Add to Mailing List: yes

Please describe your comment briefly:

I had just commented in favor of the energy efficiency ride case IPC-E-09-05. With that being said if the energy efficiency and DSM is actually making a difference, is there a need for this new generation? Much load shaping can happen with proper rate design. The last PUC's order on Idaho Power's rate case is a good example of this. In the future rate design will also be able to incorporate time of use metering. If new generation is actually needed, Idaho based fuel sources should be looked at first (geothermal, wind, solar). It is common knowledge that production of all mined and drilled fuel sources will decline in the coming decades and that in the long term renewable generation sources will be the only economical solutions. Thank you.

Please describe your comment briefly:

I have just learned of Idaho Power's plans to build a new 300 MW gas-fired generation plant in Payette County, and I would like to voice my opposition. We need to catch up with the rest of the country in adopting Renewable Portfolio Standards, and this plan takes us in the wrong direction.

Please adopt RPS for our state, so that we can start moving forward with renewable sources of energy, such as wind, solar and geothermal; yes, even nuclear. Many other states are far ahead of us, and we can learn from their examples, as well as avoid mis-steps they incurred.

Please say 'no,' to Idaho Power for any further additions of coal- or gas-fired generation capacity, continue your excellent work with encouraging Idaho Power to promote energy efficiency, and adopt RPS as soon as possible.

Stephen White
