

To the Commissioners of the Idaho Public Utility Commission

We the undersigned are owners and/or residents of the Brian Subdivision and receive drinking water through the Brian Subdivision Water Users Association. Our board has worked long and hard to identify appropriate methods to eliminate nitrate contamination from our water and has concluded the only reliable and cost effective way is to connect to United Water's distribution system. Our system (like our subdivision) is older and upgrading the various components is neither cost effective nor likely to produce safe drinking water for the long-term. While we might prefer to keep our independent water source and distribution system, we believe interconnection with United Water is the only reliable option to protect our health. We love our subdivision and hope to enjoy many more years of healthy living if only we can gain access to reliably healthy drinking water. Please rule favorably and quickly for our subdivision. We have been tolerating contaminated water for over two years. The prior owner could not afford to fix the problem. The solution at hand will create hardship for some of us, but we have no choice. We need you to help us make safe drinking water a reality soon.
