Comment description: Please do not approve any rate increases at this time. We simply can't afford it, and Idaho Power simply doesn't deserve it. We still haven't been compensated for the inflated prices it charged during the Enron era. There should be no rate increase until that happens.

Comment_description: I believe IDACORP President and Chief Executive Officer Jan B. Packwood spoke very plainly in Idahcorp's thrid quarters earning statement as to why you should not allow this rate increase to resolve. He said "We continue to see good performance from Idaho Power at the operating level with record growth in customers resulting in increased sales at higher prices." If they are receiving record customers using electricity at higher prices then why are they asking for an increase? Isn't 56 million in net income enought for them and thats only in 3 quarters. Besides that they are only down 2 million in net income after 3 quarters this year and some of that was due to a accounting reversal. Figuring on 3 quarters only, why do they need 4 million more in profits?

Thanks for your time,

Thron Van Komen
