Dear PUC Commissioners,

I am an Idaho resident and I don't want our Idaho utilities investing in dirty coal. Please find ways to increase energy efficiency and invest in clean power. Please divest from the Jim Bridger power plant.

Susan Drumheller

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. I do not feel that this is a wise choice. Clean air is imperative. The brain is the first organ in the human body to die from lack of oxygen. Is foul air just slow suicide? Renewable energy is imperative. I have seen the dead forests of Poland and Canada due to air pollution(coal). I have seen how serious this is. Devastation on the grand scale.

How exciting an opportunity for Idaho Power to move forward. Do not be an anti social organization. Be responsible. Go renewable. Explore efficiency.

But on the other hand your desire to continue with coal only inspires me and many others to say no to Idaho Powers dirty power and go of your grid.

Leah Osborn

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. To put \$130,000,000 into a energy source we should be moving away from is not the right thing to do. It does not indicate that Idaho Power is interested in being on the leading edge of providing clean energy to the citizens of Idaho. Please spend that money moving to cleaner energy.

Respectfully,  
Daralene Finnell

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. It is time to look forward to cleaner technologies as we move ahead in the 21st Century. Investment in dangerous and dirty "old" coal technology is a throwback to a time when coal was the best we had, but science and the world has moved on. It's time Idaho Power moves on as well. As an Idaho Power customer, I encourage the company to look to the future and invest in clean power.

Sincerely, Margaret S. Adam

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power.

Burning coal is the largest source of carbon dioxide emissions, recently measured at 400 parts per million, considered by expert opinion to exceed manageable levels of global warming.

Effects of such warming, already being observed in Idaho, include significant changes in hydrology, the source of 84% of Idaho Powers renewable portfolio, i.e. the majority of Idaho Powers "Fuel Mix".

Perturbations in hydrology, whether flooding or drought, adversely impact Idaho Power's abilities to provide reliable power to its customers.

It is irrational for the PUC to approve a plan that invests in increasing the risk to their hydroelectric generating capabilities.

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. It is polluting our air and water and is a huge contributor to climate change. I believe that coal should be phased out and become an energy source of the past. We shouldn't be spending more money on an old power plant, we should be investing in Idaho's own clean energy source. We should be spending \$130,000,000 on the search for better, cleaner and more efficient energy. I believe the transportation of coal is as big of a toxic problem as burning it. Please protect our planet, say no to spending any money on coal burning. Thank you, Janet Carter

Comment: For Idaho Power to Invest over a hundred million dollars to upgrade their coal plants is indefensible from an environmental as well as an economic standpoint. As environmental standards shift in response to global warming, and as coal plants (such as the Jim Bridger plant that was built in the 70's) continue to degrade, more upgrades and retrofits will become necessary. To allow Idaho Power to begin this process without first reviewing the full scope of future costs that their coal powered plants will likely incur is irresponsible to say the least. If Idaho Power is able to go through with these initial upgrades, the burden of future costs will no doubt continue to fall on the shoulders of rate payers.

Like many large corporations, Idaho Power will clearly not change their ways for the benefit of the environment and future generations - they won't change their ways until they have to. Therefore it is up to public regulatory bodies such as the PUC to take a stand for the good of the people of Idaho and for the benefit of generations to come. In short, rate-payer dollars would be better spent on investments in renewable energy as opposed to keeping alive an archaic and dirty energy source such as coal power.

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. Spending \$130,000,000 on this old plant will only be the tip of the iceberg, as huge costs associated with mitigating the deleterious effects of this outdated technology will break the bank over the next few years.

It's time NOW to transition to clean energy instead of doing business as usual. I want cleaner power for my money and clean energy projects that will allow my grandchildren and all families in the future to drink clean water, breathe clean air and live healthier lives.

I urge you to be bold and shutter the Wyoming facility, and instead invest in long-term solutions that will protect our climate from carbon pollution.

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power.

The \$130,000,000 planned for propping up the Jim Bridger coal fired plant in Wyoming can be better spent in cleaner, more efficient energy projects. Continuing with coal could be seen as relatively "cheap", but burning coal has always been a huge polluter of air, groundwater, soils, and the people, your customers!, who live nearby and downstream.

Please choose cleaner power for for Idaho.

Comment: As a regulated monopoly providing an essential service, Idaho Power has an obligation to prioritize the societal impact as well as financial impacts on its rate-payers in it's decision making. With each new weather disaster that makes the news, our citizens our citizens are reaching a stronger consensus that our energy in the future must come from sources that minimize carbon pollution and climate change. This is a time and opportunity for Idaho Power to provide leadership toward the inevitable changes toward energy conservation and developing renewable energy options. To make a long- term investment in dangerous and outdated coal energy is short-sighted at best and immoral at worst. This company has great power to affect our future and should have no option but to choose the path that clearly points to a liveable planet for generations to come.

Thank you,  
Nancy Basinger

Comment: I am writing concerning the request by Idaho Power Co. to increase utility rates to pay for upgrades to the coal fired plants in compliance with federal regulations. I do not support contributing to the further use of coal which is an extreme environmental polluter to the land, water and atmosphere, contributing to greenhouse gases. The direct costs of 129 million include 20 million in interest and 66 million as profits to shareholders. This is completely unacceptable! Profit before responsibility to the environment which keeps us alive is the root of all our problems. I would be comfortable having my rates increase if IPCo was planning to assist in programs to install photovoltaics and solar thermal on residential and commercial rooftops. It seems the company should move into the future and tap into the energy and monetary potential of distributed energy. Then the company would be a true source of power.

Sincerely,  
Kerrin McCall

Comment: I am outraged that Idaho Power continues to ignore the global consequences of relying on coal to produce energy for Idaho. You know it is dirty and dangerous for health and environmental reasons and to waste \$130 million of ratepayer dollars on technology to upgrade coal-fired power plants to meet today's environmental standards is shoving your head in the sand. These current standards will soon make any upgrades made today obsolete and then you will be asking ratepayers to foot yet another series of upgrades.....and it will go on and on.

If you asked Idaho Power customers whether they want to keep paying through the nose for temporary fixes to the energy problem, I'm sure they would say NO. And you tell us that Idahoans want the cheapest power possible....where did this response come from? Did you send out a survey asking this question? If so, when, and why didn't I have a chance to respond?

The coal-fired power plant in Wyoming that you are requesting to use our money to upgrade is currently one of the West's leading greenhouse gas emitters and contributors to climate change. Is this not a MESSAGE to you to stop this insanity and change to more efficient, clean and safe energy sources....like solar and wind and biofuels? It seems a risky business to gamble with ratepayer money on upgrading these dirty and dangerous plants just so in a few years, you can ask us to do it again.

Nationally, utilities are dumping coal-fired power plants from their dance cards as too dirty, dangerous, polluting and expensive. Their dance cards are filling up with clean and efficient renewable energy sources that everyone can be proud of.

Please, I ask Idaho Power to stop its outdated and frankly Neanderthal behavior and get with the times. Coal must be replaced with cleaner and more efficient and safer forms of energy production.

Thank for the opportunity to comment...  
Margaret Stewart

Comment Submissions  
Idaho Public Utility Commission  
Re: Idaho Power Coal Investment

November 21, 2013

Commissioners:

Please deny the current request from Idaho Power for further investment in coal plants, at ratepayer expense. As a ratepayer, I object to this irresponsible action by Idaho power. The health of our people and our planet require conversion to renewable electric power from wind, solar, and/or geothermal.

Please also read and digest a current study on wind power costs, at:

<http://ecowatch.com/2013/10/30/research-wind-energy-decreases-emissions-electricity-costs/>

Go on, read this! It clearly shows massive savings in electricity costs by using wind power.

By the way, I also object to the misleading advertising in our state about the 'swindle' of wind power, and I hope these advertisements are not being done at ratepayer expense as well.

Thank you for your attention to these matters.

Dennis Donnelly

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. The science is clear that any use of coal will add to global warming and degrade the quality of life we value in the Intermountain West.

I was formerly a green power program subscriber with Idaho Power and participated in their voluntary program for over ten years (donating \$10 per month to purchase green energy). Just this year I cancelled my participation because of Idaho Power's stance on wind and solar energy. Idaho Power's request to further invest in coal power is only reinforcing my decision.

We must increase energy efficiency and invest in clean, environmentally friendly power generation. I want my energy dollars going to clean power, not coal. I urge you to deny this application.

Dear PUC Commissioners,

I am an Idaho Power customer, and I don't want to invest in dirty coal power. I want my power company to be actively working toward finding ways to make renewable energy a bigger part of its equation, and at the same time working hard to phase out the dirtiest of all energy sources, coal. As an Idaho high school chemistry, geology and physics teacher with a PhD in Geology, I know exactly how polluting coal burning is, and I feel very strongly that it is time to make a break with the past by saying no to coal now.
