**Subject:** RE: Your Comments Regarding Case No. IPC-E-06-17

Dear Jean Jewell,

Thank you for your e-mail. I'm glad you received the printed comments. If you did not receive the revised e-mail it's possible Idaho Power did not also. I will resend it to Maggie Brilz, Barton Kline, and Monica Moen as requested by the application.

A small piece of useful information regarding the case. In the September "Customer Connection" by Idaho Power it states "the first 300 KWH are billed at 5.4 cents per kwh, while every kwh used over 300 is billed at 6.1 cents per KWH". My neighbor runs his ac 24/7 and I'm guessing uses 80 KWH per day. So, in less than 4 days he is paying 6.1 cents per KWH. My point is Idaho Power is paying me 5.4 cents per KWH and selling my surplus to my neighbor for 6.1 cents a KWH. Doing the math this is a 13% markup (profit) for Idaho Power which differs from Idaho Power's statement "pays customers more than the actual value of the generation itself". On page 1 of the case.

Regards,

John Weber
