Comment: We oppose the above Idaho Power request because this request has created a looming uncertainty in what is to come, and that this gives Idaho Power too much leeway to increase consumer pricing before the actual cost to Idaho Power has been proven. We choose solar power and incurred the cost of installing it to help the environment and do not feel we should now be penalized for doing so.

Comment: The comments that I am submitting are about the case above.

I am requesting that Idaho Power not be approved on the mentioned case. My reasons are; if Idaho Power is losing money, have they looked at their own operations, and made the cost cutting move's that we as rate payers expect? Have the topic that some of their Hydroelectric facilities, are costing more in maintenance, then are making in electrical production. Before there is any type of consideration such as they are proposing, shouldn't their current operation be performing at optimal capacity?

Alternative sources of power are the future of this country, when is the PUC going to demand that the utilities they oversee, do their part to reduce Global Warming?

I feel that the future generations, should have the opportunity to enjoy our Earth, and Solar Power is a positive step in that direction.

Comment: We ask that the PUC not approve these discriminatory changes, which the utility is proposing before having an analysis of the costs and benefits of the solar energy that customers put back on the grid.

We feel that their proposal of creating a separate rate schedule now will open up the opportunity for unbridled adjustments in the future as they see fit as it wouldn't be regulated by the residential schedules.

We add electricity to the grid during high demand hours. We only take back from the grid at low demand hours. Our solar units produce clean electricity at our own expense and upkeep.

Comment: I am opposed to Idaho Power creating a separate rate for rate payers who have alternate power systems. I have a solar system on the roof of my home that was installed last year and the system has been producing more power than I have been using for the bulk of the year. Idaho Powerdoes bill me monthly to advise me what I have used versus what I have produced.

Comment: I am asking the commission to protect the growing renewable industry in Idaho and the freedom of Idaho customers to provide some of their own electricity. The values of our state strongly support individual freedom and fair competition. Our electric utilities should receive fair compensation from all customers for the use and maintenance of the electric grid. And customers who produce some of their own power should be encouraged to do so. The move to clean, locally produced energy in Idaho will strengthen our economy in many ways. We should embrace new technology that allows us more freedom from imported fossil fuels and replaces those with new job opportunities for Idahoans.

Thank you

Comment: Hello,

As a new solar roof owner and net meter customer as of August 2017, I'm very nervous about Idaho Power designating a new customer class.

Creating a new customer class without defining the rules will reduce the adoption of solar in Idaho, and it will slow the pace of change that people like me all across Idaho have started by installing solar and supporting clean, renewable energy.

Cameron
