Comment: I have to agree with what has been suggested to me by friends:  
"How about keeping your investment dollars close by by investing in renewable technologies here in Idaho?" I would add that, in general, we burn too much, full stop. Nevermind the greenhouse effect and the other terrible things that happen with coal mining/power generation. We generate heat in almost everything we do. Let's keep it to a minimum. Forget the coal idea. Let's do something new, something amazing!

Comment: Idaho Power is doing nothing to help in the face of inescapable evidence that the world's climate is being altered by burning coal. Now it must begin to act as a responsible world corporation, I believe. How?

Here is a summary of the GISS-NASA database for the last 40 years:  
Not at all ambiguous. Climate change is occurring. The most recent four decades, i.e. 1973-1982, 1983-1992, 1993-2002, and 2003-2012, have had the following temperature increments using the mean of the preceding decade as a reference:

1973-1982:	+0.19 degrees C
1982-1992	+0.21 degrees C
1993-2002	+0.22 degrees C
2003-2012	+0.22 degrees C

Total change since the 1973-2012 period: 0.84 degrees C, or 1.51 degrees Fahrenheit.

If the rate of change does not increase. and that is improbable, the global temperature would be 1.98 degrees C (or 3.6 degrees F) higher by the end of this century.

It is time for Idaho Power began to act as a responsible world citizen, rather than as a company interested only in providing its stock holders with what is surely only short term profits. There are poor island/nations who will be completely inundated as ocean levels rise, should we continue to burn coal.

It is my hope that the PUC will disallow IPCo's request to burn even more coal. Instead, please require them to expand their efforts to utilize the safer alternatives, and thereby respect and protect the rights of all world citizens who, inescapably, share our planet's singular atmosphere.

Acknowledge public record: True

Comment: If Idaho Power wishes to spend over \$100 million of our money, it should be toward modernizing our power supply not wasting money on old, polluting, dangerous supply. This money could be better spent switching to sustainable energy supplies (like consumer generated solar, wind, geothermal, etc.) or converting to natural gas generation. Idaho Power has both a financial obligation and an obligation to its customers' safety. Ignoring the obvious future of power generation violates the first obligation, and consciously choosing the most health hazardous option available violates the second.

Thank you for your consideration,  
Sean McGarry, MD

Comment: Idaho Power has asked the Idaho Public Utilities Commission (PUC) to approve their plan to charge ratepayers \$130 million to keep their coal plants in Wyoming clunking along for decades longer. This expenditure is just the tip of the iceberg as it will cost hundreds of millions of more dollars to keep these aging coal plants in compliance with pending regulations. Idaho Power should be investing in Idaho's renewable energy future and energy efficiency. Instead the company is wasting money on old technology and protecting its stockholders - and seeking PUC assurance that it can pass these costs onto ratepayers.

Please do not Let Idaho Power put rate payers on the hook for its risky investments in aging outdated coal fired power plants.

Comment: Idaho Power can draw from many renewable energy possibilities yet nearly half of the electricity Idahoans use comes from toxic coal-fired plants. Shockingly, Idaho Power plans to invest Idaho ratepayers' (your and my) money, \$130 million, on one of the nation's dirtiest coal plants, Jim Bridger located in Wyoming. This expenditure though does not address pollution control regulations that could cost ratepayers hundreds of millions of additional dollars.

This plan of Idaho Power for a coal-fired power plant is not only destructive to the climate and environment, but its' a huge financial risk to ratepayers, not Idaho Power. Burning coal for electricity is an antiquated technology that will become increasingly more expensive.

Idaho Power should follow the lead of other forward thinking utilities and begin pursuing clean alternatives. Rather than relying on toxic out-of-state coal fired power plants, wind, solar and energy efficiencies can meet Idaho's energy needs while creating high paying jobs in Idaho.

The Public Utilities Commission should put a stop to Idaho's addiction to coal. There will be a hearing in Boise on November 25th, 2013 concerning the plans to invest in the Wyoming coal-fired plant. Please come out to the hearing and ask the PUC to mandate Idaho Power to review all foreseeable costs before handing ratepayers the bill for \$130 million plus. Ruth Merrill

Comment: Dear Idaho Public Commission,  
Investing in coal is investing in the destruction of our little life raft floating on the infinite sea of space. This is the only planet we have and we all have to do what we can to keep this a livable place for future generations. Coal will eventually run out but excess carbon dioxide is forever.  
Please encourage Idaho Utility companies to invest in conservation and non polluting sustainable energy resources like; geothermal, Wind and Solar.

Comment: As a customer, I'm extremely unhappy to hear that Idaho Power wants to charge me, and everyone else that they serve, for upgrades to an outdated coal-burning power plant- particularly in light of the fact that there are changes coming. I firmly believe that in the next few years, the plant will probably be considered a dinosaur, and that regulations for carbon and other emissions will make it impossible to continue to use. I also feel that Idaho Power is not acting in the public's best interests, and is merely continuing to use these outdated methods to ensure their stockholders' bottom lines. I realize that it's highly unlikely that there will be any alternative electric services for those of us who live in this part of Idaho (such as a non-profit, public utility option), but if given the choice, I believe that most of us would happily "jump ship", just to avoid funding outdated, destructive, and toxic technologies such as coal-burning power plants from being used. We would prefer, if Idaho Power has to make upgrades to keep up with demand, that they make \*real\* and lasting upgrades, to alternative power generation through the use of wind, solar, and other clean energy sources. I would also like for them to be more accountable, in their ability to charge their customers for decisions like this- my family wants no part in the continuance of the use of coal.

Thank you for taking my comments, and helping to protect Idahoans, and people elsewhere who would be affected by this.

Sincerely,  
Heather Rodman

Comment: I would ask that the Idaho state government look beyond coal. It is dirty, environmentally damaging, and, in light of recent and better technology, it is greatly inefficient. On top of ALL of this, these companies aren't even located IN Idaho, costing Idahoans jobs, as well as taxpayer funds. These mines that Idaho is funding in Wyoming are out of date, also; another reason that these coal mining ventures are nothing more than ill-gotten gains, done to please shareholders and not to serve the Idaho public at large. I hope that the Idaho Government will consider the voice of its people, and move on to cleaner, more efficient ways of producing energy. Coal and Petrol and oil should be things of the past, not a dirty future to cling to. Please consider making Idaho a leader in alternative, cleaner, and more efficient energy productions and standards. Please say no to more coal. Thank you for your time and consideration, and please, please bring Idaho up in the nation as a happy home for renewable and sustainable energy sources.

Comment: I am asking that the PUC not allow Idaho Power to bill me and other customers for upgrades to the Wyoming coal plant that it is part owner in. I believe that coal is an 'old' technology (as is hydropower) that has too many things going against it. I do not want Idaho Power focusing on coal power in the future, and this request of theirs is only to upgrade the plant for existing environmental regulations. The science is in and these types of power creators cause too much pollution and contributes to climate change. We need to focus on more benign technologies like wind and solar. If you support this request, they will have to come back in the future and make another request for (expected) future environmental regulations. I do not support this, and think Idaho Power should be required to find other better sources. Denying their request would be a good first step to this end.

Thank you for considering these comments.

Comment: It is long past time for Idaho Power to move beyond Dirty Coal, and ratepayers should not be forced to pay / subsidize Idaho Power's risky investment in old, dirty technology.

Case number IPC-E-13-16

Dear IPUC

Idaho Power is asking you, the Idaho Public Utilities Commission (PUC) to approve their plan to charge ratepayers \$130 million to keep their coal plants in Wyoming clunking along for decades longer. This expenditure is just the tip of the iceberg as it will cost hundreds of millions of more dollars to keep these aging coal plants in compliance with pending regulations. Idaho Power should be investing in Idaho's renewable energy future and energy efficiency. Instead the company is wasting money on old technology and protecting its stockholders - and seeking PUC assurance that it can pass these costs onto ratepayers. .

Please do not to put ratepayers on the hook for Idaho Power's risky investments in aging coal plants.

Sincerely,  
David Hunt

Comment: ID

This is ridiculous to continue down this path. It both bad for the environment and our pocket books.

Renewable energy prices have been dropping and will continue so plus after 10 years the costs will drop to only maintenance costs.

Sincerely,  
Michael Haley

Comment: 1) We consumers CANNOT AFFORD the persistent annual increases by Idaho Power.  
2) Our environment - and humans - CANNOT SUSTAIN the filthy, unhealthy, unbreathable air inversions in Boise -- some lasting periods of WEEKS! Coal-fired plants result in filthy, TOXIC air!  
3) We MUST consider the damaging consequences to our children AND our environment.  
4) COAL is the WORST CHOICE!  
5) Because COAL KILLS PEOPLE - including CHILDREN!  
6) With so many HEALTHY NON-TOXIC options, why would any sensible, thinking person choose COAL?

Comment: I am in favor of the continued use of coal as a source of power generation. It is my opinion that until viable alternatives that are self supporting are found, power rates will be adversely affected. As long as Idaho Power is reasonable in their rate requests I support this case.

Thank you for your time.

Acknowledge public record: True

Comment: Idaho Power has asked the Idaho Public Utilities Commission (PUC) to approve their plan to charge ratepayers \$130 million to keep their coal plants in Wyoming clunking along for decades longer. This expenditure is just the tip of the iceberg as it will cost hundreds of millions of more dollars to keep these aging coal plants in compliance with pending regulations. Idaho Power should be investing in Idaho's renewable energy future and energy efficiency. Instead the company is wasting money on old technology and protecting its stockholders - and seeking PUC assurance that it can pass these costs onto ratepayers.

Comment: To continue to rely on coal-fired plants for power generation is not only backward thinking, it's effect on the environment is nothing short of criminal. Coal is the power of the 18th century, not the 21st. Exploring and investing in newer, greener energy sources is the only way that the human race (and by extension, the power companies) can survive.

Comment: It's time Idaho utilized its vast geothermal potential and STOP using coal. We have clean options in the form of wind and solar as well. We must move away from polluting our air. Now is the time for Idaho Power to be investing in Idaho's clean energy options and stop wasting money on old technology and protecting their stockholders.

Comment: I am against the expansion of electric generating capacity by using coal. It is critical to begin moving to sustainable energy technologies that do not harm the environment and contribute to global warming. As an interim energy source, natural gas is a reasonable substitute for coal. Please do not approve Idaho Power's request to expand coal generating capacity. They should be reducing it.

Comment: We are fortunate to be served by KEC and therefor are not directly impacted by a decision +in this case. However, we are concerned that too frequently, utilities are not put in the position of 'sharing' in the costs associated with continued use of dirty coal as a part of their power production.

We understand that some \$130 million is wrapped up in the current rate increase being requested by Idaho Power in this case, primarily to keep coal plants in Wyoming operating for decades longer. Based upon similar situations around the US, we're sure that it will cost millions more dollars in future years just to keep these aging coal plants in compliance with pending regulations.

We hope that the IPUC will consider the fact that it is too likely that Idaho Power is primarily acting to protect its stockholders and seeking IPUC assurance that it can pass any of these these costs directly to ratepayers, rather than putting forth an effort to invest in Idaho's renewable energy future and energy efficiency. Spending ratepayer funds on old technology is a waste of good money.

Thank you for your considerations during your deliberations on this matter.

Comment: I am very concerned about the increasingly terrible storms that our nation and the world are subject to, as the climate heats up. I believe that it is not only economically poor judgement to keep pouring money into out-dated coal technology, but that it is also extremely dangerous for the planet. We need to invest in renewable energies, not keep dumping money into dirty fossil fuels.

Comment: I have been an Idaho Power customer and property-owner aka taxpayer in Boise for over 30 years. It has been brought to my attention that Idaho Power wants to increase my rate to pay for keeping the Jim Bridger coal plant running. I am very much against raising my rate to keep an outdated, dangerous and expensive coal plant running. Idaho needs to look towards more efficient, environmentally safe and renewable sources to power our state's future. I am more than happy to pay more for a healthier, safer source of energy. Please deny their request. Thank you.
