IDAHO PUBLIC
UTILITIES COMMISSION

IPC-E-12-27

Committee members,

At a time when the world is experiencing alarming carbon increases in our atmosphere, when CO2 levels have increased to 400 parts per million causing the earth's temperature to rise and CO2 parts to be beyond the long term sustainable level, it is unrealistic for Idaho Power to seek to discourage alternative power producing methods while increasing the cost of net metered customers.

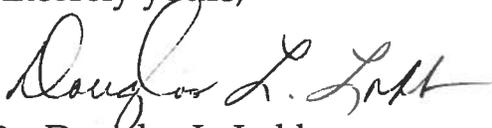

The appeal of Idaho runs contrary to the action needed in our world and appears to be a blatant attempt to attempt to increase profit at the expense of quality air and global warming concerns.

Rather than selfishly seeking more and more for less and less, this public utility should be paving the way for responsible action that is geared to long range correction of a growing problem rather than short term financial gain.

I join with other responsible citizens in requesting that this commission deny this unwarranted request by Idaho Power.

Thank you for your attention to this matter.

Sincerely yours,

Dr. Douglas L. Lobb
