Comment: I would respectfully ask that NO changes be made to the net metering structure at this time. Beside the obvious benefit of solar energy, users contribute greatly by not requiring more infrastructure. thank you

Comment: I recently installed a solar power system at my residence. I ask that the PUC not approve these discriminatory changes, which the utility is proposing before having an analysis of the costs and benefits of the solar energy that customers put back on the grid.

I feel that their proposal of creating a separate rate schedule now will open up the opportunity for unbridled adjustments in the future as they see fit as it wouldn't be regulated by the residential schedules.

Comment: Idaho Power's request to create a separate billing class for net metering customers is both unnecessary and indicative of an inevitable and possibly unfair rate hike for those people. This move gives Idaho Power too much leeway to increase consumer pricing before the actual cost to Idaho Power has been proven. This petition should not be fast tracked as Idaho Power has requested. For fair and equitable outcomes for all, more study and time is needed in order to make an accurate determination.

Comment: As a single working mom using solar, this request has created a looming uncertainty in what is to come, and that this gives Idaho Power too much leeway to increase consumer pricing before the actual cost to Idaho Power has been proven. I believe in green renewable energy. I also believe that you will see the opportunity to charge a price that I could not afford as a school teacher and single parent.

Comment: I'll keep it short, I feel that creating a separate schedule for those who have solar panels is discriminating, with no justification other than placing a extra cost burden of cost on those who have solar panels. That would be a negative impact to the future of solar power here also.

Comment: I am against making a separate rate class for " data collecting". This is not required. Net metering is the way of the future. We need companies to embrace change not propose rules to stifle change. For the good of the public, please do not approve these proposed changes.

Thank you

Comment: I don't believe it should be necessary to create a separate class to collect data that can/and will have negative impacts on net metering customers. I have just recently become a 'net metering' customer, and this proposal makes me nervous! Therefore, I am requesting that PUC not approve these discriminating changes before having an analysis of costs/benefits of the solar energy put back in the grid by customers. The solar energy use should be regulated by the residential schedule.

Thank you!
Alvena Kinkade

Comment: I spent \$20,000.00 last year on solar for my house, NOW Idaho Power is going to change rates to us that are trying to use green energy, at least prior installations should be grandfathered in.

Comment: I would like to comment on Idaho Power's application to change their net metering fees. I have not seen any proof from Idaho Power that by having me hooked up to the power system I am taking something away from my neighbors. In fact I could be saving everyone some money by using less power and thereby keeping power costs down. I consider the solar panels that I installed similar to every other energy saving device that I have installed and that Idaho Power encourages. Tiered rates such as those for our water bills would be great and would even further encourage people to cut down on their energy usage. Please look forward to the future of our state and think about our children. They deserve a legacy with cleaner power.

Sincerely, Kathy Walker

Comment: Please do not create a separate rate class for net meter customers as it is not necessary to collect data about our power use. Instead, this "class" will likely be used to apply punitive costs and prevent others from moving to alternative energy. It is a business move to push small, alternative energy companies out of the market. This is bad for Idaho's businesses, jobs, and economy.

Comment: I was unable to determine how to make my comments on this case on line.

Basically, my comments are:

I want to keep solar and wind power affordable in Idaho.

I do not think Idaho Power should stop Net Metering.

I want Idaho Power to completely divest from coal as a fuel.

Comment: My comments are about Case # IPC-E-17-13, I am astonished that this is even being brought up.

My wife and I chose Boise, Idaho for our home, because it was considered a innovative and green state.

The case being presented clearly sends the message, that it isn't that state. Yes being a prudent person we are concerned about our natural resources, and what we pass on to the next generation.

Utility companies in other states are concerned about the over use of how we light, and heat our homes, so now we have alternatives, Solar and Wind. The fact is that the utilities in Arizona, California, Nevada, Texas, Minnesota, Florida , have been and continue to build facilities to harness what mother nature gives us for free.

At this point in the State of Idaho, the private citizen's are the ones that are footing the costs to use alternative means (Solar) for energy.

The infrastructure that Idaho Power depends on Hydroelectric, how long before some of those dam's will need to be removed, so the Salmon can return to their spawning grounds?

Like some other state's Idaho is in a position to become one of the leaders in the use of alternative energy.

Please do not let Idaho Power have their way on the backs of the rate payers.
