Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

I wholeheartedly encourage you to approve this project.

Sincerely,

Mandy Latchu

Comment: Dear Sirs and Ma'am:

I wish to express my support as an Idahoan and an Idaho Power customer for these projects, the state's first projects of this scale. These projects will provide jobs during construction and ongoing (for maintaining), and will be a boon for rate-payers such as our family as adding solar to the mix of sources is a very smart move for Idaho Power and for Idaho's power needs going further into this century. This adds further stability as nonrenewable sources become more depleted over time.

I hope you will give your assent to these projects. Thank you.

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

Idahoans have benefitted from renewable power for decades. Today we are fortunate that wind and solar power are developing. I would love to see solar panels on every roof. That doesn't mean that I would object to a commercial venture like Idaho Power's proposal for the Energy Sales Agreements with Grand View Solar and Boise City. I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

I wholeheartedly encourage you to approve this project.

Sincerely,
Judy Ferro

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

I wholeheartedly encourage you to approve this project. Our future lies in renewable clean energy, solar and wind. Idaho Power has to give up coal as an energy supplier. It is dirty and it ruins the earth in the mining of this product. Also nuclear is also NOT an option as there is NO way to safely store the used products for future generations.

Sincerely,

Claire Casey

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are good for ratepayers, good for the economy, good for Idaho Power, and good for our environment, for us and for our future generations.

I'm sure you know that not only does Idaho have some of the best solar resources in the United States, this solar energy is poised, as electronics were, to get better and cheaper. Coal, on the other hand, will only get scarcer and more expensive. I am very happy to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This is an opportunity for Idaho Power and Grand View and other Boise City providers to learn and to improve future solar projects.

Financially, these projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000 a year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, according to a Solar Foundation 2014 report. Idaho can share in that growth.

Idaho Power also needs to succeed in this era of solar, wind, hydro and energy conservation. Coal prices will only rise due to government regulations internalizing costs that were

formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

Finally, and to my way of thinking as a mother, a grandmother and a great-grandmother, they are good for our environment. According to the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho residents and residents of nearby states. Finally and most importantly, you have an opportunity here to help prevent the ruin exacerbated by an estimated 150,000 tons of carbon dioxide per year. For approving this project, I and my descendants will enthusiastically thank you!

Heywood Williams, lover of the Earth, artist, retired teacher, daughter, sister, aunt, niece, cousin, mother, grandmother, great grandmother, and native Idahoan.

Comment: My comments are brief and to the point .
We have one planet, and it offers us many free power sources, if only we as humans focused on what is best for all people and not focus on making money as our top priority.

Sun, wind, water work well, and fossil fuels are destroying our planet.

What do we do when the water , air isn't usable anymore ?

Can we please, sit down and use alternative energy sources more and become a trend setter, instead following our ancient past history ?

Thank you for listening.

Linda Reed

This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

I wholeheartedly encourage you to approve this project.

Sincerely,

William D Woodward

Comment: I fully support Idaho Power's submission for Energy Sales Agreements with Grand View Solar and Boise City. Climate change due to global warming is real, definitely human caused and the effects are present or imminent globally and locally. This could be a great opportunity for economic growth if regulators like yourselves help create a business climate favorable to it.

Sincerely,

Matt Laurance

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. Acknowledge public record: True

Comment: As a residential rate payer concerned over the effects of continuing to heavily rely on coal burning and upon reading of ID Power's planned acknowledgement to the PUC for the agreement with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

1. Additional energy source options for concerned ratepayers
2. Growing good jobs for the economy
3. Good for our environment, less mercury in our famous Idaho fisheries, birds and wildlife and for improving the health of future generations.
4. Good investment for both ID Power and myself as a small investor saving for my future And several other points outlines below:

They are good for our environment. Per the IPCC, CO2 emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. The solar option is good for ratepayers. ID is abundant with solar resources amongst this US region, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive.

It is good to see ID Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both ID Power and the Grand View and Boise City providers to learn and to improve future solar projects.

Jobs, jobs, jobs right, are good for the economy? These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

As a small investor these solar investments will pay off and are good for Idaho Power and my portfolio. Coal is dirty, polluting, poisonous and is recognized on Wall street as being a loosing investment for the coming decades. ID Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations.

Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

Thanks for taking my comments.

Honorable Paul Kjellander
Honorable Marsha Smith
Honorable Mack Redford

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

I will start with the most important of the bullets listed above. The existential threat of climate change is too real to ignore. Just because the direct effects of burning fossil fuels are invisible to the human eye, the real consequences of such actions are real and visible. The sad thing is that scientists have been telling us this for over two decades, longer than I have been alive. Coping with the new normal of extreme weather and potential planetary uninhabitability, along with the continued oppression of poor peoples in order to continue such a dirty extractive process means a whole new world for young people - and we need the change that immediately. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource

mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power wants to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that. The earlier we start acting to prevent a catastrophic future, the less the need will be for dramatic actions and regulations in the future.

I wholeheartedly encourage you to approve this project.

Sincerely,

Stanford B McConnehey

Comment: Solar power, either on an individual basis or a utility scale project, is not only good for Idaho, but beneficial to the environment. Hydro generated power will be around for a long time. However, as we have seen with the Wanapum Dam problem on the Columbia, Mother Nature always find a way to dismantle what man has created. Alternative energy methods are a necessary alternative to the ways of the past and it is time we embrace fully these new technologies.

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

I wholeheartedly encourage you to approve this project.

Sincerely,

Carolyn Wolter

Comment: Dear Commissioners:

After review of Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to convey my support for these solar energy projects. Solar energy, like all energy sources, is not perfect but with recent significant improvements in efficiency and when the true costs of carbon based energy is factored in it becomes clear that solar should and will be part of the solution to clean and economical energy for Idaho. I strongly believe that coal, the dirtiest and most harmful to our environment, should be phased out of our resource mix, and that ultimately the real costs of coal will make that clear. We have abundant sunshine in Idaho for these projects. They will benefit the local economy both in the short and long term, they will benefit both ratepayers and Idaho Power in dealing with our energy needs, and they our good for the environment which Idahoans so appreciate and why we ultimately live here. Thank you for taking the time to read and consider my input on this important issue.

Comment: Today is a new age, we need to consider our current abilities to manage our resources. It really comes down to the point that the earth has been through too much, our climate is changing, and so must we. Solar power, wind power, items that use the powers of nature can help not hinder our success. Honestly it is not the idea of taking peoples jobs, it is the idea of creating better ones that also support clean and healthier living. Please look at what can be done, please look at what has already been done. The definition of insanity is doing an action over and over again expecting different results....let's not fall into this.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

I wholeheartedly encourage you to approve this project.

Sincerely,

Russ Berger

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19
and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

I was pleased with Idaho Power's recent submission to the PUC for the solar projects in Boise and Grand View. These projects will be a win-win situation all around. Ratepayers, Idaho Power, local economies, and the environment will all benefit. Other utility companies around the country have shown that solar and wind power projects can help the bottom line for the companies, and the ratepayers.

Ratepayers will benefit because of the fixed costs of solar. The sun will never cost anything, while the cost of other fuels will continue their rise, as they have for decades. Idaho is blessed with abundant sunshine, and the money will remain here in Idaho, rather than being sent out of state where our coal plants are located.

Idaho Power will benefit, as they can learn how to profit in an era of change where coal plants are going to disappear and be replaced by non-CO2 emitting energy sources. The future of coal plants is obvious, and as the consequences of climate change become ever larger, the urgency and demand for change will become greater. Idaho Power, and their rate-payers, must be sure to not end up with plants they have invested large sums in that will be stranded.

Local economies will also greatly benefit by the jobs they create and the tax base they will create. During construction, these projects will provide an estimated 450 construction jobs, with jobs for maintenance professionals continuing, as well as jobs in businesses that support these projects. Payments to landowners in Elmore County will continue for up to 35 years, and Elmore County will add over \$400,000/year to tax receipts.

These projects will also benefit our environment. Our air will be cleaner, there will be fewer emissions of mercury, lead, arsenic, and other heavy metals, which will improve

people's health, and make our beautiful Idaho vistas even clearer. Additionally, it will remove about 150,000 tons of CO2 per year, an important step in cutting the production of heat-trapping gases.

I wholeheartedly encourage you to approve this project.

Sincerely,

Mitch Long

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my enthusiastic support for these forward-looking projects!

These projects are:

- Good for Idaho
- Good for customers
- Good for our economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

Idaho is blessed with some of the best solar resources in the United States, and many of us see solar energy getting better and cheaper with time. Coal and oil will only get scarcer and more expensive.

I am so excited to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix! This is a great opportunity for Idaho Power, Grand View providers, and Boise City providers to learn and to improve future solar projects.

Idaho can and should take advantage of and benefit from the growth that can come with solar power projects. These projects will provide an estimated 450 construction jobs, then maintenance professionals, and probably even a few non-power but related jobs. Then we'll get

additional local jobs and business opportunities. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report.

These projects would be good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

Solar power projects are good for our environment. The sooner we stop burning coal, the better! Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. Let's reduce the need for coal and the amounts of mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. EVERYONE should be able to support this!

Idaho has something of a reputation for not being a forward-thinking, progressive place. These projects would be the first and largest solar utility-scale projects to be built in Idaho and would go a long way toward changing that viewpoint.

PLEASE! Approve this project!

Sincerely,

Elizabeth A. Bearden

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. This will be an opportunity for both Idaho Power and the Grand View and Boise City providers to learn and to improve future solar projects.

They are good for the economy. These projects will provide an estimated 450 construction jobs for 12 months, after which they will employ maintenance professionals. This will create additional local jobs and business opportunities in Idaho to support solar workers. Landowners in Elmore County will receive up to 35 years of payments, and Elmore County will add over \$400,000/year to tax receipts. The U.S. solar industry employment grew 53 percent from 2010 to 2013, per a Solar Foundation 2014 report. Idaho can and should share in that growth!

They are good for Idaho Power. Idaho Power must find a way to profit in the era of solar, wind, hydro and energy conservation + demand reduction to meet its power obligations. Coal prices will only rise due to government regulations internalizing costs that were formerly externalized (i.e., cleanup), leaving Idaho Power with stranded costs. This is an opportunity to learn how to do that.

They are good for our environment. Per the International Panel on Climate Change (IPCC), carbon dioxide emitted now will continue to disrupt the earth's climate for hundreds of years after we are gone. The sooner we stop burning coal, the better. These are the first and largest solar utility-scale projects to be built in Idaho! The 120 MW generated will power an estimated 30,000 homes and reduce the need for coal burning. It will also reduce the mercury, hydrocarbons, arsenic, lead and other toxic heavy metals generated in the process of burning coals, improving the health of Idaho, Nevada and Wyoming residents. From a Climate Change perspective, this will remove an estimated 150,000 tons of carbon dioxide per year. For this, we and future Idahoans thank you!

I wholeheartedly encourage you to approve this project.

Sincerely,

Gene Marcowka

Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20

Dear Commissioners:

After reviewing Idaho Power's submissions to the PUC for the Energy Sales Agreements with Grand View Solar and Boise City, I would like to register my support for these projects.

I support these projects wholeheartedly because they are:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

They are good for ratepayers. Idaho is blessed with some of the best solar resources in the United States, and solar energy is poised, as electronics did, to get better and cheaper. Contrast this with coal, which will only get scarcer and more expensive. I am thrilled to see Idaho Power incorporating Idaho-generated solar utility-scale power into their resource mix. Re: Idaho Power -- Energy Sales Agreement with Grand View Solar and Boise City, IPC-E-14-19 and IPC-E-14-20 Dear Commissioners, I am writing to voice my complete support for the agreement between Grand View Solar and Boise City for these following reasons:

- Good for ratepayers
- Good for the economy
- Good for Idaho Power
- Good for our environment (for us and future generations)

I donate money each month for Green Power. We can't wait any longer to put our money in alternatives.

Sincerely,
Ruth Merrill

Comment: We have so many sunny days, it seems ungrateful not to take advantage of them. We don't know the future of petroleum, but it seems unlikely that the sun will dim. I think we should be ready for when oil supplies wane.
