Subject: comment on IPC-E-06-21

Members of the Idaho Public Utilities Commission:

Please require Idaho Power to purchase energy from alternative sources like wind power farms. If you allow Idaho Power to dictate the future of energy in Idaho, we will be going down the wrong path - coal fired plants in Idaho, more CO2, more global warming, and we'll all be in worse shape than ever. Utilities must change their way of doing business to bring in the safer alternatives like wind and solar. Even if they have to pass on the cost of new transmission lines to the customers (and I am one of those customers) it is better than business as usual! Thanks you for reading my comment.

Sincerely,

Jay C. Hormel
