Subject: Solar Panels

I've heard on the news and in the paper about the Idaho Power Commission Proposal to quit paying solar power generators earned credits. I have invested about \$ 2,000 in solar panels and equipment and I am planning on investing about \$18,000 more in the next 5 years. I am concerned that those people that are trying to help the electric power shortage are going to be penalized. I thought the whole idea for the energy credits and renewable energy was to help the cost of having to build more power plants. The more we can all help in investing in solar energy the better it is for everyone. Don't penalize the ones that are bold enough to invest their time and money to try to help us all. These solar panels do not beautify your house. Please don't take away what incentives and benefits from those who are trying to help all of us.

Thank you,

😊 Glenn Davis
