CASE NO. IPC-E-18-15

To Whom it May Concern,

With Idaho Power's commendable efforts towards clean energy in the State of Idaho, I encourage you to treat net-metering customers fairly and equitably.

If I make efforts to save water by limiting my irrigation, the City of Hailey does not increase my rates. If I drive a fuel efficient automobile, I don't pay extra at the pump.

Likewise, when I'm banking credits with Idaho Power, thanks to my solar system, I expect to receive full credit for that power in return.

Thank you for your time.

Sincerely,

Michael Wolter
541 Docs Hickory Dr.
Hailey, ID 83333

Comment: Why should homes generating alternative solar energy from the sun be penalized for using less electricity from Idaho Power?

Solar 'net metering' customers pay for any power they use from the grid, and they pay the same monthly customer charge like everyone else. If we generate extra power, we just want to be paid fairly for providing local, clean energy to our neighbors.

We have already invested money into our local economy by installing rooftop solar systems by supporting local jobs and workers. We are reducing the use of out-of-state fossil fuels and protecting our air quality. We should be rewarded for our efforts, not penalized!

Comment: I understand that home owners with solar panels should help pay for infrastructure, but I have not seen any study results showing how that is calculated for all rate payers. As Idaho Power moves towards renewable and sustainable energy production, homeowners willing to invest in that future via solar panels should be applauded and rewarded, not punished via higher rates when they do use electricity from the grid
