Name of Utility Company: Idaho Power

Comment: Idahoans should have the right to off-set their own electricity usage with on-site renewable energy. Idaho Power has not conducted a cost-benefit analysis, needed before any changes in metering policy are considered or implemented.

Idaho Power is targeting small customers who choose to self generate electricity, punishing them for reducing energy use and rewarding higher energy use customers. The proposal effectively seeks to eliminate consumer choice, energy independence and a consumer's ability to do what they wish on their rooftops.

If Idaho Power is proposing to treat solar customers differently, why not create a separate rate class for urban vs. rural customers, or customers who have A/C vs. those that don't?

Comment: Investing in rooftop solar to control energy bills while supporting Idahos clean energy sector is important to me. Please maintain the net metering program as a simple and fair means to enable Idahoans to meet their own energy needs.

The PUC staff looked at the details and found no evidence to support Idaho Powers request to segregate solar customers. I agree.

Because I cant choose my utility, I rely on the PUC to ensure fair programs. Again, please maintain the current net metering program.

Comment: Idaho should be growing clean energy options to reduce our reliance on out-of-state fossil fuels. The net metering program is the only means for individual Idahoans to invest money in their own locally generated clean energy.

The Idaho PUC staff looked at Idaho Powers documents and found no reason to segregate solar customers. Instead, I ask the PUC to direct Idaho Power to consider the full range of costs and benefits that arise when customers avoid utility power and meet their own needs with local clean energy.

Because I cant choose my utility, I rely on the PUC to ensure fair programs. Please maintain the current net metering program.

Comment: Idaho Powers net metering program enables local citizens to support Idahos clean energy sector. Supporting this growing sector of our economic reduces the current reliance on out-of-state fossil fuels for roughly 50% of our electricity.

Investing in local solar power keeps more energy dollars in our communities and allows individuals to meet their own energy needs. Individual control and local economic growth are Idahoan values.

Please stand up for these values by maintaining the current net metering program.

Name of Utility Company: Duke Energy

Comment: We are experiencing the same situation here in SC as you are in Idaho. Duke Energy, the #1 electric utility in the US supplies my electricity. I have an analog meter which Duke retrofitted with a radio transmitting device. It works fine, but Duke says it has to be replaced. Either get a cancer causing, harmful smart meter, or do an opt-out contract and pay \$150 for initial set-up and \$11.75 month to have a disabled smart meter installed. Is this not extortion? I have no Constitutional rights! Our Public Service Commission will not help protect the consumer. We have complained to them and it goes on deaf ears..Duke Energy actually told my neighbor and quote "we do not care about your health". What are we to do when we have only one electric supplier? If we don't agree with them they will cut our power off!! I hope you Commissioners will help your state consumers. A lot of powerful lobbying takes place and you know how that plays out; the consumer generally gets to sit in the back of the bus.

Therefore I am requesting the Commission to read independent private scientific studies about the harmful effects of smart meters and do not let these large electric utilities run rough-shod over the poor consumers by forcing opt-out fees, or forcing them to have a smart meter installed.

SMART METERS ARE HARMFUL AND DANGEROUS !!!

Thank you for considering my comments.

Name of Utility Company: Idaho Power

Comment: Renewable energy is an important part of our future and I disagree with shifting cost to those who generate power on their own.

Solar energy is a job creator, is environmentally friendly and gives us some level of energy independence.

I request more discussion and study before Idaho power enacts the planned cost shifting to those who generate their own electricity.

Name of Utility Company: Self
Comment: Idaho Public Utilities Commission

My names Dakota Perez and I lived in Idaho for over 10 years between 2005-2015 and all my distant elderly relatives still reside in Emmett, Caldwell, and Boise. I would like to express my dissapointment in the proposition to require citizens who use Solar Panels as a clean source of energy; to be bracketed and forced to pay Idaho Power for the energy they acquire from private Solar Panel use. Not only does this seem unconstitutional, but it excentuates Idahos continuing resistance to truly care about all of America, all of the world, and even it's own Idahoans. If approved this small step combined with your recent decision to alter scientific fact in your schools will tell all of America that you simply do not have any morality or environmental consciousness residing in the impending future of your state. Please take my view into consideration when deciding to classify Solar Panel users.

Thank you

Name of Utility Company: Idaho Power

Comment: Idaho Power's request for a separate rate class for people who generate electrical power from rooftop solar panels is clearly an attempt to punish individuals for taking action to help the environment and to generate new forms of revenue for Idaho Power.

Once this one type of separate rate class is allowed Idaho Power will not be content and will continue to create additional rate classes for other electrical consumer.

This represents pure greed on the part of Idaho Power and cannot be allowed.
