IDAHO PUBLIC UTILITIES COMMISSION

IDAHO PUBLIC UTILITIES COMMISSION

IN THE MATTER OF THE APPLICATION )  
OF ROCKY MOUNTAIN POWER FOR ) CASE NO. PAC-E-08-08  
APPROVAL OF AN ENERGY COST )  
ADJUSTMENT MECHANISM (ECAM). )  
\_\_\_\_\_ )

DIRECT TESTIMONY OF RANDY LOBB  
IN SUPPORT OF STIPULATION

IDAHO PUBLIC UTILITIES COMMISSION

JULY 31, 2009

1 Q. Please state your name and business address for  
2 the record.

3 A. My name is Randy Lobb and my business address is  
4 472 West Washington Street, Boise, Idaho.

5 Q. By whom are you employed?

6 A. I am employed by the Idaho Public Utilities  
7 Commission as Utilities Division Administrator.

8 Q. What is your educational and professional  
9 background?

10 A. I received a Bachelor of Science Degree in  
11 Agricultural Engineering from the University of Idaho in  
12 1980 and worked for the Idaho Department of Water Resources  
13 from June of 1980 to November of 1987. I received my Idaho  
14 license as a registered professional Civil Engineer in 1985  
15 and began work at the Idaho Public Utilities Commission in  
16 December of 1987. My duties at the Commission currently  
17 include case management and oversight of all technical Staff  
18 assigned to Commission filings. I have conducted analysis  
19 of utility rate applications, rate design, tariff analysis  
20 and customer petitions. I have testified in numerous  
21 proceedings before the Commission including cases dealing  
22 with rate structure, cost of service, power supply, line  
23 extensions, regulatory policy and facility acquisitions.

24 Q. What is the purpose of your testimony in this  
25 case?

1           A.    The purpose of my testimony is to describe the  
2 Stipulation (the Proposed Settlement) to establish an Energy  
3 Cost Adjustment Mechanism (ECAM) for PacifiCorp in Idaho and  
4 to explain the rationale for Staff's support.

5           Q.    Please summarize your testimony.

6           A.    Staff believes that the agreement to establish a  
7 PacifiCorp ECAM in Idaho is justified based on the  
8 volatility of power supply costs experienced by the Company  
9 in between rate cases and the current inability of the  
10 Company to adjust its rates in a timely manner to reflect  
11 that volatility. Staff believes the ECAM Settlement  
12 represents a reasonable compromise of the parties, is fair  
13 and reasonable and should be approved by the Commission. ¶3

14          Q.    Would you please describe the terms agreed to in  
15 the Settlement?

16          A.    Yes. The Settlement Stipulation establishes an  
17 annual Energy Cost Adjustment Mechanism to track deviations  
18 in variable power supply costs as they vary from normalized  
19 power supply costs embedded in base rates. ¶2 The parties  
20 agree that the ECAM will include a symmetrical 90%/10%  
21 sharing percentage. ¶5 The ECAM deferral period runs from  
22 December 1 to November 30 with an annual filing on February  
23 1 for an effective date of April 1 of each year. ¶6

24                In addition to establishing an ECAM, the  
25 Stipulation specifies that energy benefits of renewable

1 generation resources that are on line but not included in  
2 base rates will be tracked through the ECAM at a cost of  
3 \$55/MWh (Renewable Resource Adder) until completion of the  
4 next general rate case. ¶8 In exchange for the Renewable  
5 Resource Adder with the ECAM, the Company has agreed not to  
6 file a general rate case prior to May 1, 2010. ¶13 The  
7 Company has also agreed to conduct a Risk Management hedging  
8 seminar to educate all parties on the Company's risk  
9 management practices and hedging strategies. ¶12

10 Further, the Company has agreed to work with the  
11 parties to develop ECAM rates that reflect line losses and  
12 distinguish between transmission, primary and secondary  
13 voltage service. ¶11 Finally, the Stipulation provides for  
14 the 90/10% sharing of SO2 proceeds through the ECAM as a  
15 revenue credit (¶14) and a write-off by the Company of three  
16 regulatory liabilities that currently reduce revenue  
17 requirement. ¶15 These liabilities include the West Valley  
18 lease, A&G expense merger commitment and the gain on the  
19 sale of Goose Creek transmission. The parties agree that  
20 the remaining \$156,000 of unamortized liabilities will be  
21 credited to the ECAM deferral to benefit customers and will  
22 be written off upon approval by the Commission of the  
23 Stipulation.

24 All parties stipulate that the ECAM will be  
25 effective July 1, 2009, provided the Commission issues an

1 order approving the ECAM consistent with the terms of the  
2 Stipulation. ¶4

3 Q. What are the terms of the ECAM?

4 A. The proposed ECAM is very similar to the Power  
5 Cost Adjustment (PCA) mechanisms approved by the Commission  
6 for Idaho Power and Avista. The mechanism tracks four  
7 primary power supply accounts. They are: 1) Generation  
8 fuel expense, 2) Market purchase power expense, 3) Surplus  
9 energy sales revenue and 4) Variable transmission expense.

10 Actual net power supply costs above or below  
11 normal costs established by the Commission in a general rate  
12 case are identified on a system basis and then  
13 jurisdictionally allocated to Idaho. They are then shared  
14 90%/10% between the customers and the Company. In other  
15 words, the customers pay 90% of the above normal costs and  
16 the Company pays 10%. In credit situations, the customers  
17 receive 90% of the cost savings and the Company receives  
18 10%. ¶5

19 The mechanism compares normal and actual costs on  
20 a cost per kWh basis and includes a load growth adjustment  
21 to assure that abnormal power supply costs are not over or  
22 under collected as growth related load changes occur. The  
23 Load Growth Adjustment Rate (LGAR) is set at \$17.48 per Mwh  
24 to reflect the Commission approved production related costs  
25 embedded in rates. ¶7 The established LGAR reflects the

1 fact that the ECAM mechanism compares normalized power  
2 supply costs to actual power supply costs on a per kWh  
3 basis, thus reducing the impact of growing load.

4 Q. What other features are included in the proposed  
5 ECAM?

6 A. The proposed ECAM includes a carrying charge on  
7 the deferral balance equal to the interest rate on customer  
8 deposits. ¶9 The mechanism also includes a provision for  
9 discussing in advance with interested parties, ECAM rate  
10 changes that exceed 7% in a single year. ¶10

11 Q. What was the process leading to the Stipulated  
12 Settlement on the ECAM in this case?

13 A. The process leading to the ECAM proposed in this  
14 case began several years ago with conversations between  
15 PacifiCorp and the Staff regarding the possibility of such a  
16 mechanism in Idaho. The Company believed it only fair that  
17 it should be able to track its volatile variable power  
18 supply costs in between rate cases just as Idaho Power and  
19 Avista has for years. Staff maintained that the Power Cost  
20 Adjustment (PCA) mechanisms in place for these companies  
21 were designed to track variations in power supply cost due  
22 to variability in hydro conditions. Staff also maintained  
23 that such a mechanism was not financially necessary for  
24 PacifiCorp in Idaho because Idaho represented such a small  
25 portion of PacifiCorp's total system. Given Staff

1 opposition, PacifiCorp was not willing to formally request  
2 an Idaho ECAM.

3 Q. How did conditions change to allow an agreement on  
4 an Idaho ECAM?

5 A. The Company continued to informally discuss with  
6 Staff various methods of timely cost recovery including  
7 fixed and variable annual costs trackers as well as  
8 forecasted rate case test years. The Company pointed to its  
9 increased exposure to market electricity purchase/sales  
10 prices and the addition of new gas fired base load  
11 generation plants that increased its exposure to volatile  
12 fuel prices. In addition, the Company pointed to increasing  
13 coal price volatility, its fuel price volatility associated  
14 with a generation base that included 30% hydro, increasing  
15 wind generation and the implementation of ECAMs in other  
16 state jurisdictions in which it operates.

17 Staff informally agreed that these factors  
18 warranted consideration of a PacifiCorp ECAM in Idaho. On  
19 October 23, 2008, PacifiCorp filed its Application for an  
20 Idaho ECAM. Since that time, Staff and interested parties  
21 have further evaluated the need for the ECAM, considered the  
22 most appropriate ECAM methodology and assessed the likely  
23 impact of an ECAM on Idaho customers.

24 Parties to the case met formally on February 26,  
25 2009, May 11, 2009 and June 2, 2009, to conduct settlement

1 negotiations regarding the merits of an Idaho ECAM and how  
2 such a mechanism, if any, should be implemented. Other  
3 discussions were held with various parties to the case on  
4 January 5, January 15, February 17, March 4, and June 1,  
5 2009. The resulting Settlement Stipulation signed by all  
6 parties was filed with the Commission on June 29, 2009.

7 Q. Why does Staff support the Settlement establishing  
8 an ECAM mechanism for PacifiCorp in Idaho?

9 A. Staff supports the Settlement establishing the  
10 ECAM because it is now equitable to do so and as designed  
11 reasonably balances the interests of PacifiCorp (Rocky  
12 Mountain Power) shareholders and Idaho retail customers. As  
13 indicated earlier, PacifiCorp's resource portfolio has  
14 expanded to include a much larger portion of natural gas  
15 fired generation. The Company's portfolio also consists of  
16 30% hydropower and increasing wind generation. Given the  
17 variability of hydro generation and wind generation along  
18 with the volatility in natural gas and electric market  
19 prices, Staff believes the Company's variable power supply  
20 cost exposure is similar to that of other electric utilities  
21 that have PCAs in Idaho.

22 Q. What do PacifiCorp's Idaho retail customers get in  
23 exchange for an Idaho ECAM?

24 A. The proposed ECAM is designed to be symmetrical so  
25 customers benefit when variable power supply costs are less

1 than normalized costs included in base rates. However, the  
2 ECAM could have customer benefits even if variable power  
3 supply costs are above normal. For example, more timely  
4 recovery of variable power supply costs between rate cases  
5 may reduce the frequency of general rate cases. It may also  
6 reduce the need for a forecasted test year in general rate  
7 case filings. Finally, as more of the PacifiCorp state  
8 jurisdictions adopt ECAMs, borrowing costs should decline  
9 even in the face of increased infrastructure investment.

10 Q. Would you please expand on the potential for  
11 decreased borrowing costs?

12 A. Yes. The ECAM with the Renewable Resource Adder  
13 most importantly increases cash flows. Increased cash flow  
14 and increased earnings are a result of reflecting current  
15 operating conditions with a very timely ratemaking  
16 mechanism. For instance, the impact of the ECAM if in place  
17 for the 12-months ending December 31, 2008, would have been  
18 over 400 basis points or \$18 million in Idaho on a system  
19 net power cost differential of \$292 million.

20 This increased cash flow impact in Idaho combined  
21 with the impact from mechanisms in other states, improves  
22 financial ratios and will stabilize or possibly even improve  
23 rating reviews. Increased cash flows also results in lower  
24 borrowing requirements for capital additions. The  
25 adjustments for the Renewable Resource Adder and the

1 regulatory liabilities will also be viewed as positive by  
2 rating agencies. The ECAM Settlement, if adopted, will  
3 continue to identify Idaho as a state with favorable  
4 regulatory environment while being responsive, fair, just  
5 and reasonable to the Company and its customers. All of this  
6 in turn could result in improved ratings and lower borrowing  
7 costs with the benefit flowing to customers.

8 Q. You indicated that the proposed ECAM is very  
9 similar to the existing PCA mechanisms of Avista and Idaho  
10 Power. Could you please explain the similarities and the  
11 differences?

12 A. Once Staff believed an ECAM was justified for  
13 PacifiCorp in Idaho, Staff maintained that the operation of  
14 the ECAM should mirror that of existing PCAs. The terms of  
15 existing PCAs have all been approved by the Commission and  
16 have been in place for many years. Many of the proposed  
17 ECAM terms are identical. For example, the mechanism  
18 compares base net power costs for the same expense and  
19 revenue accounts established in the last rate case to actual  
20 net power costs incurred on a monthly basis. Like Avista's  
21 PCA, the difference is then accumulated in a deferral  
22 account with interest at the customer deposit rate for true-  
23 up once a year.

24 The proposed ECAM also contains a load growth  
25 adjustment calculated in a manner similar to that of

1 existing PCAs. Once the deferral amount is known, it is  
2 spread over the expected annual energy consumption for the  
3 next year. Any deferred amount over or under-recovered  
4 remains in the deferral account for subsequent true-up  
5 during the next ECAM period. Finally, the mechanism  
6 contains a 90%/10% sharing percentage as does the Avista PCA  
7 to align the interest of the Company and its customers and  
8 assure that power supply costs are as cost effective as  
9 possible.

10 Q. Are there any significant differences between  
11 existing PCAs and the proposed ECAM?

12 A. Yes there are a few. For example, the comparison  
13 between base power supply costs and actual power supply  
14 costs is made on a cost per kWh basis. Staff believes that  
15 comparing power supply costs on a kWh basis reduces the  
16 effect of load growth and limits the necessary size of the  
17 load growth adjustment.

18 The proposed ECAM also contains two elements of a  
19 temporary nature. The first element is that the ECAM will  
20 only apply to Idaho tariffed customers because Nu West and  
21 Monsanto are served under special contract approved by the  
22 Commission through 2010. (Duvall Direct pp 8, 9) Staff  
23 supports the exclusion noting that any Idaho jurisdictional  
24 power supply costs subject to recovery (or disbursement)  
25 through the ECAM will be prorated to remove power supply

1 costs associated with special contract load.

2 The other temporary provision is the Renewable  
3 Resource Adder. ¶8 This adjustment will be made to actual  
4 ECAM power supply costs until completion of the next general  
5 rate case. I will describe this provision in greater detail  
6 later in my testimony.

7 Q. Have you performed an analysis to estimate the  
8 effect of the ECAM on the Company's Idaho rates?

9 A. Yes. With the assistance of the Company, a back  
10 cast for the period January through May of 2009 was  
11 prepared. The period was analyzed to see what the effects  
12 of the ECAM would have been had it been in place.

13 Q. What observations would you make based on the  
14 results of the back cast?

15 A. The back cast showed the components of the ECAM  
16 and the amounts that accumulated over the five month period.  
17 It showed that the single largest deferral component, at  
18 approximately \$708,000, was the Renewable Resource Adder.

19 Q. What is the Renewable Resource Adder?

20 A. The Renewable Resource Adder is a temporary ECAM  
21 component that allows the Company to recover the fixed cost  
22 of new wind generation until those costs are included in  
23 base rates in the Company's next general rate case. The  
24 Renewable Resource Adder is an appropriate ECAM cost because  
25 the power supply cost benefits of new wind generation are

1 automatically captured in the ECAM. New wind generation  
2 reduces fuel costs and purchased power costs and increases  
3 secondary sales revenues. Requiring the Shareholders to pay  
4 the fixed costs while passing nearly all the benefits on to  
5 customers is an inequitable ratemaking practice. The  
6 Renewable Resource Adder is easily quantified in the ECAM at  
7 \$55/MWh and works to increase the deferral balance. The  
8 impact on Net Power Costs of these new wind resources is not  
9 easily quantified but is substantial and works to reduce the  
10 deferral balance. In fact it may entirely offset the  
11 \$55/MWh cost.

12 The second largest ECAM component is the Net Power  
13 Cost deferral at approximately \$373,000 after the load  
14 growth adjustment and 90/10 sharing.  $(583,000 - 168,000 \times$   
15  $.90 = 373,000)$  This amount increases the deferral balance  
16 in the five month review period in spite of the fact that  
17 new wind generation reduced these costs from what they  
18 otherwise would have been. Some possible explanations for  
19 this increase might be: higher fuel costs, higher market  
20 prices coupled with above normal market purchases and/or  
21 lower secondary sales volumes at lower market prices.

22 The other two ECAM components, SO2 credits and  
23 interest, amount to a few thousand dollars each. The total  
24 five month deferral would have been approximately \$1,072,000  
25 had the ECAM been in place during the first five months of

1 2009.

2 Q. What rate impact would the continuation of this  
3 ECAM deferral trend have on Idaho's tariffed customers?

4 A. If the back cast level of deferral continued for  
5 12 months the deferral amount would be approximately \$2.6  
6 million. The Company's current approved annual revenue  
7 requirement for tariffed customers is \$147.8 million. The  
8 rate increase would be about 1.8%.

9 Q. Could ECAM customer impacts vary significantly  
10 from your estimate?

11 A. Yes. The Company's actual power supply costs vary  
12 dramatically from year to year based on many factors.

13 Q. You have previously described several other issues  
14 identified in the Settlement document including ECAM start  
15 date, voltage level rate design, write off of remaining  
16 regulatory liabilities and a Company provided hedging  
17 seminar for interested parties. Why did the Staff agree to  
18 these terms?

19 A. Staff agreed to these terms as part of the overall  
20 negotiation process. The hedging seminar for interested  
21 parties will provide valuable information regarding the  
22 Company's hedging strategy and how it reduces risk. The  
23 agreement to write off three existing regulatory liabilities  
24 simply includes a \$156,000 credit in the ECAM now rather  
25 than continued amortization of these costs in base rates

1 after completion of the next general rate case.

2 An evaluation of voltage level rate design was an  
3 issue important to the large industrial customers that were  
4 parties to the case. Staff believes that an ECAM rate  
5 design that recognizes reduced line losses at high service  
6 voltages has merit and warrants consideration.

7 The ECAM start date of July 1, 2009 was an  
8 accommodation to show good faith in support of the  
9 Settlement. At the same time, it recognized Staff time  
10 constraints in filing supporting testimony. The only  
11 significance of the July 1 date is the recording of power  
12 supply cost deferrals. The recorded deferrals will not be  
13 subject to recovery should the Commission reject the ECAM  
14 Settlement.

15 Q. Does this conclude your testimony in this  
16 proceeding?

17 A. Yes, it does.  
18  
19
