Ketchum Idaho, 83340

Name of Utility Company: Idaho Power
Acknowledge public record: True

Comment: I am Margaret Macdonald Stewart and I strongly support the Idaho PUC to accept both solar project contracts, #IPC-E-14-19 and #IPC-E-14-20.

The world is changing, solar is essentially a free source of energy with no dangerous waste produced and coal energy will always be dirty and dangerous to the environment and our health.

The cost of keeping coal plants in compliance with ever stricter environmental and health standards and safeguards along with the continual declining cost of solar energy make acceptance of both of these solar project contracts a no-brainer.

By accepting these solar contracts, Idaho will benefit from increased tax revenue, thereby increasing the economy; Idaho Power will benefit by showing its customers that it is really paying attention to its own 2012 Idaho Energy Plan adopted by the ID legislature envisioning such renewable energy projects and the environment will be a big winner, keeping dirty coal emissions out of the air we breathe. And the ratepayers will benefit from not pouring additional precious money down the black hole of maintaining dirty coal-fired energy plants.

With this win-win-win option before us, it seems only sensible that the PUC accept these solar contracts. The future is here and solar and wind are the headlines of the day.

Sincerely,
Margaret Stewart

Comment: The wind and sun are two of Idaho's most abundant resources. Please let us take advantage of these clean, renewable resources and approve as many solar and wind projects for generating electricity as possible. Whatever the downsides, they will not be nearly as great as relying on coal or nuclear-generated energy. For the sake of all Idaho citizens and future generations, please support the use of wind and sun for energy.

Comment: I support the Grandview project and believe that Idaho Power should negotiate a fair deal with the developer so that Idaho's electrical supply trends away from fossil fuel-generated power towards more sustainable sources.

Comment: Dear PUC Commissioners,

I am a strong proponent of solar power in Idaho. There is strong economical evidence that solar power will provide an excellent long-term source of electricity to meet Idaho's energy needs.

The addition of this new solar plant along with additional efficiency savings will go a long way towards energy independence for Idaho.

Thank you for your consideration!

Harold Orien

Comment: I support the Grand IEA Solar Project. This clean energy project will support the state's economy and contribute to our tax base by providing new jobs and income to Idaho. This is a great way for Idaho Power to improve their infrastructure and meet the needs of growing communities in Idaho.
