Advice Letter No. ID-12-05

Ms. Jean Jewell, Commission Secretary
Idaho Public Utilities Commission
472 W. Washington Street
Boise, Idaho 83702

Re: Idaho Rural Exchange Carriers (IREC) Tariff Compliance for Case No. GNR-T-12-04,
Order No. 32534

Dear Ms. Jewell:

Enclosed are PDF versions of the proposed and the clean copy of the following tariff sheets filed with the Idaho Public Utilities Commission for the Idaho Rural Exchange Carriers (IREC) Tariff No. 3. This filing replaces in full the following original filings we previously made: 12-01, 12-01 Addendum, 12-02, and 12-04.

<u>Revised Tariff Sheets</u>	<u>Total Number of Sheets</u>
3rd Revised Sheet No. 1	
12th Revised Sheet No. 2	
2nd Revised Sheet No. 4	
1st Revised Sheet No. 5	
6th Revised Sheet Nos. 9 and 10	
4th Revised Sheet Nos. 11 and 12

ACCESS SERVICE

3. Carrier Common Line Access Service

Effective July 3, 2012, the Carrier Common Line Access Service Rates and Conditions will no longer apply for several companies that converted to the interstate rates and rate structure, but for other companies it will still be effective until further notice. This change is addressed in Case. No. GNR-T-12-04, Order 32534.

3.1 General Description

Carrier Common Line Access provides for the customer's use of the Company common lines for access to end users to furnish Intrastate Communications.

Carrier Common Line Access is provided when the customer obtains the Company Switched Access Service under this tariff.

3.2 Limitations

3.2.1 Exclusions

Neither a telephone number nor detail billing are provided with Carrier Common Line Access. Additionally, directory listings and intercept arrangements are not included in the rates for Carrier Common Line Access.

3.2.2 Access Groups

All line side connections provided in the same access group will be limited to the same features and operating characteristics.

All trunk side connections provided in the same access group will be limited to the same features and operating characteristics.

ACCESS SERVICE

5. Switched Access Service (Cont'd)

5.2 Rate Categories

5.2.1 There are four rate categories which apply to Switched Access Service:

- Local Transport.
- End Office (Local Switching).
- Carrier Common Line as described in Section 3.
- 800 Data Base Access Service.

5.2.2 Description of the Rate Categories

(A) Local Transport

The Local Transport provides the transmission facilities between the customer's premises and the end office switches where the customer's traffic is switched to originate or terminate the customer's communications.

Local Transport is a two-way voice frequency transmission path. The two-way voice frequency transmission permits the transport of calls in the originating direction (from the end user end office switch to the customer's premises) and in the terminating direction (from the customer's premises to the end office switch), but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

The new rate structure defined in Section 5 applies to those companies showing the Local Transport rate structure with Tandem Switched Transport and Direct Trunked Transport, which are the Flat Rates for Switched Access Local Transport.

ACCESS SERVICE

5. Switched Access Service (Cont'd)

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

The access minutes are billed at the Local Transport Rate Category, which includes Tandem Switching Transport. There are also Direct Trunked Transport and Multiplexing rates. This rate structure is described on Sheet Numbers 116.1 through 116.7.

(1) Direct Trunked Transport

The Direct Trunked Transport rate elements recover a portion of the cost associated with a communications path or circuits dedicated to the use of a single customer between:

- the serving wire center and an end office,
- the service wire center and a tandem,
- the serving wire center and a hub,
- a hub and an end office,
- the serving wire center and an ADM equipped wire center where add/drop multiplexing functions are performed,
- an ADM equipped wire center and an end office.

ACCESS SERVICE

5. Switched Access Service (Cont'd)

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(1) Direct Trunked Transport (Cont'd)

Direct Trunked Transport is not available: (1) from end offices that provide equal access through a Centralized Equal Access arrangement, or (2) from end offices that lack recording or measurement capability.

Normally, Direct Trunked Transport of originating 800 series calls from an end office is available only from Service Switching Point (SSP) equipped end offices. However, certain SSP equipped end offices cannot accommodate the direct trunking of the 800 series (other than the 800 service access code) service access code.

Three types of Direct Trunked Transport are available:

- Voice Grade 2 or 4 wire –
an analog channel with an approximate bandwidth of 300 to 3000 Hz;
- High Capacity DS1 –
an isochronous serial digital channel with a rate of 1.544 Mbps;
- High Capacity DS3 –
an isochronous serial digital channel with a rate of 44.736 Mbps.

ACCESS SERVICE

5. Switched Access Service (Cont'd)

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(1) Direct Trunked Transport (Cont'd)

High Capacity DS3 Direct Trunked Transport cannot be terminated at end offices that are not identified as hub offices that provide DS3 to DS1 multiplexing.

Additionally, DS1 Direct Trunked Transport cannot be terminated at end offices that are not identified as hub offices that provide DS1 to Voice Grade multiplexing or are not electronic end offices.

Direct Trunked Transport rates consist of a Direct Trunked Facility rate, which is applied on a per mile basis and a Direct Trunked Termination rate which is applied at each end of each measured segment of the Direct Trunked Facility (e.g., at the end office, tandem, hub, ADM equipped wire center, and serving wire center). When the Direct Trunked Facility mileage is zero, neither the Direct Trunked Facility rate nor the Direct Trunked Termination rate will apply.

The Direct Trunked Facility rate recovers a portion of the costs of transmission facilities, including intermediate transmission circuit equipment between the end points of the interoffice circuits.

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(1) Direct Trunked Transport (Cont'd)

The Direct Trunked Termination rate recovers a portion of the costs of the circuit equipment that is necessary for the termination of each end of the Direct Trunked Facility.

The minimum period for which High Capacity DS3 Direct Trunked Transport is provided is twelve months.

(2) Tandem Switched Transport

The Tandem Switched Transport rate elements recover a portion of the costs associated with a communications path between a tandem and an end office on circuits that are switched at a tandem switch.

Tandem Switched Transport rates consist of a Tandem Switched Facility rate and a Tandem Switched Termination rate.

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(2) Tandem Switched Transport

- (a) The Tandem Switched Facility rate recovers a portion of the costs of transmission facilities, including intermediate transmission circuit equipment, between the end points of interoffice circuits. The Tandem Switched Facility rate is applied on a per access minute per mile basis for all originating and terminating minutes of use routed over the facility.
- (b) The Tandem Switched Termination rate recovers a portion of the costs of circuit equipment necessary for the termination of each end of each measured segment of the Tandem Switched Facility. The Tandem Switched Termination rate is applied on a per access minute basis (for all originating and terminating minutes of use routed over the facility) at each end of each measured segment of Tandem Switched Facility (e.g., at the end office, host office and the access tandem). When the Tandem Switched Facility mileage is zero, neither the Tandem Switched Facility rate nor the Tandem Switched Termination rate will apply.

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(3) Multiplexing

Multiplexing provides an arrangement for converting a single, higher capacity or bandwidth circuit to several lower capacity or bandwidth circuits.

When a derived channel is itself multiplexed to derive additional channels with a lesser capacity, this is referred to as cascade multiplexing. When cascade multiplexing occurs, a charge for the additional multiplexing function applies. When cascade multiplexing is performed at different hubbing locations, Direct Trunked Transport charges also apply between the hubs.

The following multiplexing arrangements are offered for use with Switched Access Service.

- (a) DS3 to DS1 Multiplexing charges apply when a High Capacity DS3 Direct Trunked Transport is connected with High Capacity DS1 Direct Trunked Transport. The DS3 to DS1 multiplexer will convert a 44.736 Mbps channel to 28 DS1 channels using digital time division multiplexing.

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(3) Multiplexing (Cont'd)

- (b) DS1 to Voice Grade Multiplexing apply when a High Capacity DS1 Direct Trunked Transport is connected with Voice Grade Direct Trunked Transport. However, a DS1 to Voice Grade Multiplexing Charge does not apply when a High Capacity DS1 Direct Trunked Transport is terminated at an electronic end office and only Switched Access Service is provided over the DS1 facility (i.e., Voice Grade Special Access channels are not derived). The DS1 to Voice Grade multiplexer will convert a 1.544 Mbps channel to 24 Voice Grade channels.

ACCESS SERVICE

5. Switched Access Service (Cont'd)

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

The Company will work cooperatively with the customer to develop routing and other local transport arrangements.

(4) Interface Groups

Ten Interface Groups are provided for terminating the Local Transport at the customer's designated premises. Each Interface Group provides a specified premises interface (e.g., two-wire, four-wire, DS1, etc.). Where transmission facilities permit, the individual transmission path between the customer's designated premises and the first point of switching may at the option of the customer be provided with optional features as set forth in (2) following. The interface groups described in Section 9 and the optional features described in (2) following are non-chargeable features. No additional charges other than the rate for Local Transport apply.

5.2 Rate Categories (Cont'd)

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(4) Interface Groups (Cont'd)

As a result of the customer's access order and the type of Company transport facilities serving the customer's premises, the need for signaling conversions or two-wire to four-wire conversions, or the need to terminate digital or high frequency facilities in channel bank equipment may require that Company equipment be placed at the customer's designated premises. For example, if a voice frequency interface is ordered by the customer and the Company facilities serving the customer's designated premises are digital, then the Company channel bank equipment must be placed at the customer's designated premises in order to provide the voice frequency interface ordered by the customer.

Technical specifications concerning the available interface groups are set forth in Section 9.

(A) Local Transport (Cont'd)

(5) Non-Chargeable Optional Features

Where transmission facilities permit, the Company will, at the option of the customer, provide the following non-chargeable optional features in association with Local Transport.

(a) Supervisory Signaling

Where the transmission parameters permit, and where signaling conversion is required by the customer to meet its signaling capability, the customer may order an optional supervisory signaling arrangement for each transmission path provided.

(b) Customer Specified Entry Switch Receive Level

This feature allows the customer to specify the receive transmission level at the first point of switching. The range of transmission levels which may be specified is described in Technical Reference TR-NWT-000334. This feature is available with Interface Groups 2 through 10 for Feature Groups A and B.

5.2.2 Description of the Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(5) Non-Chargeable Optional Features (Cont'd)

(c) Customer Specification of Local Transport Termination

This option allows the customer to specify, for Feature Group B routed directly to an end office or access tandem, a four-wire termination of the Local Transport at the entry switch in lieu of a Company selected two-wire termination. This option is available only when the Feature Group B arrangement is provided with Type B Transmission Specifications.

(B) End Office (Local Switching)

The End Office (Local Switching) provides the local end office switching and end user termination functions necessary to complete the transmission of Switched Access communications to and from the end users served by the local end office. The End Office Rate category includes four types of functions included in the Local Switching rate elements: Common Switching, Transport Termination, Line Termination, and Intercept.

(1) Local Switching (Cont'd)

(b) Transport Termination

Transport Termination functions provide for the line or trunk side arrangements which terminate the Local Transport facilities.

The number of Transport Terminations provided will be determined by the Telephone Company.

(c) Line Termination

Line Termination provides for the terminations of end user lines in the local end office. There are two types of Line Terminations, i.e., Common Line Terminations and Special Access Service Terminations utilized in the provision of WATS or WATS-type services at Telephone Company designated WATS Service Offices.

(1) Local Switching (Cont'd)

(c) Line Termination (Cont'd)

The Special Access Service Terminations are differentiated by line side vs. trunk side terminations. In addition, there are various types of originating and terminating line side terminations depending on the type of signaling associated with the Special Access Service. Line side terminations are available with either dial pulse or dual tone multifrequency address signaling.

(d) Intercept

The Intercept function provides for the termination of a call at a Telephone Company Intercept operator or recording. The operator or recording tells a caller why a call, as dialed, could not be completed, and if possible, provides the correct number.
