Name of Utility Company: idaho power

Comment: Idaho power has not demonstrated a greater demand by on site generation users. This is an attempt to recover costs for services that they get a benefit from. On site generation provides for a more stable grid by providing electricity either all more and some that would typically be used at the time the grid would be most vulnerable. The electricity is not traveling miles away in practical application it flows next door to the neighbor that does not have on site generation. Idaho power gets the benefit of not buying extra power. Instead they are seeing the writing on the wall, they are attempting to make on site generation impractical as to keep people from moving from their service. The IPUC should not allow Idaho power to change rates on on site generation. They should keep the same schedule as any residential/commercial customer as they only use what they can't produce. Typically at night when demand is low. This is the same energy they would use in they were still a residential/commercial user. As it stands now Idaho power makes demands to attach to the grid that adds extra expense to customers. They draw out the new meter head for another month with their 10 business day inspection and then afterwards another 15 days to install the meter. 25 days later (a whole billing cycle) they finally allow a customer to use their onsite generation. Idaho power is trying to have a monopoly when it comes to power instead of what is in the best interest for Idaho. Please don't let them pull the wool over your eyes and tell them the people won't stand for it.

Comment: To whom it may concern:

My name is Greg and I live in Mountain Home and I just installed Solar Panels last July. I installed the panels for two reasons: 1. To provide Green Energy; 2 To have a long term investment. If the credit I get for putting energy on the Idaho Power Grid is reduced significantly then the panels could become a worthless investment. Is this initial look at the costs and benefits of Customer produced energy also going to lead to an immediate change in energy credits? Or is Idaho Power just assessing at this point? Also, if credit reimbursement for Solar Panels energy is going to change is there going to be a public meeting to discuss the changes for the benefit of both parties(consumers and Idaho Power)? Thank you for your time.

Sincerely,  
Gregory Mortensen
