Please describe your comment briefly:

Since I am a resident of Teton Springs who is currently suffering from heavy metal toxicity, I am kindly requesting some information on who is accountable for water quality within the subdivision. The reason for my concern: over the last several winters, Teton Springs has allowed the temporary operation of commercial heli-skiing from within the subdivision. This year, the heli-skiing company is seeking a permit to make the operation permanent. The flights that occur fly over residential homes and the many ponds and streams within the development. (Located in the vicinity of the flight path are the headwaters of the Teton River). A refueling truck is also left onsite. I have sent an email to Teton Springs Golf and Casting asking them for their storm water management plans, but its been several weeks and no response. So, I'm seeking your assistance to ensure the water quality for Teton Springs will not be contaminated & thus degraded by accumulating mercury from the combustion of the helicopter's jet fuel. In my opinion, this may not only affect the health of Teton Springs residents, but also the health & environment of the entire Teton Valley. (Side notation: Teton Springs contains some fly fishing ponds. From what I have heard at HOA meetings, they have experienced some difficulties in maintaining their fish population). Thank you for your assistance in this matter.

Please describe your comment briefly:

What are the risks to the utilities' water quality given the application of a commercial helicopter operation in Teton Springs?. The heliport proposal includes storage of jet fuel above ground in an unsecured tank truck without a containment structure. Does the EPA need to review the potential environmental impact for this 750 acre development?

Please describe your comment briefly:

The current Teton Springs water, right out of the tap, is poor in taste quality. What can be done about this problem?
