*Re: Idaho Power's Application for Residential Air Conditioner Cycling Program, Case No. IPC-E-04-27*

*If this program remains voluntary, this might be ok. I assume that the safety of seniors, that may participate, has been considered. Pilot program indicated only about 2 degrees rise in temperature inside residence. Is this guaranteed? What kind of safety measures are to be in place to prevent dangerous temperatures inside residences?*

*Some seniors can't make prudent decisions for themselves and they need to be protected. Please advise.*

*Concerned,
