Attorney for the Commission Staff

BEFORE THE IDAHO PUBLIC UTILITIES COMMISSION

IN THE MATTER OF THE APPLICATION OF IDAHO POWER COMPANY FOR AUTHORITY TO IMPLEMENT POWER COST ADJUSTMENT) CASE NO. IPC-E-07-10)
(PCA) RATES FOR ELECTRIC SERVICE FROM JUNE 1, 2007 THROUGH MAY 31, 2008.) COMMENTS OF THE COMMISSION STAFF)

The Staff of the Idaho Public Utilities Commission, by and through its Attorney of record, Donald L. Howell, II, Deputy Attorney General, respectfully submits the following comments in response to Order No. 30302, the Notice of Application and Notice of Modified Procedure issued on April 18, 2007.

BACKGROUND

On April 13, 2007, Idaho Power Company filed its annual Power Cost Adjustment (PCA) Application. Since 1993, the PCA mechanism has permitted Idaho Power to adjust its rates upward or downward to reflect the Company's annual "power supply costs." Because of its predominant reliance on hydroelectric generation, Idaho Power's actual cost of providing electricity (its power supply cost) varies from year-to-year depending on changes in streamflow and the market price of

power. The annual PCA surcharge or credit is combined with the Company's "base rates" to produce a customer's overall energy rate.

In this PCA Application Idaho Power requests recovery of \$30.7 million of above normal power supply costs. The Company estimates that this represents a \$77.5 million increase in revenues from existing PCA rates (which are below normalized base rates), or an average increase in rates of 14.5%. Attachment A to these comments is a graphic that shows the history of Idaho Power's residential energy rates and identifies the PCA component.

STAFF AUDIT AND ANALYSIS

The PCA has three components: 1) a projection component; 2) a true-up component that corrects for the previous years projection error; and 3) a true-up of the previous year's true-up that is a final correction. Set out below are the Staff's comments on the three PCA components.

A. The PCA Projection

The National Weather Service Northwest River Forecast Center in Portland, Oregon, forecasts the April through July Brownlee Reservoir inflow this year to be 3.30 million acre-feet (maf). This is only 52% of the average inflow. A regression equation developed from the results of a power supply model run is used to project "Net Power Supply Costs." *See* Order No. 24806 and Staff Attachment B. Using the forecasted 3.30 maf and the regression equation, Staff calculates Net Power Supply Costs for April 2007 through March 2008, to be \$75,497,940. As authorized by Commission Order, Staff increased the calculated Net Power Supply Costs by expected PURPA qualifying facility purchases of \$54,632,157 and reduced the amount by the expected net benefit of cloud seeding \$895,462 (\$1,004,538-1,900,000) to generate an expected PCA expense of \$129,234,635. This is approximately \$28.3 million above normal power supply cost levels on a total company basis. Staff found that its calculation agreed with Idaho Power's calculation. The calculation of the projection rate component is shown on lines 1 through 6 of Attachment C, where the projection rate component agrees with Idaho Power's calculation.

¹ Base rates were established by the Commission in Idaho Power Case No. IPC-E-05-28.

B. The PCA True-up

The PCA True-up captures the difference between the projected power supply costs from the past PCA year and the actual power supply costs that the Company incurred during that same year. Rates were set in the previous PCA period to collect or refund to customers the difference between the projected power supply costs and those costs reflected in rates. The differences between projected power supply costs and actual power supply costs is the PCA deferral balance. This deferral balance, when surcharged or refunded to customers is known as the PCA True-up component.

Exhibit No. 3 to Idaho Power witness Schwendiman's testimony illustrates the calculation of the true-up deferral amount. Attachment D is Staff's calculation of the true-up deferral amount. Staff found no differences in methodology or amounts from those presented by the Company.

As shown on Page 2 of Attachment D, line 64 in the "Totals" column, the true-up amount with interest is \$42,115,284. The true up amount used by the Company to calculate the true up rate also included an Emission Allowance tax benefit of \$27,025,013, which is not included in Company Exhibit No. 3 or Staff Attachment D. In rounded numbers the true up amount, including the emission allowance tax benefit, is composed as follows:

<u>ITEM</u>	MILLIONS
Last Year's Projection (Rebate)	\$ 19.7
90 % of Last Year's Above Normal Power Supply Costs	\$ 68.2
Last Year's Above Normal PURPA Facilities Costs	\$ (1.6)
Emission Allowance Sales Credit	\$(42.1)
Miscellaneous Adjustments (Lines 49, 50)	\$ (1.6)
Interest	\$ (0.5)
True Up Expense (Deferral)	\$ 42.1
Emission Allowance Tax Benefit	P(27.0)
Emission Anowance Tax Benefit	\$(27.0)
Total True Up Deferral with Emission Tax Benefit	\$ 15.1
Total True of Deterral with Emission Tax Denem	Ф 15.1

To verify revenues and costs associated with Idaho Power's true-up deferrals, Staff conducted an audit of all actual revenues and expenses that occurred during the PCA year. These revenues and costs included the cloud seeding program, fuel expenses for coal, fuel expenses for gas, and power purchases and sales. Staff also examined PCA Settlement Agreement Credits from Order No. 29600, Emission Allowance Sales Credit from Order No. 30041, and the Risk

Management operating plans. The following items are included in the PCA true-up:

- 1. Water Lease Purchases. Idaho Power entered into an agreement to purchase 5,000 acre-feet of water (an acre foot of water is enough water to cover an acre, one foot deep) for \$14 per acre-foot. The total cost of \$70,000 was offset by an agreement with Powerex Corporation. In exchange for the release of the irrigation water, Powerex agreed to pay Idaho Power \$7,500. Idaho Power leased the water from Water District 63 in Lucky Peak Reservoir through the Water Supply Bank. Although not a normal, recurring PCA line item, the terms of the agreement for the water lease purchase are reasonable and recovery through the PCA is reasonable because the water is equivalent to fuel for power. The actual water lease purchase expense of \$62,500 is a cost to customers and is subject to jurisdictional allocation and 90/10 sharing.
- 2. Cloud Seeding Program. Idaho Power spent approximately \$1,108,094 on cloud seeding program costs during the prior PCA year. Beginning in October 2006, upon the completion of the general rate case, IPC-E-05-28 and the issuance of final order, Order No. 30035, monthly cloud seeding expenses and benefits were incorporated into base rates. The net benefit from the cloud seeding program that is included in base rates for this deferral year (October 2006 through March 2007) is \$895,462. The actual amount of cloud seeding expense for the PCA period from April 2006 through March 2007 is \$804,603. Actual expenses are less than the net benefit included in base rates by \$90,559. This represents a benefit to customers and is subject to jurisdictional allocation and 90/10 sharing.
- 3. <u>Fuel Expense Coal.</u> A large portion of Idaho Powers electricity comes from thermal power produced from coal plants. The three coal plants that Idaho Power owns an interest in are Bridger, Valmy, and Boardman. For the audit period of April 2006 to March 2007 the total coal expense for all plants in operation was \$110,532,921. The total coal expense included in base rates is \$95,138,364. The increase or decrease in the coal expense from base rates is included in the PCA for recovery from or refund to customers. This year's PCA deferral balance includes a difference between costs currently included in rates and actual costs of \$15,394,557. This cost is subject to jurisdictional allocation and 90/10 sharing.
- 4. <u>Fuel Expense Gas.</u> Idaho Power owns two gas-fired combustion turbine generating plants, Danskin and Bennett Mountain. These plants are both located near Mountain Home and account for 100% of gas usage. For the audit period of April 2006 to March 2007 the total variable gas and gas transportation expense for both plants was \$8,181,907. The total gas and gas transportation expense included in base rates is \$4,451,500. The increase or decrease in gas

expense from base rates is included in the PCA for recovery from or refund to customers. In this year's PCA deferral balance, the gas expense that is included for future recovery from customers is \$3,730,407 and is subject to jurisdictional allocation and 90/10 sharing.

5. Power Purchases and Sales. During the PCA year ending March 31, 2007, the Company sold surplus power totaling \$205,529,288, while total power purchases, excluding PURPA contracts, were \$224,881,906. The total surplus sales included in base rates is \$64,162,300 and the total power purchases included in base rates is \$11,842,800. The increase or decrease in the power sales and purchases from base rates is included in the PCA for recovery from or refund to customers and is subject to jurisdictional allocation and 90/10 sharing. Actual surplus sales exceeded base amounts by \$141,366,988. This cost difference is a benefit to customers. Actual purchased power amounts exceeded base amounts by \$213,039,106. This cost difference becomes a cost to customers. Net surplus sales (surplus power sales greater than power purchases) of \$52,319,500 are built into base rates. In this PCA year, actual power purchases exceeded surplus power sales by \$19,352,618. The difference between what is built into base rates and the actual expenditures is captured in the PCA deferral. The net of the power purchase difference and the surplus sales difference included in this PCA year for recovery (cost to customers) is \$71,672,118. This amount is subject to jurisdictional allocation and 90/10 sharing.

Staff reviewed the power purchases and sales in conjunction with the Company's Risk Management Operating Plans. Our analysis did not find any transaction that was not reasonable or did not follow the Risk Management Committee's recommendations. These transactions were made with an assortment of credit-worthy partners on a timely basis, and there were no transactions conducted with an Idaho Power affiliate.

6. Emission Allowance Sales Credit. In June 2005, Idaho Power Company filed an application requesting blanket authority to sell surplus sulfur dioxide (SO2) allowances; and an accounting order to provide for recording any sale(s) of such allowances. In Order No. 30041, Case No. IPC-E-05-26, the Commission approved and adopted a stipulation providing for the inclusion of the SO2 allowance sales proceeds in the Company's annual PCA, with 90% of the net proceeds to be passed on to customers, and 10% of the net proceeds to be retained as a shareholder benefit. The Commission also ordered that the net of tax, 90% portion of the proceeds allocated to customers in the Stipulation, shall be grossed-up to recognize the tax savings that will accrue when the 90% credit is provided to customers through the PCA.

The Commission found the PCA, which is designed to track and true-up abnormal power supply costs and revenues, to be the logical mechanism to track and distribute proceeds from the sale of excess SO2 allowances. SO2 allowances are allocated to the Company based on the ownership and operation of its thermal/coal powered plants. Excess allowances are a direct result of many factors associated with the operation of the coal plants including installation of environmental equipment, the geographic location of the plant, the total time the plant is operated, the nature of the coal used to fuel the plant, as well as other factors. The allowances accrue as a direct result of plant operation and ownership in much the same way that energy generated from the plant is used to meet ratepayer demand and generate surplus sales revenue to offset plant-operating costs. To the extent that coal costs, environmental costs, and surplus energy sales increase or decrease costs, the cost differences are captured in the PCA and passed through to customers. It is logical that SO2 allowances pass through in a similar manner.

The net proceeds of the emission allowance sales are \$81,647,500. The Idaho jurisdictional portion is \$76,807,243. The 90% portion to be passed on to customers is \$69,126,519, which is the customer benefit after tax amount of \$42,101,506 and the tax benefit amount of \$27,025,013. The emission allowance sales credit has been properly accounted for in the PCA deferral calculation.

7. Actual Qualifying Facilities Purchases including Net Metering. A Qualifying Facility (QF) is a generating facility which meets the requirements for QF status under the Public Utility Regulatory Policies Act of 1978 (PURPA) and part 292 of the Federal Energy Regulatory Commission's Regulations (18 C.F.R. Part 292), and which has obtained certification of its QF status.

There are two types of QFs: cogeneration facilities and small power production facilities. Qualifying Facilities are sometimes referred to as cogeneration/small power producers or by the acronym CSPP.

A Cogeneration Facility is a generating facility that sequentially produces electricity and another form of useful thermal energy (such as heat or steam) used for industrial, commercial, residential or institutional purposes, and otherwise meets the requirements of 18 C.F.R. §§ 292.203(b) and 292.205 for operation, efficiency and use of energy output.

A Small Power Production Facility is a generating facility whose primary energy source is renewable (hydro, wind, solar, etc.), biomass, waste, or geothermal resources, and that otherwise meets the requirements of 18 C.F.R. §§ 292.203(a), 292.203(c) and 292.204. Small power production facilities are limited in size to 80 MW, with the exception of certain types of facilities

certified prior to 1995 and designated as "eligible" under section 3(17)(E) of the Federal Power Act (FPA) (15 U.S.C. § 796(17)(E), which have no size limitation.

Idaho Power has many contracts with qualifying facilities. For the audit period of April 2006 to March 2007 the actual QF expense is \$52,320,145. The QF expense included in base rates is \$54,059,005. The increase or decrease in the QF expense from base rates is included in the PCA for recovery from or refund to customers. In this year's PCA deferral balance, the actual QF expense was less than the base QF by \$1,738,860. This amount is a benefit to customers and reduces the PCA deferral balance. It is not subject to the 90/10 sharing due to the nature of PURPA contracts in that the Company must purchase the output of the Qualifying Facilities. It is subject to jurisdictional allocation.

- 8. Settlement Agreement (Order No. 29600). In a Stipulation involving Idaho Power and the Commission Staff, both parties agreed on a single comprehensive settlement amount to resolve several outstanding issues identified in the Stipulation. The parties proposed that the expense adjustment rate for growth (EARG) component in the PCA would continue at the existing value, 16.84 mills per KWH, until the next general revenue requirement case in which the Commission resets the base rates used for PCA computation purposes. Idaho Power also agreed to provide a \$19.3 million revenue credit to Idaho Power Customers in the Company's PCA. This revenue credit is a separate \$804,166 monthly line item for the months June 2004 through May 2006 in the PCA true-up calculation and includes interest from June 1, 2004 at the PCA carrying charge rate. It was also agreed that the June 2003 Valmy Unit No. 2 incident issues should be resolved in the PCA. The Commission approved the Stipulation in Order No. 29600 issued in September 2004. Staff verified that all settlement components of the Stipulation were incorporated in this PCA Application. The Company has included the proper monthly credit of \$804,167 for customers for the months of April and May of 2006, the final two months of the credit resulting from the settlement agreement approved in Order No. 29600.
- 9. Bennett Mountain Credit. In Order No. 29790, Case No. IPC-E-05-10, the Commission approved recovery of Bennett Mountain power plant costs and required that the related reduction in power supply expense be included in the Company's 2006-2007 PCA. The Company has included the proper monthly amount to reflect the reduction in power supply costs resulting from the Bennett Mountain power plant. The credit began in June 2005 and was to run for 12 months. The current deferral balance includes the final two months of the credit. This credit totals \$7,972 and is not subject to the 90/10 sharing.

In final analysis the PCA Forecast and True Up methodology produced an unexpectedly large surcharge deferral balance. The PCA year beginning April 2006 was forecasted to be an above normal water year with below normal power supply costs. A negative forecast rate component was established which credited customers \$19.7 million dollars during the true up period. Actual power supply costs captured in the true up calculation were \$64.5 million above normal. This amount combined with the forecast credit would have produced a true up amount of \$84.2 million. This is a very large amount to accrue in a good or even normal water year. It is only the application of \$69.1 million of non-recurring SO2 Emission Allowance Sales benefits that brought the true up amount down to the \$15.1 million balance subject to recovery. Without the Emission Allowance Sales benefits the true up amount and rate would have been extremely high in a water year that turned out to be about normal. This result was caused by a number of factors. Base power supply costs are outdated because normalized power supply costs from 2003 are still being used for PCA purposes. These costs were not updated in the IPC-E-05-28 general rate case because of concerns over the AURORA modeled power supply results presented by the Company in that case. The Load Growth Adjustment Factor is also outdated. The factor used during the true up period in this case was \$16.84 per MWh. At \$16.84 per MWh \$10.1 million was adjusted out of the true up amount. The Load Growth Adjustment factor is to be \$29.41 per MWh for the next PCA year, which if used last year would have almost doubled the load growth adjustment amount (Case No. IPC-E-06-8, Order No. 30215 dated January 9, 2007). Staff believes that Load Growth Adjustment Factors based on real marginal costs could be much higher. Staff plans to review these and other issues affecting PCA deferral balances as a part of Idaho Power's upcoming general rate case.

C. The PCA True-up of the True-up

The PCA true-up of the true-up amount is the difference between what was anticipated to be collected or refunded when the PCA rate for the true-up was set and what was actually collected or refunded. When special adjustments are not carried into the true up of the true up calculation, the amount represents the under or over recovery of the true up amount from the previous year due to a different amount of kWh being sold than was anticipated in the rate design. The true up of the true up is a benefit to both the Company and customers because any over-collection is returned to customers, and any under-collection is recovered by the Company.

The true-up amount set for recovery in last year's PCA case (IPC-E-06-07) was negative \$39,513,704 and the rate calculated to return that amount to customers was -0.3113 ¢/kWh. With

other adjustments and interest considerations, the approved rate under refunded the true-up amount by \$7,941,094. As shown on Attachment C, line 13, this amount is used to calculate the true-up of the true-up PCA rate component of -0.0589 ¢/kWh. This is the same rate the Company calculated.

PCA RATES

The Staff's calculated PCA rate of $0.2419 \, \text{¢/kWh}$ is the sum of the three components listed above (0.1888 + 0.1120 - 0.0589 = 0.2419). This rate is shown on Attachment C, line 16. These are the same rates included in the Company's filing. Staff Attachment E summarizes all PCA rate components and their associated expense amounts. It also shows amounts allocated to other jurisdictions and amounts shared with shareholders.

Attachment F shows the proposed average increase above base rates by class and Attachment G shows the proposed average increase above existing rates by class (last year's PCA rates to this year's PCA rates). In both of these attachments the percentage increase to larger customers is substantially more than the average percentage increase. When power supply costs increase rates, larger customers receive larger than average percentage increases. This results because large customers have lower rates than smaller customers and an equal cents per kWh increase makes a larger percentage difference to them than it does to smaller customers whose base rates are higher.

CONSUMER ISSUES

Idaho Power's PCA Application, filed on April 14, 2007, contained both the customer notice and press release. Staff reviewed them and determined that they complied with the notice requirements of IDAPA 31.21.02.102. The customer notice was mailed with Idaho Power's cyclical billings beginning with the April 26, 2007, statements and ending with the May 24, 2007, statements.

Customers were notified of the Application by bill stuffer and will have until May 14, 2007 to file comments. As of May 8, 2007, the Commission had received six comments. It is apparent from the comments that some customers still do not understand the difference between a PCA filing and a general rate case filing. Two customers who commented did not have an issue with the proposed increase although four customers were very unhappy with the possibility of another rate increase. One customer called the proposal to raise rates a "slap in the face."

Had there not been the decrease in rates during the past twelve months as a result of last year's PCA, the PCA request this year would have been an approximate 4% rate increase for residential customers. Because the roughly 10% rate reduction to residential bills from the 2006 PCA will no longer be in effect after May 31, 2007, residential customers will see a nearly 14% net rate increase when compared with last year's rates should this year's PCA be approved.

PCA RECOMMENDATIONS

Staff's review identified no adjustments to the Company's calculations. Staff recommends that the Commission approve the PCA rates as filed by the Company. Staff recommends that these PCA rates become effective June 1, 2007.

Respectfully submitted this 114h day of May 2007.
