and Idaho Power, all power purchases were  
18      made by Idaho Power not IES. Because Idaho Power was  
19      purchasing energy for itself, ratepayers should not  
20      pay a price for that power that is significantly  
21      higher than its cost, even if the "price" was the  
22      market index.

23                    Idaho Power was asked in audit requests to  
24      supply vouchers, invoices or documentation supporting  
25      compliance with the terms of the contract. The

1 Company responded that the contract was not in effect  
2 since it lacked the required approvals. Consequently,  
3 the Company insisted the other provisions had not yet  
4 taken effect. The other provisions -- \$2 million  
5 annual credit, Idaho Power Oversight manager,  
6 implementation of audit tracking mechanisms -- were  
7 safeguards to insulate customers from potential  
8 affiliate abuse.

9 Even though the Company utilized the  
10 pricing mechanisms contained in the Agreement, the  
11 Company did not credit Idaho retail customers with the  
12 stipulated \$2 million. Direct Testimony of witness  
13 Gale, Case Nos IPC-E-01-7 and IPC-E-01-11 testimony at  
14 p. 4, ll. 6 - 9.) John R. Gale, Vice-President of  
15 Regulatory Affairs, notified the Commission in a  
16 letter dated June 29, 2001 that the "commitment to  
17 initiate the flowback obligation" of \$2 million  
18 annually, would go into effect on July 1, 2001. Staff  
19 Exhibit No. 121. Consequently, the pricing mechanism  
20 should go into effect no sooner than that date.

21 Q. Is it possible for a pricing mechanism to  
22 be reasonable at one point in time but not at another  
23 time period?

24 A. Yes. As markets change and the  
25 relationship between affiliated interests change, it

1 is possible for a pricing mechanism to be reasonable  
2 at one point in time but not at another. The  
3 magnitude of transactions also impacts the possibility  
4 that the reasonableness may change. When the level of  
5 market participation and the dollar prices are small,  
6 the transactions' reasonableness is more likely to  
7 fall within an acceptable band. As the transactions  
8 change, the level of activity and the price increase.

9 This exacerbates the differences between a surrogate  
10 or market price and the actual cost of the affiliate  
11 beyond an acceptable band, making it so the market  
12 price is no longer reasonable.

13 Q. Please explain the calculation for the  
14 pricing adjustment recommended by Staff.

15 A. For the months of December 2000, January  
16 2001 and February 2001, Staff has re-priced the day-  
17 ahead power purchased from the Non-Operating System to  
18 the System at the daily weighted average price paid by  
19 the Non-Operating System. That way, the System pays  
20 exactly what the Non-Operating System pays. The Non-  
21 Operating System should not be allowed to profit  
22 substantially from the regulated system. Staff  
23 believes that the weighted average price is fair and  
24 reasonable. It provides incentive to make sure that  
25 all trades are sound and reasonable for both the

1 system and non-system transactions with minimal  
2 ability to game or manipulate the price.  
3 Substantially greater margins on similar transactions  
4 for a non-regulated entity compared to a regulated  
5 entity is an indicator of an improper pricing  
6 mechanism. The magnitude of this adjustment is shown  
7 on Staff Confidential Exhibit Nos. 122 - 127. Staff  
8 Confidential Exhibit No. 122 shows the daily record  
9 for December 2000, Staff Confidential Exhibit No. 123  
10 shows the daily record for January 2001, and Staff  
11 Confidential Exhibit No. 124 shows the daily record  
12 for February 2001.

13 Consistent with the adjustment for the  
14 detailed audit for the three months listed above,  
15 Staff determined that the rest of the day ahead power  
16 for the PCA year should be re-priced using a weighted  
17 average monthly price. While not as precise as a  
18 daily price, Staff believes it is fairly  
19 representative. These months were not audited on a  
20 day by day basis due to time constraints. The months  
21 of August and September 2000 did not have adjustments,  
22 the transfer prices were already at the lower of cost  
23 or market, when compared to the weighted average  
24 monthly price for purchases, and at the higher of cost  
25 or market for sales. This adjustment is shown on

1 Staff Confidential Exhibit No. 125 for the months of  
2 April through November 2000.

3 Staff has made adjustments to the day  
4 ahead transactions for the months of April 2000  
5 through February 2001, with the exception of the  
6 months of August and September, and included them in  
7 the Non-Firm Purchases and Surplus Sales, Lines 19 and  
8 20 of the PCA calculation on Company Exhibits 1 and 3  
9 of Case Nos. IPC-E-01-07 and IPC -E-01-11,  
10 respectively. The net adjustment, before the  
11 jurisdictional and sharing allocations, and without  
12 the effect of interest on the deferral balance for the  
13 day ahead transactions is (\$61,467,386.84). The Idaho  
14 jurisdictional number is \$51,234,902. This represents  
15 a benefit to the customer. The calculation is  
16 summarized on Staff Exhibit No. 128.

17 In December 2000, the Company changed the  
18 way the Real Time Transactions were priced. In the  
19 past, the transactions always flowed through the  
20 system at their actual cost. Now, however, the  
21 transactions are priced based on the weighted average  
22 price of all real time transactions that touch the  
23 Idaho Power system on an hourly basis. According to  
24 Staff's analysis, this has also resulted in  
25 overcharges and underpayments in several cases. Staff

1 has re-priced the real time purchase transactions for  
2 the months of December 2000 through February 2001 to  
3 the lower of the Non System's cost or market price.  
4 Staff has also re-priced the real time sale  
5 transactions for the same months using the higher of  
6 sales price or market. Staff believes that purchases  
7 and sales should be kept separate and that the system  
8 should get the benefit of the best price.

9 The Staff made adjustments to the inter-  
10 book real time sales and purchases for the months of  
11 December 2000, and January and February 2001. The net  
12 adjustment, before the jurisdictional and sharing  
13 allocations, and without the effect of interest on the  
14 deferral balance, for the real time transactions are  
15 (\$4,666,381.95). This represents a benefit to the  
16 customer. The calculation is shown on Staff  
17 Confidential Exhibit Nos. 122 - 125 and summarized on  
18 Staff Exhibit No. 128.

19 **NOVEMBER TRANSACTION**

20 Q. Please explain what has been termed the  
21 'November transaction'.

22 A. The 'November transaction' is the  
23 transaction identified by Staff during the PCA audit  
24 as an adjustment in the true up. The Risk Management  
25 Committee (RMC) Minutes reflected a term transaction

1 for the system that was not completed. Staff adjusted  
2 the PCA results as if that transaction were completed  
3 resulting in a recommended removal of the higher  
4 priced replacement power from the recommended  
5 increase. Idaho Power claims the transaction was not  
6 completed because the RMC changed its decision later  
7 during the same meeting. The continued Staff review of  
8 this transaction and the explanation by Idaho Power  
9 does not change the Staff position.

---

10 Q. Please explain the operating plan.

11 A. The operating plan is a primary planning  
12 tool used by Idaho Power to operate the system and is  
13 a primary tool used by the RMC for its decision making  
14 related to the system. The operating plans are the  
15 documents provided to Staff to support the power  
16 purchase transactions, sales transactions and the  
17 decisions made by the RMC. The operating plans show  
18 the forecasts under the expected scenario, a best  
19 scenario and a worst scenario.

20 Q. What did the operating plans reveal that  
21 are available for the time of the RMC meeting on  
22 November 21, 2000 when the purchase decision was made  
23 for January?

24 A. The operating plans provided to Staff  
25 showed that under almost every scenario the system

1 would be short in January. The RMC minutes and  
2 available supporting documentation do not provide  
3 information to counter the original decision to  
4 purchase power for the system to cover the January  
5 shortage. Any subsequent information on pricing or  
6 other data was not reflected in the RMC minutes or  
7 retained to support the decisions made. Absent this  
8 documentation, the change of decision simply looks  
9 like a bad decision or an error that was contrary to  
10 the prudent decision originally made, and passes the  
11 detrimental cost to customers. These costs should not  
12 be recovered from customers. The decision not to  
13 purchase was made by the RMC and should be absorbed by  
14 the non-system operations.

15           Staff has adjusted the amount of the  
16 purchased power expenses in January 2001 by the total  
17 system amount of \$10,288,386, as shown on Staff  
18 Confidential Exhibit No. 127, that would have been  
19 saved if the RMC had completed the directive. All the  
20 documentation supports a forward purchase of power for  
21 the system. Rationale for a change of vote has not  
22 been provided. It is reasonable for Staff to adjust  
23 the purchase power expense to reflect the purchase as  
24 if it had been made. To do otherwise would pass the  
25 result of improper decision on to customers at their

1 expense.

2 Q. Why does Staff find the Company's  
3 explanation unpersuasive?

4 A. The operating reports available for  
5 review, the RMC minutes, and the subsequent events  
6 referenced by Idaho Power do not justify the reversal  
7 of this term transaction. The subsequent events do  
8 not reflect the same product for comparison. A  
9 longer-term product may be packaged to get a better  
10 deal overall even when one portion of the transaction  
11 would result in an imbalance for the system. Idaho  
12 Power could have been short in January but still  
13 packaged a deal that would sell power for the first  
14 quarter in exchange for power in the third quarter.  
15 These transactions are not mutually exclusive.

16 Q. In his testimony Darrel Anderson, Vice  
17 President - Finance & Treasurer, Idaho Power Company,  
18 explains why the system didn't need to purchase for  
19 January 2001. Do you accept his explanation as a  
20 portrayal of the complete facts?

21 A. No. Price trends from Idaho Power  
22 documents also reflect forward prices for January 2001  
23 increasing. While there may be several reasons for any  
24 increase, historical price trends were probably not  
25 the primary consideration. Recent price increases for

1 gas and electricity caused decisions by most traders  
2 to be based on other data, such as forward market  
3 prices, total trading position of IDACORP and Idaho  
4 Power. Staff Confidential Exhibit No. 129 summarizes  
5 the operating plan forecasts and the forward market  
6 price data available as documentation for RMC  
7 decisions. The November transactions relates to the  
8 November 21, 2000 RMC meeting. The documentation  
9 retained includes the operating plans for November 16,  
10 2000 and November 28, 2001 but not anything in  
11 between.

12 Exhibit No. 129 shows the operating plan  
13 documentation to sketch the transaction referred to by  
14 Company witness Anderson for the forward sale of power  
15 in the First Quarter of 2001 in exchange for the  
16 purchase of power in the Third Quarter of 2001. If  
17 market prices were higher in the third quarter than  
18 the first quarter, Mr. Anderson's claim that they  
19 wouldn't sell if short might not be completely  
20 accurate because line 24 of Staff Exhibit No. 129  
21 shows they completed the opposite where they were  
22 buying for the third quarter when September was  
23 forecasted to be long. This exhibit shows how forward  
24 market prices and inventory may have been greater  
25 factors for consideration than absolute balance of the

1 system forecasted need.

2 Q. Please explain how these problems can be  
3 avoided in the future.

4 A. Proper documentation to support prudent  
5 decisions should include information supporting the  
6 decision or change in decisions and the rationale if  
7 the decision made is not directly supported by the  
8 available data. All charts or discussion papers must  
9 be retained as support. The PCA review is conducted  
10 at least annually. This is a reasonable time frame for  
11 the Company to retain such documentation. If the  
12 decision can not be shown to be prudent at the time it  
13 was made, the associated expenses should not be  
14 recovered from the regulated customer but should be  
15 assigned to the non-system operation or recorded below  
16 the line.

17

18 **REQUIRED OBJECTIVES AND SAFEGUARDS**

19 Q. Please provide an overview of the  
20 objectives you believe Idaho Power must implement  
21 related to trading activities and risk management.

22 A. Idaho Power is responsible for providing  
23 power at a reasonable cost to its customers. To  
24 assure the costs are reasonable, Idaho Power must  
25 maintain documentation and RMC minutes reflecting the

1 data available and considered in making its decisions.

2 When a product or service is provided to the  
3 regulated utility from an affiliate or non-regulated  
4 operation, the review by the Commission Staff of those  
5 transactions must be enhanced. Therefore Idaho Power  
6 must retain and provide additional documentation above  
7 that required for a third-party transaction.

8 The objectives I recommend the Idaho Power  
9 focus on include the following categories: 1) term  
10 transaction decision management and documentation, 2)  
11 forecasting documentation, 3) risk management profile  
12 measures, 4) performance standards and 5) transfer of  
13 value evaluations. These objectives, as further  
14 discussed by Staff witness Thomas J. Lord, will  
15 provide parties to Idaho Power cases additional  
16 opportunity to review the decision making process of  
17 Idaho Power and ensure that customers are paying  
18 reasonable prices for power. The affiliate  
19 relationship and the transfer pricing mechanisms are a  
20 major portion of the review conducted by Staff and  
21 parties to assure the transfer prices are and remain  
22 reasonable.

23 Q. Would you anticipate that the lower-of-  
24 cost or market for purchases and the higher-of-cost or  
25 market for sales continue now that IDACORP Energy is

1 in full operation and in separate facilities from  
2 Idaho Power?

3 A. I believe market pricing for the intra-  
4 month transactions will be the appropriate pricing  
5 mechanism once the control objectives are quantified  
6 and operational. Staff recommends for the current  
7 filings, IPC-E-01-7 and IPC-E-01-11 that the following  
8 pricing mechanisms apply to all day ahead  
9 transactions:

10 1. Purchases by Idaho Power from the non-  
11 operating book for the system should be priced at the  
12 lower of cost or market. Staff recommends that the  
13 market price continue to be based on the Mid-C price  
14 or another acceptable pricing mechanism approved by  
15 the Commission.

16 Staff further recommends that the cost be  
17 based on the actual cost of the power, using a daily  
18 weighted average of the price actually paid for the  
19 power by the non-operating book to third parties.

20 2. Sales from Idaho Power from the operating  
21 book to the non-operating book should be priced at the  
22 higher of cost or market. Staff recommends that the  
23 market price continue to be based on the Mid-C price  
24 or another acceptable pricing mechanism approved by  
25 the Commission.

1                   Staff further recommends that the cost be  
2 based on the actual price of power sold to third  
3 parties.

4                   These pricing recommendations will provide  
5 the ratepayer with the assurance that they will not  
6 pay rates based on prices that are unfair, unjust and  
7 unreasonable.

8                   The Company, Staff and other interested  
9 parties should work together to develop the objectives  
10 and safeguards. This is critical to ensure the  
11 reasonableness of using an Index as a surrogate for  
12 actual costs going forward in IPC-E-01-16. The  
13 continued cooperative efforts are necessary to achieve  
14 a workable solution. Idaho Power has informally  
15 indicated they favor the proposed process. The  
16 resulting objectives and safeguards should be  
17 presented to the Commission for approval or rejection  
18 in the order issued in Case No. IPC-E-01-16. These  
19 efforts will be made between now and the hearing in  
20 these cases.

21                   Absent appropriate safeguards, Staff will  
22 continue to propose lower-of-cost or market for  
23 purchases and the higher-of-cost or market for sales  
24 as the only transfer pricing mechanism to assure there  
25 in no affiliate manipulation and that customers are

1 charged fair, just and reasonable rates.

2 **RISK MANAGEMENT COMMITTEE**

3 Q. Please provide an overview of the Risk  
4 Management Committee?

5 A. During the 2000 - 2001 PCA year, the Risk  
6 Management Committee (RMC) consisted of IDACORP and  
7 Idaho Power officers. These members are listed on  
8 Exhibit No. 130 as provided in Response to Staff  
9 Production Request No. 1. No member solely  
10 represented the interests of Idaho Power and its  
11 customers.

12 According to Idaho Power, "The purpose of  
13 the RMC is to maintain general oversight over all  
14 commodity trading and financial risk management  
15 operations." Response to Staff Production Request No.  
16 3. The decision-making process of the RMC is  
17 explained in Response to Production Request No. 4.

18 The RMC reviews operating proposals  
19 prepared by Idaho Power Company  
20 personnel. The proposals include  
21 assumptions for supply and demand  
22 requirements based on data available  
23 at that time. Based on the results  
24 of this data, the collective  
25 experience of the committee members,  
other pertinent internal and external  
data, and an in-depth discussion  
between committee members, decisions  
are made to determine the need to buy  
or sell energy. Numerous factors are  
considered in coming to these  
decisions including weather, expected

1 load requirements, current snowpack,  
2 transmission availability, pricing  
3 and the overall system portfolio  
4 position. When it is determined that  
5 an action is required, a  
6 recommendation is made by a committee  
7 member and put to the entire RMC for  
8 a vote. A majority is required to  
9 confirm a transaction for inclusion  
10 in the operating plan.

11 Staff expressed concern in its comments  
12 filed on April 16, 2001 in these cases that the RMC  
13 consists of the same members for both the utility and  
14 for the non-regulated operations. Staff review of the  
15 RMC minutes indicates that the Committee does not  
16 consistently support a mandate to first take care of  
17 the system needs **before** the non-regulated operations,  
18 even though this is the stated policy. Based on a  
19 review of the minutes, Staff believes that the RMC has  
20 not focused enough energy on the utility and as a  
21 result, system costs are higher than they otherwise  
22 would have been.

23 Recently the Risk Management Committee was  
24 split into two committees, an IDACORP Energy Risk  
25 Management Committee and an Idaho Power Risk  
Management Committee. The current members of the  
committees are listed on Exhibit No. 131. This split  
should allow the respective committees to focus more  
directly on its primary responsibilities. The non-

1 operating group, now IDACORP Energy can focus on non-  
2 regulated matters and the Idaho Power RMC can focus on  
3 matters pertaining to the regulated operations.

4 Q. Does this conclude your direct testimony  
5 in these cases?

6 A. Yes, it does.
