Comment_description: As a metered user on a fixed income (retired) this proposed rate increase is unfair for two reasons. First, reducing the summer rate to only 8000 gallons while the winter rate is 15000 is just backwards and is nothing but price gouging of customers who are required to maintain a healthy lawn (homeowner covenants and county regs against weeds etc). Secondly, until ALL customers are metered there can never be a fair and equitable rate structure. I would insist on metering all customers before any rate increase be considered. Thank you
