Hailey Idaho, 83333

Name of Utility Company: IDAHO POWER

Comment: Every two years utility companies file a plan with state regulators to show how they will meet future energy needs for the next 20 years. In its latest resource plan, Idaho Power proposes shutting down their two North Valmy coal plants in 2025. Kudos to Idaho Power for looking towards early coal retirement. The problem is their proposal is just taking the easy way out.

Idaho Power's own analysis shows that it would save customers \$75 million if they shut down unit 1 in 2019 rather than 2025, as well as reduce our CO2 emissions. Idaho Power says that it's just too hard to get everything worked out for a 2019 unit 1 shutdown. Please make Idaho Power work harder to reduce its emissions. They always seem to put things so far into the future that it does no good for present day pollution.

Public Utilities Commissioners, I think saving customers \$75 million is worth asking Idaho Power to work hard! Please have Idaho Power to implement a 2019 shutdown of the North Valmy unit 1 coal plant or else come back and tell us why its too hard to do what is best for their customers and our climate.

Comment: Hi Commissioners,

I think to save customers \$75 million Idaho Power should work harder to implement a 2019 shutdown of the North Valmy unit 1 coal plant. If they don't they need to come back and tell their customers why it was too hard to do the best thing for their customers and our climate.

Regards, Matt Clark

Comment: Idaho Power's own analysis shows that it would save customers \$75 million if they shut down unit 1 in 2019 rather than 2025, as well as reduce our CO2 emissions. Idaho Power says that it's just too hard to get everything worked out for a 2019 unit 1 shutdown. We say try harder.

With regard to Idaho Power's 2015 Integrated Resource Plan:

I understand that Idaho Power proposes to shut down their two North Valmy coal plants in 2025.

Shutting down coal plants is good.

However, Idaho Power's own analysis shows that it would save customers \$75 million if they shut down unit 1 in 2019 rather than 2025, as well as reduce our CO2 emissions.

I hereby request that the Public Utilities Commission direct Idaho Power to implement a 2019 shutdown of the North Valmy unit 1 coal plant or else come back and explain in detail why they cannot do what is best for their customers and our climate.

Thank you for the opportunity to comment.

Comment: It is my understanding that Idaho Power can save customers around \$75 Million by closing their North Valmy coal fired power plant in 2019 but it is somehow inconvenient to save customers money and save the environment of tons of CO2. Please require Idaho Power to make plans to close North Valmy in 2019.

Thank you for accepting this comment

Comment: Idaho Power should submit their plan for the closure of the power plant for assistance from EPA or other authority in order to have it amended so as to reach the 2019 deadline. The continuation of the damaging use of the power plant is unconscionable. The additional 6 years will add greatly to the already prolonged process. The assistance and the 2019 deadline must be added to the IDP requirements as mandatory.

Comment: It is a fact that coal fired power plants are a major contributor to climate change via global warming. Nothing will effect our economy or our environment more than man-made global warming. Idaho Power could save consumers 75 million dollars by shuttering their plant in 2019. Instead they aim for 2025, while pouring cold water on clean energy suppliers.

This really needs to change. Please require Idaho Power to close at least one of their plants in 2019.

Respectfully,  
Matt Laurance

Comment: It is my belief that the most dominate fear that future generations will face is global warming. In Idaho, which is a agricultural state, and dependent on adequate water for crops, we need to give our very best effort to effect weather patterns that are beneficial. Our lakes need to be replenished by snow melt which is within 10% of the norm, or better. This means that the shutdown of North Valmy in 2019 is critical in the fight to impact global warming.

I support the closing of all coal fire power plants by 2019. This country was built by the concepts of hard work and giving your best effort. The PUC should mandate that the 2019 date be embraced by coal fire plant managers. The power industry certainly has data to support what forms of power production are most innovative and cost effective.

Comment: I wish to comment on Idaho Power's 2015 Integrated Resource Plan.

Idaho Power proposes shutting down their two North Valmy coal plants in 2025.

Idaho Power's own analysis shows that it would save customers \$75 million if they shut down unit 1 in 2019 rather than 2025.

While it might be difficult to shut down unit 1 in 2019 the \$75 million savings are well worth the effort.

Name of Utility Company: Idaho Power  
Comment: Hello,

I am writing about the Integrated Resource Plan. I believe Idaho Power and every other energy company needs to start shutting down their coal plants. This is a dirty industry. Our health (lungs) is important. There are more, better energy choices every day. I hate to see the legacy coal plants costing so much money to maintain & upgrade. And we/they should not enter any new agreements that will cost millions or billions of dollars for the foreseeable future. Let's move forward. There is so much potential in the new energy sources, some that may not even require transmission lines. I hope we, the rate payer, and they, the power company, will have the flexibility to adapt to the new energy sources.

Thank you for listening (reading).
