I definitely support wind generation and urge you to grant the sales agreement between Idaho Power Co. and Magic Wind Park LLC.

In a separate matter, I definitely OPPOSE nuclear generation as a source of energy, especially since Idaho is still struggling with getting the government to clean up radioactive spills and mismanagement at the Idaho National Laboratory. The people of Idaho deserve renewable and clean energy.

Please note I am a strong supporter of Wind Generated Energy and believe that more renewable energy means less consumption of fossil fuels. I support IPUC entering into a sales agreement with Magic Wind Park, LLC.

Also, I am against nuclear generation as a source of energy due to the waste disposal problem.

Thanks for your consideration.

Theresa Williams

Please describe your question or comment briefly:
Dear PUC Commissioners,

I and my family are appalled that the Idaho Public Utilities Commission has been so short sighted , as to not have been making plans and implementing them in preparation for anyone who might wish to 'farm' wind to hook up to the grid. Green energy has been discussed for at least the last 50 years. and viable for at least the last 20 . By now one would think that the Idaho PUC would have displayed some forethought and made preparations for the inevitability of 'Green Energy.'

People tell us how beautiful Idaho is. But slowly the 'powers that be' are suffocating that beauty through poor, short sighted and greedy choices in the name of progress and the protection of Idaho citizens. How can filling our skies with carbon; nitrogen; carbon monoxide; aldehydes; nitrogen dioxide; sulphur dioxide; polycyclic aromatic hydrocarbons; as well as carbon dioxide,mercury, sulfur and particulate matter be a blessing to Idaho Citizens??? These not only ruin our air quality, they also move throughout the chain contaminating our water and soil, which in turn contaminate our bodies. Imagine members of your own families suffering breathing problems, and then imagine how bad they will be if we do not work to employ more 'Green Energy.' If you care about your families, as I do mine, then you have a not so good image of how they might suffer if we do not curb our use of energy that will corrode and distroy our world.

I agree with so many that believe that such a serious decision should be a very public decision. Please allow the citizens who live in Idaho to decide how Idaho will create its energy. A few should not decide what is good for all.

As to that \$60 million dollars the power company is saying Mr. Grover should pay to hook his wind farm up to the power grid...maybe we should take a little of the agriculture subsidies away from the dairy owners and the crop farmers and share them with the Wind farmers. Farming is farming right? And we should be farming the wind to help keep Idaho livable.

Thank you for your time,

Please describe your question or comment briefly:

I am in favor of a sales agreement between Idaho Power and Magic Wind. I am however concerned about what the limit of not generating more than 10 average megawatts on a monthly basis might mean to the economic of the Magic Wind or other wind sites. I would like some clarification on this as I have heard several different interpretations. One said that Magic Wind would be penalized if they went over, another said that only the first 10 MW would be at the PURPA rate and that any overproduction would be at market rates. I do not believe that it is in the public interest to create artificial roadblocks to developing renewables. We need to first get our energy consumption house in order and then fill any production void with renewables.

Please describe your question or comment briefly:

It would appear to me that Idaho PUC should be encouraging ALL renewable power sources for the benefit of all users. Idaho Power should be encouraging Wind Farms of all sizes to augment our existing Power generating activity. Any added costs should be borne by all rate payers even if it will mean some rate increases. If todays world of Greenhouse gas/Global warming issues, Idaho need to be in the forefront since we have so many potential renewal sources at hand. (Wind, Water, Geothermal water). An arbitrary cutoff of 100Mgwats seems unreasonable by Idaho Power.

I think that Idaho Power or any other utility company in Idaho has to buy electricity produced with renewable energies with a higher limit than right now (100 kilowatts). In my opinion, the old limit of 10 Megawatts and even higher would be far more beneficial to Idaho and its population by increasing the installation of newer and more efficient renewable energy projects e.g. wind turbine parks, solar parks or geothermal energy projects. This would also lead to the creation of jobs in the area of maintenance, research and development in our state by giving smaller and bigger companies the chance to invest money in Idaho's renewable energy sources.

Please describe your question or comment briefly:

We live on the Snake River in Hagerman Valley and look across at 7 beautiful windmills owned by Armand Ekert. This site is a perfect place for wind generation. I have been told that he wants to build more and that Idaho Power has been difficult for him regarding building more due to the fact that Idaho Power doesn't make enough money. We need more windpower. We need more clean, renewable energy. We also need to promote geothermal energy. We do not want coal power plants that would pollute and harm the environment and the people.

Thank you, Leslee Reed

I hope that you will consider this sales agreement and go forward with it. Idaho needs clean, renewable energy. We also need to do business with local people like Mr. Eckert, rather than inviting companies like Semptra in to pollute our air and cheat us out of a great way of life. Wind is free, wind is clean.... and it never goes away!

Please describe your question or comment briefly:
We encourage you to enter into the proposed sales agreement with Magic Wind Park LLC to produce not more than an average of 10 megawatts; Magic Wind Park LLC should remain exempt from the size limit you enacted earlier this year.

We further encourage you to rescind that size of 100 kilowatts and restore the 10 megawatt size limit for small producers of renewable energy to receive the special buy back rate as required by the Public Utility Regulatory Policies Act of 1978 (PURPA). It is imperative that Idaho move forward in pursuing the use of renewable energy sources. Idaho Power should be encouraged to stop relying on coal-fired and nuclear produced energy; they have been repeatedly proven to be unsafe for our health and our environment.

Idaho Power still has plenty of economic incentives to pursue renewables (wind, solar, geothermal) and to upgrade hydroelectric producing facilities in our state. It plans to have significantly more paying customers by 2013.

The cost of upgrading transmission lines should be paid for by Idaho Power; it stands to gain a good deal in revenues and positive public image not only in Idaho but in other states by taking a leadership role in conservation of energy and decreasing our reliance on dirty and unsafe energy production by encouraging these small producers who are willing to take the risks to develop renewable energy sources.

There is no time like the present to move forward progressively.

Thank you, Kathleen and William Tanaka

In light of the application by Idaho Power Co. to enter into a sales agreement with Magic Wind Park LLC, I like to give my whole-hearted support for wind generation . More renewables means less fossil fuels, and so wind power is obviously the most environmetntly reponsibile answer!

Also I am competely against nuclear genreation as a source of energy. Idaho Power recently announced plans to use nuclear generation which is appaling in light of the announcement that the federal government is finally stepping up and cleaning up radioactive spills and mismanagement at the Idaho National Lab and the cost will be almost \$2 billion. And if that's not bad enough, they say the water in our aquifer should meet safety standards again by 2095 or something like that. We want renewable and clean energy.

My family and I are in full support of wind power projects (Magic Wind Park). Idaho needs to stick to renewable sources of energy production. Let's keep our air and water clean. We are strongly in opposition to any coal plant projects or nuclear power projects. We already have a big mess in southern Idaho and will cost 2 billion for starters to clean it up! Let us be a smart state and stick to clean renewable sources of energy!! Our kids depend on it!

Please consider more renewable resources for energy. It is the single most important issue you should consider. Our children need a cleaner environment to live in and there are so many ways to improve energy. My third grader is learning about renewable resources and our country only provides 6% of their resources to renewable energy. Other Countries are ahead of us and Idaho can lead the way. Please take this seriously as we need to try harder at improving our renewable resources. They are plentiful. Thank you so much, Mary Ann Snyder
