The hub portion of the switch will interconnect with the public switched network on Signaling System 7 ("SS7") or Feature Group D ("FGD") facilities. The system's remote module capability will allow properties to be served in a manner that provides the exchange of appropriate signaling, control and calling/caller information to the network in accordance with network standards and specifications. Additionally, these services will be delivered over a combination of delivery mechanisms through incumbent local carriers' unbundled loop network, both copper and fiber and transport networks, as well as via BLC constructed facilities. Applicant intends to provide service upon certification and finalization of interconnection agreements with the LECs.
