Please describe your comment briefly:  
'Cedar Creek Wind Project'

I am writing this in regards to the Cedar Creek Wind Project in Bingham County, Idaho. I currently work for an Idaho based electrical contractor that will be contracted to construct part of the electrical system for the Wind Farm, if approved. I am a native of southern Idaho and look forward to the opportunity to participate in the construction of this wind farm as well as other fellow employees. This is an excellent example of how the renewable generation employs local labor and creates jobs. I believe that renewable energy is important to the overall energy system in the US. It is well deserved that Idaho take place with these type of developments to add to the economy. Please accept my support for the Cedar Creek Wind Project.

Sincerely,

Karl Studer

Please describe your comment briefly:

It is critical that we continue to support Green Power to set the pace and provide incentive for continued research and development of all forms of green energy to reduce our dependence upon coal and foreign oil. According to Rocky Mountain Power, the Cedar Creek Wind Project is skirting federal statutes by dividing their project into 5 smaller projects so that they come under PURPA requirements

Green power is green power no matter the size of the project. Rocky Mountain Power is grasping at straws to avoid paying a fair rate for the power generated by these wind project.
