Comment_description: I am writing to voice my opposition to the Schwendiman wind farm proposal. Let me first say that I am not opposed to alternative sources of energy as long as they are efficient, and from a business standpoint productive and profitable. After much research I have discovered that Wind farms are only at best 20 percent efficient. I do not see how this can be productive or profitable. Allowing this proposal to go through would do nothing more than put an additional burden on the customers of PacifiCorp. Where there is another wind farm being built just a few miles from the proposed site I believe that the PUC should wait and see if Wolverine Creek Energy LLC proves to be profitable. Only then decide whether to proceed with any more wind farms. As a land owner that would border this proposed wind farm I am adamantly opposed to this project for a multitude of reasons. From a strickly business standpoint however, I believe that approving of this wind farm operation under any other criteria other than it meeting the 90/110 requirements would allow Schwedimans to develop a wind farm that would not be in the best interest to the customers of PacifiCorp.
