Base Scenario Economic Forecast: Assumptions

In the Base Case Scenario of the Winter 2014 Idaho Economic Forecast it is projected that Idaho will continue to be an attractive environment for population and household growth. In the decade of the 1990s Idaho's population increased at an annual average rate of 2.5 percent per year. The national recession brought a significant slowdown in Idaho's job growth during the 2000 to 2010 period and a decline in the rate of population growth --slowing to an annual average rate of 1.9 percent per year over the decade. Nevertheless, that rate of population growth was higher than Idaho's annual average rate of natural population growth (births minus deaths) of nearly 1.0 percent per year indicating that Idaho continued to attract an in-migration of population even during tough economic times.

In the 2010 to 2040 thirty year forecast period it is anticipated that Idaho's population will increase by 808,400 persons reaching a total population of 2,380,000 by the year 2040 -- an annual average pace of 1.4 percent per year over the thirty year period. The number of households in the state is expected to increase at a slightly faster pace of 1.6 percent per year over the 2010 to 2040 period adding nearly 364,000 additional households statewide. Ada and Canyon counties are projected to capture the lion's share of the state's future population growth over the 2010 to 2040 forecast period. Ada county is projected see populations increase of 339,000 (144,200 households of the 2010 to 2040 period. Canyon county will take up 2nd place statewide with a projected population increase of 171,100 (a 68,400 increase in the number of households). In Eastern Idaho, Bonneville, Madison, Bannock, and Jefferson counties are expected to see increases in population of 54,200, 31,800, 21,600, and 19,800, respectively, over the 2010 to 2040 forecast period.

In the Base Case Scenario of the Winter 2014 Idaho Economic Forecast it is assumed that the state Idaho will continue to be an attractive environment for the immigration of new business firms. Therefore, in spite of the employment losses that the State has experienced in the recent economic downturn Idaho's industries regain some economic traction and continue to expand in the future. Total Non-Agricultural employment in the state is projected to increase by nearly 125,500 over the 2020 to 2040 period. Ada and Canyon counties will capture the majority of those job gains with non-ag employment projected to increase by 67,300 in the 2010 to 2020 period. In the longer term 2010 to 2040 thirty year period non-ag employment statewide is projected to increase by 286,000 - an annual average pace of 1.3 percent per year. Again, Ada And Canyon counties are projected to capture the lion's share of job growth over the 30 year period - 181,300 jobs or 63.3 percent of the project non-ag employment gains statewide. The counties along the Idaho Falls Lateral (Bannock, Bingham, Bonneville, Butte, Fremont, Jefferson, Madison, and Power) are projected to see non-ag employment increase by 55,200 over the 2010 to 2040 period - 19.3 percent of the statewide non-ag job gains. The Twin Falls area (Blaine, Camas, Cassia, Gooding, Jerome, Lincoln, Minidoka, and Twin Falls counties) is projected to experience an increase of 23,900 non-ag jobs over the 2010 to 2040 period -- 8.3 percent of the projected statewide gain in non-ag employment.

Differing from previous economic forecasts the manufacturing sector will not be the driver of economic growth in the state. Over the ten--year period 2000 to 2010 manufacturing employment in the state decreased by 17,200 jobs. It is projected that the state will regain 13,300 of those jobs in the 2010 to 2020 period. In the longer term manufacturing employment in the state is projected to increase by only 6,700 jobs in the 2010 to 2040 period - an annual average increase of 0.4 percent per year. Ada and Canyon counties are projected to capture 4,400 of those manufacturing job gains in the state. Most of those manufacturing job gains over the 2010 to 2040 period are expected to be in machinery and electronic equipment manufacturing. Over the period 1990 to 2010 food processing employment in Ada and Canyon counties had been increasing - largely on the strength of job gains in the dairy products manufacturing sector. In the forecast period it is expected that the dairy products manufacturing firms will continue to post job gains. At the same time it is expected that vegetable processing firms in Ada and Canyon counties will experience significant job losses over the 2010 to 2040 forecast period. The net effect of these trends in the food processing industry is that the food processing sector will not be a significant contributor to manufacturing job gains in Ada and Canyon counties. On the other hand the food processing industry is projected to be the main driver behind the projected gains of 1,300 manufacturing jobs in the Twin Falls area over the 2010 to 2040 period.

Employment in Idaho's Lumber and Wood Products manufacturing industry slipped in the last recession. Future job gains in the Lumber and Wood Products manufacturing sector is projected to be minimal over the 2010 to 2040 forecast period. Statewide employment in Stone, Clay, and Glass Products and Fabricated Metal Products manufacturing is expected to increase in proportion to population and household growth in the state. Employment in Idaho's Electronics and Machinery manufacturing sectors are expected to partially regain some of the jobs lost during the last recession. However, in the base scenario of the Winter 2014 Idaho Economic Forecast employment in these two manufacturing industries are not anticipated to recover to prerecession levels and no new electronics plants assumed in the 2010 to 2040 forecast period.

Employment in the Transportation, Trade, and Utilities industries is projected to increase by nearly 29,400 jobs over the 2010 to 2040 forecast period - an annual average percent increase of 0.7 percent per year. In general, employment in the Transportation, Trade, and Utilities industries is projected to increase at a pace that tracks the rate of population and household growth statewide. Over the 2010 to 2040 forecast period Ada and Canyon counties will capture 19,100 of the Transportation, Trade, and Utilities jobs in the state -- 65.0 percent of the projected job gains statewide. The counties along the Idaho Lateral are projected to see gains of 6,000 jobs in the Transportation, Trade, and Utilities industries -- 20.4 percent of the projected statewide gains in these industries.

Over the 2010 to 2040 forecast period employment in the Service industries are projected to be the sectors that will add the greatest amount of jobs. Professional and Business Services employment statewide is projected to increase by nearly 75,000 over the 30 year forecast period. Employment in Education and Health Services is projected to add 74,600 jobs statewide and the Leisure and Hospitality Services sectors are projected to add 35,900 jobs over the forecast period.

Even with the tight fiscal conditions that came with the last recession employment in the Government sector of the Idaho economy increased by nearly 9,700 during the 2000 to 2010 period. The economic forecast projects that government employment statewide will increase by another 9,700 over the 2010 to 2020 period. Thereafter the growth in government employment in the state will regain some momentum and increase by nearly 13,300 during the 2020 to 2030 period before slowing again in the 2030s. Over the thirty year forecast it is projected that government employment statewide will increase by nearly 31,300 - an annual average pace of 0.8 percent per year. Generally, the bulk of the increase on government employment will be in the state and local government area and largely be associated with the need for additional local government employees to provide basic services to a forecasted ever growing population in the state. It is again projected that Ada and Canyon counties will capture the majority (16,800 jobs) of the projected government job gains statewide over the 2010 to 2040 period.

High Scenario Economic Forecast: Assumptions

By the year 2040 the High Case Scenario forecast of population and number of households in Idaho is 11.3% higher the Base Case Forecasted figures. This represents nearly 268,600 more people in the State by the year 2040 and nearly 106,000 additional households. The projected gap between the High Case Scenario and the Base Case Scenarios widens by the years 2020 and 2030. In 2020 and 2030 the forecasted population of Idaho in the High Case Scenario is projected to be nearly 109,200 and 189,800 more, respectively, than that predicted in the Base Case Scenario. Similarly, the forecasted number of Idaho households in the High Case Scenario is greater than the Base Case Forecast by 41,200 in the year 2020 and 72,400 more than the Base Case in the year 2030. In the High Case Scenario it is projected that stronger employment gains statewide will be a magnet for a stronger rate of in-migration to the state.

In the High Growth Scenario of the Winter 2014 Idaho Economic Forecast it is assumed that the state Idaho will be a modestly more attractive environment for manufacturing firms. Therefore, in spite of the employment losses that the State has experienced in this economic downturn Idaho's manufacturing industries are expected to add an additional 2,600 jobs in manufacturing over the 2010 to 2040 forecast period when compared to the Base Scenario Forecast. It is assumed in the High Case Scenario that the Food Processing industry does not lose as many jobs as in vegetable processing facilities across the state, and that Idaho will attract a new electronics manufacturing plant in the Boise area that will employ nearly 2,000 persons. It is expected that employment in Lumber and Wood Products manufacturing, Transportation Equipment manufacturing, and Machinery manufacturing will not benefit from the stronger growth Idaho economy of the High Case Scenario.

Transportation, Trade, and Utilities employment in the High Case Scenario is projected to be nearly 9,700 jobs greater (6.4 percent greater) by the year 2040 than in the Base Case Scenario. The High Case Scenario increases in Transportation Industry employment are expected to occur in Idaho's air transportation sector. It is anticipated in the High Case Scenario that growth in air transportation employment in Boise will accelerate, and that a long-rumored regional air freight hub will be established at the Bose Air Terminal. In addition, a new airport for Wood River Valley will be completed. This new larger, and safer, airport facility will attract increased air transportation activity not only directly to the Wood River Valley but also indirectly with connecting flights to Boise. In addition, the Communications

and Utilities sectors are expected to see higher levels of employment in the High Case Scenario. In both the Communications and Utilities industries a large portion of this projected increase in employment is in reaction to faster population and household growth in the State of Idaho.

However, another component of this projected higher level of employment is the assumed continuation of the growth in the Communications industry's "call center" facilities in Idaho (T-Mobile, and others) and the continued expansion of independent electric power production facilities, including wind farms. Trade industry employment in the High Case Scenario is projected to be nearly 7,000 jobs (6.2%) greater by the year 2040 than in the Base Scenario Forecast.

Service industry employment in the High Case Scenario is projected to be even more robust than in the already strong outlook found in the Base Case Scenario. In the High Case Scenario the outlook for employment in the Service industries is projected to be nearly 23.800 jobs (7.8%) greater than the Base Case outlook by the year 2020, and 50,800 jobs (16.7%) and 60,600 jobs (19.9%) higher than the Base Case Scenario by the years 2030 and 2040, respectively. Again a large portion of this difference is due to the higher levels of population and household growth anticipated in the High Case Scenario. Hotel and motel accommodations and activities are also classified in the Service industry category. The High Scenario forecast assumes that tourism related or recreational travel in Idaho increases and as a result employment in the lodging and recreation sectors also increase. In the High Scenario forecast the shuttered Tamarack Resort is assumed to recover from its current state of closure and will flourish under a new future ownership.

The Service industry outlook in the High Case Scenario assumes that, there is a portion, roughly one-half, of the projected higher level of service industry employment that is caused by the relocation of firms new to Idaho. The Federal Reserve Bank of San Francisco speculates that a portion of the strong economic growth that is currently being experienced in Arizona, Nevada, New Mexico, Oregon, Utah and Idaho is due to an outmigration of population and businesses from California. Their studies have shown that many small California firms have to a realization that the cost of doing business in California has become too great for them to remain competitive. Therefore, an increasing number of these firms are making decisions to relocate close to, but outside of, California. Hence, the very rapid growth occurring in Nevada, Arizona, and to a lesser extent Southern Oregon. Currently, New Mexico, Utah, and Idaho are capturing only a small portion of that exodus. The High Case Scenario assumes that this trend continues and that Idaho, over time, captures a larger share of those relocation decisions.

Federal Government employment in the High Case Scenario is projected to be nearly unchanged from the Base Case Outlook by the year 2020 and 800 jobs greater after the year 2020. It is assumed in the High Case Scenario that the number of assigned personnel at Mountain Home Air Force Base will be about 2,000 higher than under the Base Scenario Forecast. The number of military personnel does not normally show up in the state's total employment figures.

It is further assumed that Mining industry employment in North Idaho's silver mines the High Case Scenario Forecast will be nearly 500 higher than the in the Base Case Scenario. In general, Construction, Natural Resources, and Mining industry employment in the High Case Scenario is expected to be nearly

1,800 jobs higher than in the Base Case. With the exception of the assumed gains in the Mining industry mentioned above this higher level of employment is in the Construction industry and is due to the projected higher level of population and population growth.

Low Scenario Economic Forecast: Assumptions

By the year 2040 the Low Case Scenario forecast of population and number of households in Idaho is 11.3 percent lower the Base Case Forecasted figures. This represents nearly 297,800 fewer people in the State by the year 2040 and nearly 128,500 fewer households. The projected gap between the Low Case Scenario and the Base Case Scenarios widens by the years 2020 and 2030. In 2020 and 2030 the forecasted population of Idaho in the High Case Scenario is projected to be nearly 130,600 and 282,500 fewer, respectively, than that predicted in the Base Case Scenario. Similarly, the forecasted number of Idaho households in the Low Case Scenario is lower than in the Base Case Forecast by 49,300 in the year 2020 and 109,300 fewer than in the Base Case in the year 2030. In the Low Case Scenario it is projected that slower employment gains statewide will attract a low level of population in-migration.

Idaho's Manufacturing employment in Low Case Scenario does not recover from the last recession over the 2010 - 2040 forecast periods.

In the Low Case Scenario the State's loss of jobs in the Food Processing industry accelerates and nearly 1,200 additional jobs are lost over the 2010 to 2040 forecast period. The potato processing plants in Southern Idaho would experience the bulk of these job losses. It is assumed in the Low Case Scenario that the JR Simplot plant in Caldwell would lose close to 1,000 jobs over the next five years. It is further assumed in the Low Case Scenario that the sugar processing plants in Southern Idaho would also feel increased pressure from competition and would find it necessary to close one of the sugar processing plants in Nampa, Paul, or Twin Falls, Idaho. The dairy industry and its associated food processing plants would reach a point where no further capacity could be added due to increased population and environmental pressures.

Employment losses in Idaho's Lumber and Wood Products manufacturing industry are assumed to accelerate in the Low Case Scenario. In this scenario the brunt of these additional losses would be felt in those portions of the wood products industry that could be increasingly vulnerable to low cost foreign produced products - the Wood Grain Molding plants in Fruitland and Nampa, Idaho.

Idaho's Electronics and Machinery manufacturing industries would experience further job losses over the forecast period. Employment in Stone, Clay, and Glass Products and Fabricated Metal Products manufacturing industries are both projected to be at lower levels of total employment than in the Base Case Scenario. In general, in the Low Case Scenario, Manufacturing industry employment in the year 2040 is nearly 5,800 jobs (9.7 percent) lower than in the Base Case Scenario forecast.

Transportation, Trade, and Utilities employment in the Low Case Scenario is projected to have nearly 4,200 fewer jobs (a change of -2.8 percent) by the year 2040 than in the Base Case Scenario. It is assumed that the lower overall economic growth inherent in the Low Case Scenario produces lower

levels of demand for transportation services and for the buying opportunities of additional Trade industry facilities. Also inherent in the Low Case Scenario is the assumption that the will be closure of some of the State's food processing facilities, which require large amounts of truck transportation.

Wholesale and Retail Trade industry employment in the Low Case Scenario is projected to be nearly 2,400 jobs lower than the Base Case Scenario Forecast in the year 2040. The difference in Trade industry employment is due to the lower levels of population and household growth found in the Low Case Scenario. Nevertheless, Transportation, Trade, and Utilities industry employment is expected to increase by nearly 15,000 over the 2010 to 2040 forecast period.

The forecasted Low Case Scenario of employment in the Finance, Insurance, and Real Estate sector falls is about 1,500 jobs lower than in the Base Case Scenario Forecast by the year 2040. Again, the difference is largely due to the lower levels of population and household growth found in the Low Case Scenario.

The outlook for the Service industry outlook in the Low Case Scenario assumes that employment growth in the Service sector slows with projected slower growth in population and the number of households statewide. Further, it is assumed that Idaho is less attractive to those Service industry firms from outside of Idaho that may have considered relocating all or a portion of their activities to Idaho. Idaho's competitive position for attractive new business is degraded and the nearby states of Utah, Oregon, and Nevada capture a larger proportion of firms making relocation and expansion decisions.

Future Government employment in the Low Case Scenario is projected to be 1.6% (16,200 jobs) lower than the Base Case Scenario forecast by the year 2040. As previously mentioned for other industries the reason for projected lower levels of Government employment in the Low Case Scenario is the slower rates of population and household growth in the Low Case. It is assumed in the Low Case Scenario that Mountain Home Air Force Base will maintain a level of activity that is similar to the present time.

APPENDIX G

Economic Survey, Letter and Distribution List

February 21, 2014

Commissioner (NAME)
(XX) County Court House
ADDRESS
CITY STATE ZIP

Dear Commissioner (NAME):

We appreciate and value the great working relationship we have with you and the other representatives of (XX) County.

In an effort to continue to increase our customer services and to assist us with our outlook for growth in your area, we are requesting that you share with us your insights as it relates to the (XX) County.

Enclosed is a questionnaire that will give us feedback from your specific jurisdiction on what you see economic development doing over the next several years.

If possible, we would like to have the completed questionnaire returned by the first of March. I have enclosed a postage-paid envelope for your convenience.

If you or your assignee have any questions, please do not hesitate to contact me at 208-468-XXXX.

Thank you in advance for your assistance.

Sincerely,

(NAME)
Manager, District XX
