Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power.

The decision is somewhat akin to buying a Model T Ford today despite the fact there are modern cars available at far more reasonable prices.

Solar, wind, and other renewables are improving almost daily. So why look backward when we should focus forward?

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. The amount Idaho Power wants to invest--\$130,000,000 should be spent on cleaner power. Spending it on an old coal-fired plant is just putting good money after bad. It is also just the tip of the iceberg. More money will be required to bring the plant up to date, to pay for the costs of coal-fired pollution and the costs of climate change. Burning coal is a major factor in climate change, as nearly all scientists in the world agree is fact.

Idaho power should be exploring ways to increase energy efficiency. It should be working with customers who use solar energy to put some of that energy back into the grid. It should work on locally sourced and used energy--a much cheaper and more efficient way to use energy. Please turn down Idaho Power!

Dear PUC Commissioners,

I am an Idaho Power customer and a person who loves Idaho and our natural resources. Coal should be phased out and eliminated. Idaho Power is forcing us into paying for dirty, wasteful, harmful, polluting technology. The air pollution from coal burning, the water pollution from the mercury, and the environmental destruction from coal mining do not deserve more investment.

Please DENY Idaho Power's attempts to continue investing in coal.

Dear PUC Commissioners,

I was an Idaho Power customer, and I don't want to invest in dirty coal power. I grew up in Idaho and got my B.A. from ISU. I am a frequent visitor to the state.

I am also a resident of the planet and I would like to live in a world that is not 2+degrees C. hotter. I wish to avoid more childhood asthma (from particulates) and the spread of the neurotoxin, mercury, from smoke.

I also strongly oppose mountain top removal in Appalachia.

Whether or not you think climate change is real (it is), you cannot deny the other negative outcomes of burning coal. Only the uneducated or the intentionally ignorant would agree to keep this outdated plant open.

Dear PUC Commissioners,

Frankly I cannot believe that in these days with global warming, pollution, and all the other vagaries related to coal that the PUC would even consider approving Idaho Powers' request for extension of the plant in WY. Look at China and all the problems they have with coal. It could happen here even in the wind swept lands of WY.

I am an Idaho Power customer, and I don't want to invest in dirty coal power. There are much better alternatives and ways to invest such a huge amount of money into the future rather than regressive coal.

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want IDP to invest any more money in the Jim Bridge coal plant. IDP would be throwing good money after bad. First, the plant is old; to bring it up to date will require \$130 million! This is a ridiculous waste of money that could be better spent. Second, the money would be spent on an energy producing technology that is dirty and even with an updated plant will continue to be dirty for decades. We need to invest in the future, in clean energy sources that will ensure the health of our area and the planet for eons. Lastly, investing this money in a plant located outside of Idaho is not good for Idaho. We need solid new clean energy jobs for Idahoans! Let's not support Wyoming jobs. Please, Commissioners, say no to the Jim Bridge plant investment.

Thanks, Elaine French

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. I would rather see investment in clean energy. If money goes Jim Bridger, then any investment in coal should have 2 components.

1. The investment should dramatically reduce air pollution and particulates.
2. The investment should be tied to equal financial commitments to clean energy.

While much of the country is successfully promoting wind and solar energy in a variety of ways, Idaho Power is actually fighting it. Unbelievable!

Idaho should show the way to the future rather than being an example for backwards thinking.

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. Please consider other alternative sources such as manure digesters, proven to work effectively & efficiently in many parts of the U.S. They also provide an important way to recycle a waste (manure) and keep it out of the surface & ground water. Solar, wind & geothermic power should also be readily available here in SW Idaho and explored as options.
